

## **Part A: Tsunamis**

### **A1—Shells line no shells illustration**

All around the world, we find occasionally find un-fossilized sea-shells that are strangely in places miles inland and up to about 80 feet above sea level. I collected 141 of these shells from places in San Diego and Los Angeles.

### **A2—carbon dating data**

Then I sent the shells for carbon dating at a cost of about a hundred and twelve thousand dollars. Here is one of the test result pages.

### **A3—pie graph shells**

The carbon dating showed that 83% of the shells were between 200 and 6,300 years old.

### **A4—Tsunami timeline**

The carbon dating also revealed date clusters which are shown in this timeline. Thus Southern California appears to have suffered 15 large tsunamis in the last 5100 years. The last tsunami being in around 1700AD.

If we divide the 48-hundred-year period between these tsunamis into 14 parts, we get an average interval of three hundred and 43-years

This is similar to the intervals seen in Washington state and the nation of Chile, where scientists used tree rings and sediment layers to date tsunamis.

### **A5—Shells line no shells illustration**

Now I especially looked for shells in high places... and I occasionally found them in places up to about 80 feet above sea level in Southern California.

But I couldn't find any shells above this elevation.

So it appears that the shells were not from human activity, but deposited by tsunamis.

After all: why would humans only throw away shells always close to sea level, but often many miles inland?

### **A6—Post glacial sea level chart**

Now if you are thinking that the shells were from a time where sea levels were higher, that can't be.

The age of the shells combined with historical sea level data contradicts this idea.

The last time sea levels were higher than today — was about 110,000 years ago, and the shells we find

are all mostly from the last 6,300 years.

Also, the age of the shells matches up fairly perfectly with the plateau in sea levels shown on this graph. Before this time, the planet was still in an ice age, and sea levels were lower.

So a few centuries before 6,300 years ago, tsunamis struck places that are today offshore in the ocean. And this is why we don't find many un-fossilized shells high up on land that are more than 6,300 years old.

### **A7—Shells line no shells illustration**

Using seashells to date tsunamis offers a BIG advantage over using sedimentation and tree rings alone. With seashells we see exactly how high the waters got for each tsunami in each location. The tree rings give us precise dates, and the shells tell us how high each tsunami got in each specific location.

### **A8—Map Point Loma**

So for example, in Del Mar valley, where the shape of the coastline DOES NOT funnel the tsunami waters, the seashells and tsunami flood waters only seem to get about 30 feet above sea level. But around San Diego harbor, where the coastline DOES funnel the tsunami waters, we find seashells in places up to about 70 feet above sea level.

### **A10—57' waters in Japan**

Now it should be noted that a 70-foot inundation of San Diego harbor is no higher than we saw in the recent Japan tsunami of 2011.

### **A10B Water culminated**

Here's a town that suffered 66-foot flood waters. a town that was completely washed off the map.

### **A11 Minami-Sanriku**

And in the 20–11 tsunami, the run-up maximum, the highest level the waters reached was 127-feet above sea level... at a place called Miyako Iwate.

### **A12—Map Point Loma**

So with San Diego Bay, it seems that the hilly Point Loma peninsula... which points south in this image... acts as a tsunami funnel or scoop for waves arriving from the southwest. And this is why San Diego bay experiences floods as high as 70-feet. The waves get funneled, and this increases their height.

### **A13—Palos Verdes**

In Los Angeles, the Palos Verdes peninsula forms a tsunami funnel, like the Point Loma peninsula does for San Diego. Although in Los Angeles, the tsunami funnel seems to be bi-directional... So it works for

tsunamis arriving from both the west and southwest.

This is why we easily find shells miles inland in Los Angeles. For example, some of my carbonated shells came from the intersection of Slauson and Sepulveda, just east of the 405 freeway, and about 3 miles inland.

#### A14—Banda Ache

Is it really so hard to believe that much of low-lying coastal California will one day be washed away by a giant tsunami... washed away like in Banda Ache shown here. A quarter million people died in this disaster.

And look at the edge of the tsunami wash area behind the helicopter. Look at how well it matches the topography. So we are probably looking at the cause of this sort of topography... this type of buried-hill coastal-plane that exists in many places around the world, Places like California.

#### A15—Japan wash picture

And is it so hard to believe that much of coastal California will one day be washed away... washed away like in Japan shown here. Over 20,000 people died in this tsunami... a tsunami that hit a sparsely populated part of Japan. A place with nearby hills to run to... and a place that holds regular tsunami drills.

Also, look at how the tsunami wash area shown here so perfectly matches the edge of the buried-hill coastal-plane. And there are coastal features like this all up and down the coast of California. And now everyone can read the geology.

#### A16

**La Cienega = La Cien Agua = the century water**  
CIEN•AGA is the Spanish word for swamp. So La Cienega Boulevard literally means THE SWAMP ROAD.

And CIEN•AGA looks like CIEN AGUA, which looks like CENTURY•WATER. Thus La Cienega boulevard looks like CENTURY WATER BOULEVARD... or tsunami danger-zone road.

#### A17—La Cienega/405 map

And La Cienega boulevard does run roughly parallel to the coast... about 3 to 6 miles inland. On this map, La Cienega boulevard is the thin red line running vertically past the A in Los Angeles before it disappears under the 405 freeway, which was built over much of it.

So La Cienega boulevard seems to mark the flood zone from the last century flood, or 350-year

tsunami, or whatever we are going to call it. And La Cienega boulevard is strangely, very strangely, near Century boulevard and the Century freeway. Also strange is how the routing of La Cienega was greatly changed over the years.

#### A18—LA topo

And what of the name Los Angeles, the city of Angels? Perhaps this came from the Native American term for THE SPIRITS of the poor people who died in the last tsunami? Perhaps the name Los Angles actually means something like tsunami graveyard, or the place where many people once died in a tsunami.

And nearby La Jolla does sounds like Los Hoyos, which ALSO means graveyard in Spanish.

#### A19—BKK tsunami funnel

Bangkok Thailand is also in a tsunami funnel... in fact, it is dead center in a GIANT funnel, a funnel maybe 700 miles across depending on how we measure it. And the Thai name for Bangkok, ALSO means city of angels, just like Los Angeles.

A couple centuries ago, the Thais moved their capital from the safe hills of Chiang Mai into the Jaws of death in Bangkok. Why on earth did the Thai king do this? And how did the Thais forget that this place was once named tsunami graveyard?

Today, Bangkok is ten times the size of the next largest city in Thailand... and it completely dominates Thai culture. So if a tsunami were to strike, only the provincials, the country bumpkins would survive in Thailand. The smartest people of the nation would mostly all be killed off, just like in California, where the richest neighborhoods are all mostly near the beach.

#### A20—Bangladesh

The nation of Bangladesh is also in a giant tsunami funnel... one maybe 900 miles across. And this low-lying nation, barely above sea level, is shaped just like a tsunami wash area. So it appears that there was a giant flood, and the Hindu Indians didn't want to settle in this place afterwards.

So the Muslims from the desert land of no resources moved there and laid claim instead... right in the jaws of death. And this is how a low-lying Islamic enclave came to exist completely surrounded by Hindu India.

#### A21—Djibouti

Djibouti is another nation at the end of a tsunami funnel that looks like a tsunami wash area. It also another Muslim enclave surrounded by people of another religion. At least it was initially. Apparently the Christians of Ethiopia didn't want to settle in this place after the last tsunami, so Muslims settled there instead... right in the jaws of death.

Now the people living in Bangladesh and

Djibouti, pay Islamic taxes to Arabia, to the desert land of no resources except apparently cleverness, treachery and desperation.

#### A22—Beijing

The Chinese provinces of Bei·jing and Tian·jin are also at the end of a giant tsunami funnel one perhaps 500 miles across, depending on the direction of the wave. And the combined shape of these two provinces is quite reminiscent of Bangladesh and Djibouti... so they also look like the area wiped out by a past tsunami.

#### A23 China province map

And look at the way Bei·jing and Tian·jin are surrounded by Hebei province. Isn't it just like how Bangladesh is surrounded by Hindu India? Isn't it just like how Djibouti is surrounded by Christian lands?

And look at how Beijing, Tianjin and Shanghai are strangely much smaller than the other provinces of China.

#### A24 China topo map

Right after a tsunami, nobody wants the devastated areas. So Arab refugees, or harem bred ex-hodos will frequently move there and simply lay claim. Or maybe they buy the devastated lands for a pittance. Maybe they buy the whole graveyard location for 24 dollars worth of beads or something like that.

Then over many generations they struggle to turn their worthless jaws of death location into valuable urban real estate. For example, in China, they eventually got the government to accept their tsunami lands as the nation's Beijing, which means "Northern Capital".

And then the Arabs sell this jaws of death land for huge profits... for centuries afterwards really Anyway, it's just worthless infidels that don't believe in the religion of feeding the Arabs.

And Seoul is in the same tsunami funnel. Strange how the Koreans think that the hills are for poor people, and everyone else is supposed to live in flat places vulnerable to the next tsunami.

#### A25—Japan tsunami damage, hills spared

Strange how land is so famously scarce and

expensive in Japan, but the Japanese don't normally build on their safe hills. They only run to the hills when tsunamis strike... that is if they can make it in time.

#### A26—Map New York funnel

Strange how New York City is in a tsunami funnel with a mouth up to 130 miles across. Strange how we find seashells all over New York City. Strange how Manhattan's bedrock is so famously shallow. I mean, you would think that a low lying island at the mouth of great river would be covered in river sediments... wouldn't you?

Perhaps tsunamis wash the sediments away periodically. And perhaps New York City, the world's capital is located in a tsunami funnel, like some modern-day Atlantis or Atlantic civilization.

#### A26B Local search: Moving-all-the-people

And you of the Mideast  
This is the very message  
that your people  
are struggling to bring about

#### A27—Map Washington

Strange how Washington DC. Baltimore and Philadelphia, are in tsunami funnels... that is if we ignore the outer sand bars that are easily overrun.

#### A28—Map Boston

And Boston is right at the throat of a mid-sized tsunami funnel too.

#### A29—Shanghai by the sea

And here is Shanghai, barely above sea level and sticking out into the ocean on a peninsula.

#### A30—London by the water

Isn't it remarkable how MOST of the world's MOST important cities just HAPPEN to be located in some sort of low-lying tsunami funnel? To the places already mentioned, we can add London, Tokyo, Guangzhou, Osaka, Nagoya, Bombay, Amsterdam, Singapore, Karachi, Hamburg, Copenhagen, San Francisco, Seattle, Melbourne, Buenos Aires, Jakarta, Calcutta, and many more. It simply can't be a coincidence.

#### A33—British funnel

How can mankind be so dumb as to put it's biggest and most important cities in places where we easily find seashells?

The smartest people in the world live in these low-lying cities. What would become of humanity if it's greatest cities were wiped out? What would become of humanity if the smartest people were removed from the flock?

And is all our stupidity by dumb accident? Or is it to make sure that as many smart infidels as possible die in the next global tsunami? Maybe we have all under-estimated the Arab house of war, it's ancient-ness, it's persistence, and its treachery.

#### A33B Nuclear reactor cut into slope

I mean, look at the way the San Onofre nuclear power plant was cut down INTO the ground by maybe 60-feet...

Now it's much more vulnerable to tsunamis like the Fukushima reactor.  
Is this just a dumb accident,  
or have we been corrupted and sabotaged  
by a bunch of oil sellers  
who both hate nuclear power  
and want kill as many infidels as possible.

#### A34—17 Seafloor age in color

This illustration shows the age of the Ocean floor and the long-term average rate of seafloor spreading. Look at the view of the planet in the lower left corner, the view that is looking up at the south pole.

Look at how the Australian plate is moving northeast in the direction of the Bearing Straight. This is one of the most active parts of the seafloor and the rate of movement is about 11 meters per century.

And look how the Ant-arctic plate is moving towards South America and the At-lantic Ocean at a similar rate. And look at how this movement has compressed the seafloor into a loop between the southern tip of South America and the Ant-arctic peninsula.

#### A35—18B Plates and movement

The movements of Australia and Antarctica are widely accepted by the scientific community. In fact, the long term average rates of seafloor spreading have even been quantified... as you can see from this textbook illustration.

But when do these continents move? Because over the past few centuries, we haven't recorded any significant movements. So the movements must be big but infrequent.

#### A36—wave paddle art

Also, when Australia and Antarctica move, it is not the seafloor sliding horizontally UNDER a giant stationary continent as we saw in Indonesia and Japan recently.

When these move, it is a continent lurching sideways... and sliding OVER the seafloor and acting as an giant wave paddle. So the tsunami produced is much larger.

#### A37 Seafloor age in color

When Australia moves, the Pacific and Indian Oceans suffer a massive tsunami, especially east Asia and the Bay of Bengal. And when Antarctica moves, the Atlantic or Atlantis Ocean suffers an even bigger

tsunami.

The Atlantic tsunamis are more destructive because of the narrow channel-like shape of the Atlantic Ocean. This keeps the wave from diffusing like in the Pacific Ocean. In fact, the wave actually compresses and grows a bit in the Atlantic or Atlantis Ocean. And this is why we easily find seashells over 100 feet up on the southern cliffs of Portugal.

#### A38

##### Plato Timaeus 22

"Our records [in the Mideast] are the oldest. ...Since ancient times, we have preserved a written record of any great achievement or notable event which came to our attention. This whether they occurred in our part of the world, or anywhere else. By contrast, almost everyone else has barely developed writing and the other basics of civilization, when the periodic [tsunami] flood strikes, sparing nobody but the illiterate and uncultured" [those living outside the major tsunami-prone cities].

This text is from the famous ancient Greek author Plato, or in some languages pull a ton. It's from the Timaeus dialogue, section 22. The words were supposedly written 2,400 years ago. It is supposed to be an Egyptian, and Arab saying these words. <[read>](#)

#### A39

##### Plato Timaeus 22

"The result is that your people have to begin again like children with no knowledge of what happened in any part of the world, in early times. So these histories of your people which you were just talking about —they are little more than children's stories."

#### A40

##### Plato Timaeus 22

You remember only one [tsunami] flood, though there have been many. And you do not know that the best race of men that ever existed, lived in your country. You and your fellow citizens are descended from the few [hillbilly yokels] that survived. And you know nothing about it because [We saw to it that] many generations left no record."

[So it looks like some ancient civilization has been helping the outside world to locate their important cities in tsunami funnels. Which ancient civilization is that? Maybe it's the ancient civilization that has repeatedly sent it's own people to colonize nearby tsunami wash areas.]

#### A41 OPEC logo

You know, the OPEC logo perfectly describes the Arab attitude about the outside world ... especially the worthless infidels that don't follow the religion of feeding the land of no resources.

#### **A42—Ache mosque aftermath**

And you know, judging from Banda Ache, a totally orthodox part of Arabia's empire, even the true believers are pretty darn expendable... that is if they are not the chosen ones in the floating part of the pyramid.

#### **A43—Tsunami timeline**

New Subject... We should be trenching tsunami gulfs and valleys around the world... noting the location and elevation of the shells we find. When we carbon date enough shells, we'll have a worldwide tsunami history, one going back for about 7,000 years.

#### **A44—Ache mosque aftermath**

Simo(n), C. Y. M. O. is the Greek word for wave. And the study of tsunami history will now be called CYMOLOGY, as opposed to seismology, the study of earthquakes.

Soon, our global CYMOLOGY survey will show how often each coastline suffers from tsunamis and how high the floods go. It will also tell us which areas are safe, and which areas are not.

And because we can use this tsunami data to model earthquakes, it will also give us a 7,000-year picture of large ocean earthquakes, a picture going back to the end of the last ice age.

Also, isn't it remarkable that this mosque was the only building standing after the Ache tsunami? You know I don't take this as evidence of divine protection. I take it as evidence that the Arabian leadership of their slave's religion KNEW perfectly well

that there would eventually be another tsunami. So they built accordingly.

This way, their real estate scheme would be more likely to recover and regrow a new tax-paying, and rent-paying slave city after the next tsunami. This way, later generations in the totally desperate land of no resources would have another place to send their worthless unchosen harem spawn...so as to get rid of them.

#### **A45—New York by the sea 9/11**

New Subject, New York City, the capital of the world, is in a tsunami funnel. And most parts of the city are less than 20 feet above sea level. And there are unfossilized seashells to be found all around New York City.

How can we be so foolish as to build our houses upon the sand in a place where seashells are to be found?

#### **A46—Ache wash photo**

You know, there are ancient flood legends from many cultures all over the world. And there are ancient warnings about building houses upon the sand ... warnings that seem to be about living in a tsunami zone.

But strangely, these valuable ancient legends about tsunamis floods have been garbled and blurred away with talk of rain and **wind**. In fact... rain and wind are mentioned twice in Matthew 7:24.

And by the way, it's mouth-you 7-24. So someone wants this section mouthed up or talked up 7-days a week, 24 hours a day.

And you know... this is on page 3 of the New Testament... in the most read part. So it seems the people blurring-away the old legend wanted their new version to be heard by as many people as possible.

#### **A47—tsunami coming ashore**

And you know, the legend of Noah's Arc is on page 3 of the Old Testament, again in the most read part.

With the legend of Noah's Arc, the worldwide flood was not from a giant tsunami. It was supposed to be from 40-days and 40-nights of rain... and this supposedly raised sea levels and flooded the entire planet. But this is an ridiculous idea, isn't it? I mean, everyone knows that rainwater just flows back into the oceans. How could any amount of rain raise sea levels? ... This is a ridiculous idea.

#### **A48—tsunami wash area**

You know, both the old testament and the new testament come from the Middle East. And both of these books were created by Middle Eastern people. And both of these books have page-3 legends that hide or blur-away the true risk of large global tsunamis.

#### **A49 — Moses with tablets**

I guess we all know how the Arabians have a reputation for deception and treachery. You know, like in Ali Baba and the 40-thieves... and Aladdin and Osama bin All•add•in.

Perhaps it is unwise to have total unquestioning faith in ANYTHING ANYONE from the Mideast EVER said... no matter how old and how revered it is. And perhaps the best way to hide great evil is to cloth it in great goodness.

#### **A50—Lisbon funnel**

New subject. Focus on the word LIS like in Lisbon Portugal... a city in a small tsunami funnel... but still a funnel that magnifies the wave by more than ten-fold.

Eng. **LUSH LUSCIOUS** = watery or juicy

Eng. **LUSTER** = wet sheen

Eng. **LUSTY** = wet

Gr. **LUSIS** = dissolving or loosening

Eng. **LIXIVATE** = to dissolve what can be dissolved

Eng. **LICK** = to dissolve with the tongue

Eng. **LOZENGE** = a tablet dissolved in the mouth

Here we see what the word LIS originally meant. It

means the wet part, or wet aspect of a thing, or the part that can be washed out, or the wetting or dissolving of a thing

#### A50—Lisbon funnel

So LIS•bon sounds like it means dissolve-good. And the nation of Portugal was previously called Lusitania... or LYSE•it•ania... which sounds like dissolve-it-again, or wash and again.

#### A51 - Lisbon old city map

Anyway, in 1755, a 60-foot tsunami hit LYSE•bon, killing 40,000 people. The area north of Praca do Commercio, the area with a grid-iron street layout at center of the city, that was completely washed away... Just like in Banda Ache.

Now there was this famous theatre play called Candide that came out just after the tsunami.

And this play is commonly presented first in classic literature anthologies and textbooks.

And this play repeatedly calls the Lisbon tsunami as an earthquake. So clearly the tsunami propagandists are a powerful bunch if they can get their propaganda called classic literature.

#### A52B Apocalypse = epochal lyse

And isn't it strange how we say apocalypse instead of Epochal lyse? Say it: Epochal lyse. Epochal lyse... it's not an apocalypse, it's an epochal lyse... a giant tsunami that defines an epoch or an era.

#### A53—Japan tsu wash

Even today, it's easy to see the part of Lisbon that fell into the sea, or rather was washed into the sea in the last tsunami. And it is easy to imagine that nobody wanted any of this deadly graveyard nether-lands, or never-lands after the last tsunami.

So the Arabs came in and bought it all up for \$24-worth of beads... or something like that. Like they did with New Amsterdam... and probably like old Amsterdam, the old Never-lands, the place where people said NEVER live there again. These NEVER LANDS were the biggest of all the many never-lands in Europe. And that is why this place is called THE never-lands.

#### A53B Ache tsunami zone

Anyway, first the Arabs obtain a large never-never lands holding for next to nothing. Then they send in some of their unchosen people, their worthless

harem-spawn byproduct to watch over their holdings.

These built some docks and warehouses in the danger zone. Then the Arabs start sending all their international shipments to these warehouses, totally refusing to do business in any of the other nearby communities. And in the beginning at least, the Arab frontmen would lease their land for next to nothing to people who wanted to build on their holdings.

#### A54—NY skyline

Meanwhile, the Arabs would quietly struggle against all the other competing locations. These would suffer from secret acts of arson, intentional plagues, and other acts of Arab terrorism much more often than the Arab-owned land. Thus, after some time, the dangerous land which the Arabs acquired for practically nothing was turned into a national capital.

A good example of the Arabs using plagues to support one of their new national capital real estate schemes is the Philadelphia yellow-fever epidemic of 1793. Until this time, Philadelphia was the US capital. But right after the plague, due mostly the new pestilent nature of Philadelphia, the new city of Washington, founded only 3-years earlier was made the national capital. And this was hugely profitable to the owners of this real estate scheme for a distant capital in a tsunami funnel.

And the Arabs would also get their host nations to help their jaws of death real estate ventures in other ways.

Like how one Arab-owned tsunami zone was renamed as Beijing, or northern capital.

And another was made into the Thai capital by the Thai monarchy.

Thus the Arab-owned never lands become hugely valuable as with so many cities around the world today. Then the Arabs would rent or sell this land at a huge profit for centuries afterwards.

#### A55 Banda Ache mosque

Eventually, there would be another tsunami and the process repeated itself. And this is how these graveyard-places, these jaws of death locations come to be rebuilt after each tsunami.

#### A56—New York dominos

And the Arabs have run this scam countless times... wherever they could around the world for thousands of years.

At immense cost to humanity  
This taking jaws of death locations that nobody wanted  
and turning them into valuable urban real estate...  
which gave them income for centuries afterwards.

And this is what Pompeii was.

The local people had learned  
not to live next to Vesuvius volcano.

So There was free land to be had.  
So desperate Arabs moved there  
and grabbed some land for nothing.  
Then over some generations,  
they turned this jaws of death location  
into an upscale Roman resort community.

And judging from the pre-Roman name  
of Naples Italy, which was Neo polis,  
or new city in ancient Greek  
This new city REPLACED an old city,  
that was covered in ash and lava ...  
hence the name new•city.

So it seems like there's at least one city still  
buried under the volcanic ash near Naples Italy. Or  
maybe there are multiple layers of this. Only core  
drilling of the area around Vesuvius will tell us.

#### A57— Sandbar city

But basically, we in the host part of the world word  
hard to pay our rents and mortgages and feed the  
Arabs until there is another great worldwide epochal-  
lyse. Then the world starts over again with a slightly  
dumber and easier to manage human flock.

#### A58 Apocalypse = epochal lyse

Again, isn't it strange how we say apocalypse instead  
of Epochal lyse? Is someone trying to hide this  
knowledge... so they can profit from the next epochal  
lyse?

#### A59—Tsunami timeline

You know, California suffered a tsunami in 1640BC.  
And this is the same date normally given for the end  
of Atlantic civilization.

And it is also the date of the thick alluvial layer that  
Leonard Woolley discovered in Iraq.  
So again, it appears that the world does suffers from  
epochal lyses, or giant worldwide tsunamis.

And it is easy to know for sure. All we have  
to do is collect seashells from the world's coastal  
areas and carbon date them. Once we do a global  
cymology survey, we will now.

#### A60 Knowledge is power

Its often said that knowledge is power. Well,  
knowledge of tsunamis is power for the Arabs. And  
because of their exclusive possession of this  
knowledge, their people are able to profit greatly from  
tsunamis every so many centuries.

And make no mistake about it,  
the Arabs profit at the deadly expense  
of the rest of humanity  
You know, we are all just worthless infidels  
who don't believe in the religion  
of feeding the land of no resources.

You know, we don't matter to the Arabs.  
In fact under their current belief system,  
they are better off with us all DEAD... especially the

smarter ones like me, the ones that over the Millenia  
have always made trouble for their parasitic way of  
life.

#### A61—Japan washed image

Now think of all the talk we hear about California one  
day falling into the ocean, talk like in the Annie Hall  
film. Didn't Atlantis or Atlantic civilization of legend fall  
into the ocean?

You know what falling into the ocean actually  
looks like? It looks like this picture right here. And  
most of the world's most important cities are at risk.

And who is saying that cities fall into the  
ocean, when they really are washed away by  
tsunamis like in Banda Ache? It certainly looks like  
someone is trying to HIDE the true danger of  
tsunamis with this similar but confusing idea.

#### A67

##### **Troy = Byzantium = Constantino-polos = Istanbul**

Why was the city of TROY renamed Biz•antium and  
then Constantino•pol, and then Biz•antium again, and  
then finally East•end•pull? Was it to hide how the  
Mideast has been warring against Western  
democracies and Western freedom for thousands of  
years?

#### A69

##### **Hellas = Helen of Troy**

##### **Persia = Peris king of Persia**

Why was the nation of Hellas renamed Greece? Why  
were the Helens of Hellas personified as a queen  
named Helen? Why was Persia personified as a king  
named Peris? Why was Persia's theft of Greece  
turned into king Peris's kidnapping of queen Helen?

Was it to hide how the Mideast has been  
warring and struggling and jihading against Western  
democracies and western freedom for thousands of  
years?

Do you know why the Arabs hate democracy  
so much? It is because incorruptible government is  
the biggest step we can take against their parasitic  
feeding. Basically the Arabs hate any form of  
government where we are able to organize against  
their parasitic feeding.

#### A70 Lifeless desert

The words Arid and Arab are the same word you  
know. And the intersection of meanings was a  
problem for the Arabs... so over the centuries they  
split the word into two, Arid and Arab.

Over a hundred million people live in this  
place, in this Arid Arab land that can't really even feed  
the livestock driven into it.

How did these people survive for the past  
5,800 years? And how did their population grow to  
over 100-million people if they can't produce any food  
at all really?

And they have only had valuable oil since

1973... 45-years ago. What did millions and millions of Arabs live on before oil? And how did this land of no resources get the outside world to give them something for nothing for thousands of years?

#### A71 camel cigarette ad

Apparently, this ancient and totally desperate land has evolved a great many secret and subtel tricks for getting something for nothing from the outside world.

Parasitic tricks like the tsunami trick.

And like the tsunami trick,  
many of these secret money extraction tricks  
are genuinely awful and evil  
for the other part of humanity,  
the host part of humanity.

I mean, we have all seen those movies  
that are just one long cigarette ad.  
Was this **our** tobacco companies?  
Or were the Arabs pulling us in this direction?  
behind the scenes... **through** our tobacco  
companies?  
It seems like everyone's missed  
how the totally desperate land of no resources  
is always there.  
And it's always pulling on every cultural practice,  
every industry, and every government decision.  
Pulling them in a direction  
that their desperate struggle can profit from.

#### A72

**Ex•pull = e•vil**

**De-ex•pull = devil**

**E•gress** is from Latin **Ex•grex**

**E•ject** is from Latin **Ex•ject**

**E•radicate** is from Latin **Ex•radic**

The Arabs call their economic parasitism as pulling,  
or ex-pulling, or ex•pull  
when they get something from the outside world.  
But the letter X is dropped,  
like with the words egress, eradicate, eject, efface  
and many other words that should have an X,  
but they don't  
Thus the Arab ex•pull is the root of our word e•pull or  
evil.

And this evil parasitic ex•pull  
is the basis of the entire Mideast economy.  
It's what the land of no resources lives on.  
And to us in the host part of the world,  
in the good and honest part of the world,  
the ex•pull and all of its many tricks  
are something awful and mostly criminal.

But to the people of the land of no resources,  
the evil ex•pull is the only way they have  
to feed their people,  
and this has been so for thousands of years,  
since before the time of the great pyramids of Egypt.

So Arabs regard their evil ex•pull  
their Ishtar as something great...  
and they all struggle together for it.  
In fact, behind all the religious disguises,  
the group spirit of this evil ex•pull IS their god.  
And it is the TOTAL inversion of EVERYTHING  
we in the host part of the world  
would EVER want for ourselves.  
Because the parasite race  
is actually struggling  
to enslave the entire rest of the world  
And they want to kill or eliminate  
anyone who might get in their way.

And the only reason  
that the host societies even allow  
the evil Arab ex-pull to exist  
is that that they just can't see it.  
Because **part** of the struggle  
is to always minimize its appearance  
and to look like something else  
You see, it's a hideous or hideous thing,  
a think that needs darkness and misunderstanding  
in order to thrive.  
So it lies about itself,  
in fact it's constantly lying to hide itself.  
In fact, it spins this giant self-reinforcing **web** of lies  
about itself and it's interests...  
a web of lies we might call the matrix.

#### A73 Crescent moon

Lets now look at the symbolism of the crescent moon,  
the symbol of Islam. This is the cres... ....n't moon,  
the opposite of a building crescendo and the opposite  
of the Spanish word crescer, to grow. It is the non-  
growing moon, the waining moon, the sliver moon, the  
dark moon, the symbol of the darkest times on Earth,  
and this is the symbol of Islam. And it speaks of the  
darkness and misunderstanding that the parasite's  
agenda needs to survive.

For without darkness and misunderstanding,  
the totally inverted parasitic feeding is easily  
recognized as something a host society would  
NEVER want. Then the feeding is simply not  
tolerated by any host.

It is like when you flip-on the lights and  
discover a tick attached to your body and sucking  
your blood. EVERYONE removes the tick once they  
recognize it and once they UNDERSTAND what it is.  
Thus the crescent moon of Islam also symbolizes the  
way you can't feel a tick's bite... and the way ticks  
have flesh-colored blood sacs... so their hosts can't  
recognize the foreign parasite as easily.

Also, the Islamic crescent moon DOES look  
like a tick. I mean the crescent part looks like the  
tick's bloated blood sack. And the star looks like the  
part that attaches to the host. So in two ways, this is  
a really fitting symbol for Islam.

And TICK is also a perfect name for people who remains cleaved with Ishtar and Islam.

#### **Ishtar = shh•te•our**

And Ishtar actually means shh te our or shush•you•our-thing.  
So Ishtar basically means SHUT-UP about OUR secret, the secret that feeds the land of no resources. Or the secret of the Sphinx, or the way Ishtar and Islam need darkness and misunderstanding to thrive.

#### **God devil image**

And all the biblical mythology about the good god and its relationship with the evil devil. Its all **really** about this parasite and host relationship. Its about how the people loyal to the host part of the world naturally want freedom and peace and more and better

While the group of people loyal to of the parasite part of the world want their host to be enslaved, and fighting in profit able wars and to be poor and desperate So they will demand more of parasite's over-priced goods and so the parasite will grow rich and powerful.

And this group spirit of the Mideast This de•ex•pull spirit that feeds the parasitic land of no resources. This de•ex•pull spirit is the real devil spirit, the real root of all evil. And it is the total inversion of what is good for us.

This is the real devil. And it's something that very few host people ever really become aware of because, it's hide•ous or hideous like a gorgon, and takes every effort to hide itself... including making up a whole bunch of vivid propaganda about what devils are like.

#### **A74**

#### **The message that ends Islam**

The written part of my message shines the sun's light on hundreds of secret, hideous or hide•ous tricks that the Mideast uses to feed on the outside world. And these awful tricks like the tsunami trick, are the cause of most of the bad things that mankind brings upon itself.

#### **Don't let them know**

#### **where this message exists**

To make this message unstoppable, please spread the files via SNEAKER-NET In other words, until all the world knows about this

message, please just take the files around on thumb drives... and share them from device to device without any networks.

#### **Local search: Moving-all-the-people**

And you of the Mideast This is the very message that the struggle of your people is trying to bring about. You Arabs must read my special message to you before doing anything else

#### **Part B: How oil forms**

##### **B1 Persian Gulf funnel**

In the first part of this presentation, we saw how many of the world's most important cities are located in places where they are vulnerable to large but infrequent funneled tsunamis. Let's now look at another little-known aspect of tsunamis

Now the Persian Gulf is the world's largest tsunami funnel — capturing the flow from between Africa and India... perhaps 2,400 miles of wave front.

And we know that the Persian Gulf was flooded in around 3,500-BC... and again in around 1640-BC. According to archeologist Leonard Woolley, both floods left thick layers of sandy alluvial material in Iraq. In fact, the earlier flood left a sandy layer that is EIGHT FEET THICK in places.

##### **B2 Persian gulf soap rings around a basin**

Is it just a coincidence that the world's largest tsunami funnel is also the world's largest oil field?

Maybe the oil comes from the floating organic material left behind when the tsunami waters retreated. After all, the oil fields of the Persian Gulf do look like the soap rings left when you drain a wash basin, don't they? Especially those at the base of the Zagros mountains. Just imagine that this map is incomplete, and the soap rings go all around the edge of the Persian Gulf... stacked-up, one on top of another.

##### **B3 Texas soap ring art**

And the oil fields of Texas also look like soap rings left when you drain a wash basin.

##### **B4 Texas soap ring art 2**

Here is the same drawing from a different oil prospecting book.

### **B5 Los Angeles soap rings**

And the oil fields of Los Angeles also look like soap rings left behind when you drain a wash basin.

### **B6 Japan tsunami field**

Here's a field of floating debris deposited by the recent tsunami in Japan. Look at how thin and broad the debris field it is. This is how tsunami debris is deposited when the waters retreat.

### **Local search: Moving-all-the-people**

And you of the Mideast  
This is the very message that the struggle  
of your people exists to bring about.  
You Arabs must read my special message to you  
before sharing this message

### **B7 Offshore rigs close together**

Now here is a shallow offshore oil field. This is a place that is high and dry when sea levels are lower during ice ages.

Look at how close the wells are to each other. This tells us that oil fields are thin just like the floating debris fields that are deposited after a tsunami. The wells need to be close together so the oil in thin deposits will flow to the drain pipe.

And the fact that the wells are spread over a wide area tells us that the oil field is wide, also just like a tsunami debris field.

### **B10 stacked oil deposits**

Here is an illustration from a petroleum exploration textbook by Levorson showing many thin layers of oil stacked, one on top of the other. You see every so many centuries on average, there is a tsunami, and a tsunami debris field is deposited. Then the tsunami debris field gets buried by sediments. Then there is another tsunami and the process repeats itself for millions of years.

Eventually due to sediment buildup and continental uplift, the location stops experiencing tsunamis. Then over the eons sediments build-up on top of the oil deposits. Here we see a very old inland oil deposit that has been buried by more than a kilometer of sediments.

But coastal oil fields, such as those in Los Angeles and the Persian Gulf are actually quite shallow and inexpensive to reach. And there are a great many oil deposits stacked up one on top of another.

### **B11 stacked oil deposits 2**

Here is another textbook illustration. Note how there are many layers of oil stacked, one on top of another. Note how the oil deposits are thin and broad just like the tsunami debris field we saw in Japan.

### **B12 Salt dome Spindletop**

And here is another textbook illustration of a typical oil field. Again, note how the oil deposits are thin and broad and staked-up one on top of another.

And note how the oil field occurs with salt.  
In fact there is a huge salt deposit.

### **B13 Exxon gas prices**

Now here is a question for you  
How does oil form?  
Again, how does oil form?  
You don't know exactly... do you?  
Isn't it strange that you don't know?

### **B14 World trade center in flames**

What a hugely important thing oil is  
and nobody really has any idea how it forms.

### **B15 Science lab**

It is the strangest thing, but how oil forms is a mystery to modern science with all its chemical analysis and genetic testing.

### **B16 Microfossils**

And oil obviously comes from marine life. This is evident from all the seashells we find near oil deposits. Here is an illustration of that fact from an oil exploration textbook.

### **B17 Levorson Ch. 11**

Yet in one oil drilling textbook after another... the origin of oil is officially a mystery.

### **B18 Origin of Oil**

Here's another oil textbook. It ALSO says that how oil forms is a mystery, although people do have their theories.

So if, nobody knows for sure how oil forms... then shouldn't we be open to the first reasonable sounding explanation we hear.

### **B19**

#### **Why didn't bacteria use the plant energy?**

Now I assert that how fossil fuels form is obvious once we ask the right question. That question is: Why didn't bacteria use-up or eat all the life energy? Why is the life energy still there for us to burn?

Clearly there must be some sort of preservative that keeps the bacteria from eating and using up the plant energy. Right?

### **B20 Salt dome Spindletop**

What is the #1 naturally occurring preservative?  
It's salt, isn't it?  
Did you know that most crude oil is associated with salt?  
Once you know that oil is associated with salt,  
could it be anything else but salt

that keeps the bio-energy from decaying... from being eaten and used-up by bacteria.

## B21

### Where are the world's oil fields?

Where are the world's oil fields? Do you realize that they are all mostly near a present-day ocean or an ancient ocean?

## B22 Offshore rigs close together

Oil fields are offshore, in the salty ocean, on the continental shelf. This is actually the shoreline during ice ages, when sea levels are lower.

## B23 Persian gulf oil fields as soap rings

Oil fields are near the ocean in the Persian gulf, in a place where the soil is frequently too salty for plants to grow, unless the soil is washed by river water.

## B24 Libyan oil fields

Oil fields are near the ocean in Libya. In fact, they are right where the coastline funnels the tsunami debris.

In the Rand McNally Atlas, oil fields are shown as little pyramids. I have added day-glow highlighting to make them more visible.

## B25 Kuwait oil fields

Oil fields are near the ocean in Kuwait

## B26 Iran oil fields

Oil fields are near the ocean in Iran

## B27 Iraq fields

Oil fields are near the ocean in Iraq, near Basra. And Baghdad, which is only 34-meters above sea level.

## B30 Nigeria fields

Oil fields are near the ocean in Nigeria. In fact, they are right where the west coast of Africa creates a giant tsunami funnel that is up to 2000 miles across.

## B31 Venezuela fields west

Oil fields are near the ocean in Venezuela. In fact, they are right where the coastline funnels the tsunami debris.

## B32 Mexico fields

Oil fields are near the ocean in Mexico

## B33 Angola fields

Oil fields are near the ocean in Angola

## B34 Brunei fields

Oil fields are near the ocean in Brunei

## B35 Indonesia fields

Oil fields are near the ocean in Indonesia

## B36 India fields

Oil fields are near the ocean in India. In fact, they are in the Bombay tsunami funnel.

## B37 China fields

Oil fields are near the ocean in China. In fact, they are in the Beijing tsunami funnel...right where the coastline funnels the tsunami debris.

## B40 Tunisia and Algeria fields

Oil fields are near the ancient shoreline in Tunisia and Algeria. And right where we would expect tsunami debris to be funneled.

## B41 Alaska fields

Oil fields are near the ocean on the north shore AND south shore of Alaska. In fact they are in the Anchorage tsunami funnel. The Alaska oil pipeline is also highlighted here.

## B42 Saudi fields

Oil fields are near the ocean in Saudi Arabia.

## B43 Kazakhstan fields

Oil fields are near the salty Caspian sea in Kazakhstan.

## B44 Caspian sea coastal fields

Here's another illustration of Caspian Sea oil fields, from an oil drilling textbook.

## B46 Texas and Louisiana map

Oil fields are near the ocean in Texas and Louisiana. And when they are inland, they are generally near an ancient shoreline.

## B47 Gulf Miocene era 23-5mya

Here's another map of the Texas and Louisiana oil fields... the ones from the Miocene geological era... up to 23 million years ago.

## B50 Gulf Oligocene 35-23mya

Here are some oil fields from the same coastline, but from Oligocene geological era up to 35 million years ago.

It should be noted that as we go back in time, the oil fields occur further inland. This is due to the well accepted theory of continental uplift — where the hammering of countless earthquakes causes the continents to slowly rise over the eons.

So here, with this inland oil, what we are actually looking at is old oil that formed on the old coastline that existed when the continent was lower.

## B51 Gulf early Cretaceous 146-65 mya

Next are oil fields from the early Cretaceous era up to about 100 million years ago... these are still further inland.

### **B52 Gulf late Cretaceous 146-65mya**

Next are oil fields from the late Cretaceous era up to about 146 million years ago... even further inland.

### **B53 Gulf Upper Jurassic 208-146 mya**

Next are oil fields from the Jurassic era up to about 208 million years ago. So the reason for all the inland oil is that it **actually** formed on an **ancient** coastline.

And again, note how the oil fields of Texas and Louisiana are like soap rings around a basin.

### **B55 Original Drake oil well**

Oil fields are also located near an ancient ocean shoreline in Titusville Pennsylvania, about 40 miles inland from lake Erie. In 1859, Edwin L. Drake drilled or rather hammered the world's first oil well in Titusville. This was near an ancient ocean coastline that is now the shore of Lake Erie.

This well struck oil at only 69' (21m) down. It was in an area of brine wells. People were pumping salty brine water into salt pans where it would be left to dry into salt for livestock. In Titusville, like many other brine fields, the salty brine often comes out contaminated with naturally-occurring crude oil.

### **B56 Kelp air bladders**

New subject. Petroleum comes mostly from kelp, or seaweed. And this should be easy to prove by genetic testing of any shallow petroleum pool, such those at the La Brea tar pits.

Kelp has little air bladders that help it float to the surface, where the sunlight is strong. And incidentally, in case you didn't notice, the kelp pictured here is floating AT the surface. You can see the surface reflection at the top of the image.

### **B57 sunlight penetration**

Sunlight is heavily filtered by water. In fact, 60% of visible light energy is lost in the first meter. And 80% of visible light is lost in the first 10 meters. And this filtering is especially high for the wavelengths that plants use to photosynthesize. So ocean plants grow 3 to 5 times faster on the surface than when they are even 1-meter down. And deeper than 10 meters, they barely grow at all.

### **B60 Kelp air bladders**

Again, kelp plants are vines with small air-sacks that float the vine to the surface where the sunlight is strong. This is how they overcome the light penetration problem. And these same small air-sack also make kelp float in front of tsunamis.

### **B61 Kelp forest tendrils**

The vine part of a kelp plant only grows to 115-ft, or 35 meters in length. So kelp will only grow in waters this deep. And like a typical forest vine, kelp has adapted to get up to where the sunlight is strong and

once up there trail as far as possible in the rich sunlight of the surface.

### **B62 Penguins and kelp**

Kelp is a vine that just keeps growing and building in the full sun of the ocean's surface. It grows until that part either gets covered by other kelp vines, or it breaks off. So if people don't trim the kelp, it will just keep building in length and mass.

### **B63 Seaweed on beach**

Frequently a great storm or tsunami will tear up a whole shoreline's kelp forest, which floats due to the tiny air bladders.

Then the floating debris tends to get washed on to the shoreline — focused into gulfs and shoreline funnels where it forms thick sheets of kelp debris much larger than the tiny kelp pile shown here. What you see here is the small amount of breakage that occurs in a place where they trim the kelp.

### **B64 Japan thick debris field**

Here's the floating debris deposited by the recent tsunami in Japan.

Just try to imagine a layer of kelp deposited, instead of the churned and shattered lumber from Japanese homes.

### **B65 Japan kelp in the debris**

If the Japanese didn't harvest their kelp as food, there would be a much greater volume of kelp mixed in with this debris.

### **B66 Deep oil propaganda**

Here's illustration from an oil prospecting textbook. It says that oil forms and incredible one and a half to 3 and a half miles underground... It also says that there is not much oil less than one mile down.

But it's really just Arab propaganda.

In truth, the kelp is deposited on the planet's surface.

Then it breaks down into oil near the surface, and quite rapidly in fact, in a matter of decades and centuries. The idea that that petroleum forms many miles underground is just Arab propaganda to make oil seem harder to reach and thus more valuable.

Indeed, it's probably the Arabs coined the term fossil fuels, so that oil seemed like something very ancient, and thus buried far underground and hard to reach.

### **B67 deep drilling ad**

Here's an ad from Time Magazine... from the 1970s... really just more Arab propaganda suggesting that the place to find fossil fuels is miles underground. ...In this case an incredible 5-miles underground...at the limit of our ability to drill into our planet.

And again, don't fossil fuels all come from life? And doesn't life exist on the planet's surface? How did the plant matter get 5-miles down?

### B70 Kelp air bladders

New Subject.

Due to osmosis,  
seaweed is just as salty as seawater  
The stuff we find in grocery stores  
has all been soaked in fresh water  
to wash the salt out... before it was dried

And when we boil the kelp again,  
the weight increases by about 20-fold.  
So kelp is no surprise about 95% water.

So when kelp dries,  
if it is not washed with fresh water, or rain,  
the salt concentrations will rise up to 20-fold.  
Thus salt, the world's #1 natural preservative  
keeps bacteria from being able to consume  
the plant energy in the kelp.  
Thus the energy is preserved  
for us to use as petroleum.

### B71 Salt dome Spindletop

So let's imagine a pile of kelp deposited as a great sheet  
Like that that tsunami debris field we just looked at in Japan.  
And this is a wide and flat sheet of kelp  
so in hot and dry climates especially,  
it rapidly dries out a bit  
And becomes too salty  
for even bacteria to consume.  
So the kelp just sits there,  
because nothing can eat it.

Eventually, the wind blows sand over the sheet of kelp,  
Then over some decades and centuries,  
the organic bonds break down,  
and the material liquifies.

Then the liquid separates into brine and oil.  
brine being salt saturated water  
And because salt is heavy,  
it accretes to the bottom of this underground pool.  
That is oil over brine, over salt.

And this pool is very salty and thus it is very osmotic. So it constantly draws water in from the outside. Thus the periphery of the deposit has lower salt concentrations, and thus much less salt accretes, than at the middle part and this is where oil field salt domes come from.

Also, the image you see here is the matrix doublespeak version of a salt dome. Salt domes are not tall and thin, they can be miles wide and only a few feet thick at most.

### B72 cutting the kelp

New subject. It really doesn't make any sense how

the kelp harvesting companies of California both trim the kelp at low tide, and cut it below the water's surface. Why must they cut the kelp to the quick? Why must they cut the kelp to the point where it's growth slows?

If the kelp companies were genuinely interested in maximizing their harvest, they would mostly cut the kelp at high tide, and leave some of the plant in the rich light of the surface.  
And they would never run their cutters below the surface of the water.

So apparently these kelp companies don't want to maximize their kelp harvest. Apparently they want to minimize their harvest. Thus we realize that kelp harvesting is not actually a real thing

It's just another part of the Arab matrix illusion. It's this matrix program that keeps us from seeing piles of kelp rotting on the beach after storms... and so we don't realize that oil comes from kelp mostly.

It also helps get people to live near the shore, in the jaws of death... where the stench of rotting kelp would otherwise be quite overwhelming at times.

### B76 Summerland beach oilfield

So petroleum is coastal and shallow by nature, at least the most recent oil fields are ... like the oil fields of the Persian Gulf... and Summerland beach oil field shown here. Summerland is just south of Santa Barbara California, on the scenic coast highway heading towards Los Angeles.

### B77 Long beach map

Now that we understand how oil fields form out of fields of floating tsunami debris, it becomes easy to spot the place that will have oil. We just look for coastal features where tsunami debris would tend to get funneled and trapped. For example, the Palos Verdes peninsula shown here traps tsunami flows arriving from two directions. And this is why Los Angeles is so full of oil deposits... buried under the city that needed to cover all of the immense alluvial area with sprawl.

### B80 one quarter up, one down

You know, our tsunami vulnerable cities, and our dependence on Mideast Oil are just two aspects of the same thing... two sides of the same coin... the coin... that feeds and sustains the land of no resources in a number of different ways.

### B82 Summerland beach oilfield

Recent coastal oil deposits are not very far down, or hard to reach,  
or under much pressure.  
So there is little need to worry about gushers.  
And there's also no need  
to drill right on the coast like this either.

### **B83 Micro-continents**

Here we see how continents build up from the remnants of island chains and other un-subducted landmasses. So there are a great many ancient coastline oil fields inland, if we care to look for them... and drill a little bit deeper.

### **B84 oil fields in layers**

And many of these ancient shorelines have bays that are filled with one petroleum pool layered upon another, extending great distances down underground and far into the past.

### **B85 stacked oil deposits**

Here's the same textbook illustration we looked at before... again notice how it shows many oil layers stacked, one on top of the other. This image however, depicts an VERY old oil field that has been buried by more than a kilometer of sediments. There is really no need to drill for oil on coastlines this ancient.

### **B86 stacked oil deposits 2**

Here's another textbook illustration showing many layers of oil stacked, one on top of the other. Note how the oil deposits are thin and broad just like the tsunami debris fields we saw in Japan recently.

### **B88 Summerland beach oilfield**

Now let's get back to the Summerland Oil field, just south of Santa Barbara on the road to Los Angeles.

### **B89 Summerland map**

The oil field was set up is just west of a community of summer cottages, called Summerland. People had summer beach houses here to escape the summer heat of Los Angeles... hence the name Summerland. The cottages were there first. But then SOMEONE provocatively put an oil field RIGHT on the beach in front of this community and just ruined the place.

Now California's Pacific Coast Highway is famous for it's scenery and this drive has been a tourist attraction for decades. But everyone taking this route would see the Summerland oil field. And it was an otherwise beautiful beach that was just RUINED by ugly oil wells.

In fact, it was an environmental tragedy that just cried for regulation — as was probably INTENDED by the people who decided to put an oil field on Summerland beach. Thus they were able to manipulate public opinion in Southern California, the prouw, or the proudest part of ship of the land of the free... the place that sets the trend for the rest of the nation.

### **B90 Summerland beach oilfield**

And every so often, there would be one of many small Santa Barbara oil

spills.

And each barrel of oil contains 159 liters. So every 6 barrels of oil will produce about a million crude oil blobs that are 1 cc each.

Then the prevailing currents would carry these coin sized oil blobs southward, all over the famous beaches of Los Angeles and San Diego.

### **B91 Long Beach oil field**

In 1892, Long before the Summerland oil field existed, Edward L. Doheny drilled the first oil well in Los Angeles, striking oil at 200 feet, or 61 meters down. Doheny discovered what was to be later called the Los Angeles City Oil Field...

This was near today's Dodger Stadium, and illusion park just east of downtown Los Angeles... about 15 miles inland and not much above sea level. Later someone else discovered the SALT Lake Oil Field a few miles to the west.

By 1923, Southern California was producing one quarter of the world's total oil output. And much of that oil came from the Long BEACH oil field shown here. And again, this was a BEACH oil field, a LONG BEACH oil field.

### **B92 Quicksand drawing**

Doheny's first Los Angeles oil well was only a few miles away from the famous La Brea Tar-pits—a surface oil field that became encrusted with sand. Animals would walk on the sandy crust and fall through the thin spots, into the oily quick of the quicksand.

### **B93 Back-floating person**

And while animals and people are lighter than any combination of water and sand, they are heavier than oil—which is not only slippery, but thick and viscous and much harder to swim in.

### **B94 Quicksand scene crystal skull**

So the reason why the La Brea tar pits are full of trapped animals is that it was actually quicksand they were trapped in.

... or you could call it a surface oil field...

### **B95 Stuck in quicksand crystal skull**

Have you ever heard another reasonable explanation for what quicksand is? Why would people AND ANIMALS sink to their deaths in pools of sand and water when they are lighter than both sand and water?

### **B96 Quicksand scene Apocalypto film**

Here in the film Apocalypto we see what real quicksand looks like. Note the black crude oil sticking to this person. And note how there is a sandy crust on the top of the oil pool.

What happens is that oil leaches into the surrounding sand and dirt and forms gooey tar-sand at the edge of the oil pool. Then over time, the tar sand hardens into naturally occurring asphalt. Thus oil pool tend to develop hard shells that can keep the oil fresh for tens of millions of years.

But before the oil pool develops a thick, strong and hard shell, it develops a thin, weak and soft shell. Here we see someone who fell into an oil deposit covered with a thin and soft shell, and here we understand exactly what quicksand actually is.

### B97 Quicksand 2

Here's what people REALLY look like when they come out of quicksand. They have crude oil all over them, like this guy here.

Now think about how quicksand scenes were completely over-used in children's media for decades. In every single quicksand scene, people come out of the quicksand, don't they? And never do we see all of the victims die in quicksand...

### B98 Indiana Jones pulled out of quicksand

What's going on is that all of the many lame quicksand scenes are actually Arab propaganda. Their purpose is to hide how quicksand is actually a surface petroleum deposit.

This is primarily accomplished by showing people coming out of quicksand that are either dry or wet with clear water, or covered with something that is water soluble.

### B99 quicksand 3

In this scene from the Apocalypto film, we have someone that is covered in mud that looks exactly like crude oil when it's wet. But look at how easily water washes this stuff off ... So it must not be crude oil...

This particular scene is grown-up propaganda. But most quicksand scenes are child propaganda... occurring in kid's media... right?

This is how our Arab SHEPHERDS acquaint their flock to the most problematic parts of their matrix, their great self-reinforcing lie while they are still too young to properly question them.

### B100 Mideast oil-fields map

New subject. To find oil fields, look in places where the coastal features funnel and trap floating tsunami and storm debris. And if you are willing to drill a little deeper, look for ancient coastal features, inland coastal features that would funnel and trap floating debris.

And imagine that there are Gulf-filling tsunamis every say 3,000 years. So in the last 60-million years there were say 20,000 tsunamis... and their debris fields are stacked up... one layer, upon another...all around the world.

### B105 North American rainfall

Also, it is best to look for oil in places where there is little rain. Rain can be a problem for oil formation because too much rain tends to wash the preservative salt out, leaving the kelp to be eaten by bacteria.

Thus the dry coastlines of California, both current and ancient, would be ideal places to prospect for oil if it weren't for the fact that the totally corrupt state government of California has imposed some of the strictest environmental laws in the world.

Likewise, the dry west coasts of Mexico would be an ideal place to prospect for oil were it not for the fact that the Mexican constitution prohibits all possession of coastal property by foreigners.

Thus only Mexicans can drill for coastal oil in Mexico... and Mexico's entire petroleum industry is under the management of a corrupt national monopoly named Pemex. So if Pemex doesn't do any sensible oil exploration in Mexico, there IS no oil sensible exploration in Mexico. How convenient this situation is for OPEC.

So it seems that OPEC has corrupted our democracies and gotten them to impose some superficially plausible laws that restrict our ability to compete with their super expensive oil.

### B106 deep drilling ad

New subject. Here is that ad from Time Magazine again. Clearly some group wants the world to think of fossil fuels as occurring deep underground. And this group is redirecting large sums of money to advertise and otherwise promote this idea.

### B110

#### Deepwater Horizon film trailer

"Like the mean old dinosaurs all that oil used to be. So [for] 300 million years, these old dinosaurs have been squeezed tighter and tighter... and these mean old dinosaurs ... dad you need to get me a

This quote is from a super long movie trailer for a film called 'Deepwater Horizon'.

It's about an explosion on an offshore drilling rig.

Apparently somebody with lots of oil wants oil to seem like an ancient "fossil fuel" that's 300 million years old and buried far underground, and super expensive and super dangerous to reach.

This is because all these things make their oil more valuable. So they created a bunch of disinformation, or propaganda like this clip here. And if this is propaganda, then isn't the opposite true? Isn't oil shallow and easy to reach? And shouldn't oil be cheap to find, and easy to extract?

### B112 skilled petroleum engineers

Here's some more propaganda about the oil drilling process:

<read>

And it doesn't matter where this came from, because just about every place in the media that mentions oil makes it something deep underground, expensive, hard to locate, dangerous, hard to understand, toxic, or bad for the environment.

### B113 Pump jacks

And you know, for shallow oil, there is simply no reason for oil well pump jacks to be so huge, ugly and expensive.

### B114 Concrete pump

For oil wells are less than 1,000 feet deep, we can use compact pumps like the concrete pump shown here. The pump is incidentally the orange part left of the blue electric motor.

Thus we realize that the giant oil well pump jacks are another part of the Arab matrix illusion. You see, the Arabs need oil well pumps to be big and ugly.

If they were small like this concrete pump, we could easily put them inside a concrete box and plant shrubs around them, and then nobody would have much reason to care about quiet, invisible, airtight, odor-free, oil well using a vapor-recovery-system.

And doesn't it strike anyone else as odd that gas stations are allowed next door to people's homes, but oil wells are normally considered to be a crime against nature... pretty much wherever they are located outside the Mideast

I guess the difference is that one is taking oil out of the ground that HELPS with Arab oil sales, and the other is taking oil out of the ground that HARMS Arab oil sales.

### B113 Pump jacks

Look at how the tripods all too tall... and the fulcrum points are un-necessarily high off the ground. So here we see how oil well pump jacks were designed to be tall and ugly.

And even stranger is how they stayed tall and ugly. So it seems that the free market is not really working in the oil well pump jack industry.

What a thing it is that the Arabs can burden our oil industry with oversized and ugly oil pumps if they want. What a thing it is that they can make us drill deep wells that need these stupid things.

### Depletion curve image 2

Now here is the depletion curve for a typical oil well. Look at how the well is about half depleted within only a few years.

In fact, oil well are typically 2/3 depleted by the end of year 3.

So why are they using giant 6-inch and 8-inch well holes then?

And look at the barrels per day output. You know, a thousand barrels of oil a day can be drawn through a 3-inch pipe.

It's about like a 3-inch fire hose filling an oil drum every minute and a half.

So there seems to be a bit of a disjuncture with the output shown on these graphs. And the expensive 6" and 8" drill pipes that are used for drilling oil wells.

### Depletion curve image 1

Here's another textbook depletion curve. It implies about a 70 barrel a day maximum output.

So why drill costly 8-inch holes when a 3-inch hole will do for a shallow test well?

So the oversized drill holes are yet another money wasting practice of the petroleum industry outside the Mideast... another way for the Mideast to make its competitor's oil more expensive... Especially with shallow test wells. Such as people should be drilling in so many parts of the world right now especially in tsunami funnels that are hot and dry and have offshore kelp

### B115 offshore rig

And if we're getting our oil from our land areas, there is no need for insanely expensive offshore oil rigs. These are OPEC's idea of where we should get out oil... And OPEC likes how these things can have oil spills that easily become environmental disasters. Because OPEC **likes** the insane 50-billion dollar fines that punish OPEC's competitors.

You know, the massive offshore drill rigs we see over and over again in oil company ads...

They're not real.

I mean, they are not real in the sense that we can find other places on land where oil is **much** cheaper to extract.

And they are not real in that drilling for oil on land is hundreds of times less harmful when there is an oil spill.

And they are not real in the sense that they exist primarily for propaganda purposes, to show how oil is getting scarce, and how people have to drill in very expensive places to find it.

### B116 Offshore rig-2

And the Offshore rigs are not real in that our oil companies are still using them to drill for oil offshore despite the fact that they need to worry about insane \$50-billion fines like BP recently had to pay.

And they're not real in the sense that nobody documented any harm to the environment from the recent BP spill, yet the company still had to pay.

And they're not real once you do the math and figure out the impossible amount of oil they have extract to make the investment worthwhile.

And you know, if anyone is going to invest a

billion dollars in a risky offshore oil rig, they are going to expect at least a 10% return. So that's a hundred million dollars a year the company will have to net selling oil.

And if we only assume margins of 75%, that is about 400 million dollars in oil... that the billion dollar offshore drill rig will have to extract each year to pay for itself.

That's over a million dollars worth of oil a day. And at \$50 a barrel, that's 20,000 barrels a day of oil...each day, every day for **each** billion dollars invested in an offshore oil rig

20,000 barrels is 3,800 cubic meters. That's a cube the size of a 5-story building... and that volume of oil is supposedly being extracted every day... Where do they store that huge volume of oil?... And how do they get the oil to shore?

So basically, the GIANT offshore oil rigs are not real — they are just more Arab matrix illusion.

## B117

### Herodotus, 3.110

"When the Arabs go out to collect cassia, they cover their bodies and faces, all but their eyes, with ox-hides and other skins. The plant grows in a shallow lake which, together with the area around it, is infested by winged creatures very much like bats. These have a terrifying screech and are very aggressive. They have to be kept from attacking the man's eyes while they are cutting the cassia."

You know, for thousands of years, the Arabs have been running propaganda to justify the high cost of the products monopolize. Here is some Arab propaganda from 2,500 years ago. It gives a ridiculous explanation for why Arab monopolized cassia was so expensive. And apparently it doesn't really matter how absurd the propaganda excuse is. <read>

## B118

### "All Max-ed out

#### All mined out"

What is the opposite of ALL MAXED OUT? How come we don't say ALL MINN-ED OUT? How come ALL MINED OUT refers to a old mine that is no longer producing minerals? And doesn't that phrase ALL MINED OUT imply someone MINimizing our MINes, our minerals, and our oil resources? And what about the people who say: "You can't dig there, it is MINE."

## B119 Mines in Afghanistan

Do you think that the Mideast might have used some tricks to MINimize our MINerals, so **THEY** could provide more of the world's supply? And so what little mineral wealth they have to sell... or broker... would be more scarce and valuable like with black gold, metallic gold, and De-bars diamonds,

And also lithium from dangerous Afghanistan, as we see in this article to make batteries for our giant oversized electric SUVs... which are at least 5 times heavier than electric cars needs to be. And need 5 times more lithium. So in addition to all struggling to minimize outsider mineral output They are also all struggling to maximize outsider demand.

Do you think the desperate land of no resources is just lucky to have most of the world's proven oil reserves? Or is it more likely that they used their dirty tricks to MINimize our MINerals so their MINerals would be more valuable.

## Sheep pic

And isn't the desperate land of no resources just a little bit TOO fortunate with regard to natural resources?

You know, in ancient times, the Arabs actually convinced the Romans in FERTILE ITALY no less, that they were dependent on Mideast FOOD.

## REALLY!

Rome in fertile Italy thought it was dependent on imported food from the Arab desert for most of 800-years.

And this was about 100 years longer than Rome existed as an empire.

In the written part of my message I list some 65 ancient quotes that show how Rome was dependent on food from Egypt and Tunisia mostly.

## B120 Peak oil

Now according to a bunch of people who are surely working for OPEC, the world only has a couple hundred years of oil left. They call this oil PROVEN RESERVES.

And guess what?

The Arabs supposedly have most of the world's PROVEN RESERVES. We all know the story right?

Well, it's not true. It is simply not true. They just minimized **our** minerals so **their** minerals would be more valuable.

And it's super easy for us to verify this. To drill shallow wells in the soft alluvial soils say 3" pipes, 500 feet deep or until we hit formation rock

And let's do this on fiesta Island,

and the Del mar fairgrounds  
and Lidberg field in the parking lots  
and the north-island naval base  
and the park near the Long beach refinery  
And there isn't supposed to be any oil  
In these places, so what's the harm?

But people should watch this in great numbers  
and count the lengths of pipe  
Although you must be warned...  
in California it's a felony to drill a well without a permit  
And California hasn't issued any oil well drilling permits  
in decades really.  
Because the Arab have the fix in.

**Local search: Moving-all-the-people**  
And you of the Mideast  
This is the very message that the struggle of your people is trying to bring about.  
You Arabs must read my special message to you before doing anything else

### Part C: Corrupting our leadership

#### C1 Expensive drill bits

You know, if oil is shallow, there is no need for 300,000-dollar drill bits like this one here. Drill bits that wear out in as little as 100-hours apparently. And why should this bit cost 25,000 times as much as a 4-inch diamond saw blade?

Perhaps the short lived \$300,000 drill bits are another aspect of the matrix illusion, the great self-reinforcing lie of the Arabs. Maybe they exist to reduce outside competition for the super-expensive oil that feeds the Mideast, the totally desperate land of no resources.

#### C2 Deep oil propaganda

This illustration from an oil drilling textbook tells us that oil is generated between 1-and-4 miles under-ground.

Strange how the world's first oil well in Titusville Pennsylvania struck oil at only 66-feet. and strange how the first well in Los Angles struck oil at only 200-feet. And strange again is how in the Persian Gulf the oil wells are no more than a few hundred feet deep.

But if we're going to believe this un-believable illustration, there isn't supposed to be ANY oil that shallow, is there?

So you know how the Arabs get around this problem? You know how they account for the shallow oil? The oil is supposed to have formed

deep underground and then MIGRATED upwards to its present location From perhaps 4-miles underground to just below the planet's surface without just dissipating away

And that is how they account for the pools of salty dissolved bio-matter close to the planet's surface... where all the planet's life exists.

#### C3 anticline 1

The oil textbooks also say that the place to find oil is trapped under a geological feature called an anticline... which is shown here. An anticline is the highpoint of the underside of an underground hill. It is an arc in earth's crust... where sedimentary layers have been bent into a hill by earthquakes.

According to oil drilling textbooks, the lightweight oil is supposed to migrate or float up from deep within our planet... up to an impermeable layer in an anticline where it accumulates.

But look carefully at this image. Isn't it strange how sub-surface contours don't translate into surface contours. Isn't it strange how the surface is flat and the sedimentary layers are just sort of cut-off, or trimmed once they reach the surface... which again is FLAT, like Los Angeles and most of the world's coastal oil fields.

Clearly this drawing is nonsense... and Arab propaganda. And propaganda like this, once we see it as propaganda, actually tells the truth with perfect clarity. Hilltops are by far the worst place to find oil, not the best as we are told here in this Arab propaganda.

#### C4 anticline 2

Here is another drawing of an imagined anticline... from another oil drilling textbook. Note how there's this special place deep below the surface that must be located PRECISELY to find the oil. So according to the Arab propaganda, you can't just drill your expensive deep well anywhere and expect to find oil.

Therefore, according to the Arab propaganda, oil drillers need super-expensive sensing equipment to find that precise spot... super-expensive equipment that only specialist companies can afford, companies that are little-doubt quietly run by the Arabs.

And once people drill the only hilltops that these companies say might have oil, once they find no oil in these spots, the whole area is considered as dry.

Also, the Arab anticline propaganda does say that the best place to find oil is right at the top of a hill. However, in the real world, hilltops are the one place where we will find almost no oil. In the real world, oil occurs in bays and valleys and on the sides of hills... where tsunamis and storms deposit giant

heaps of Kelp.

You know, it is only in the matrix, in the giant self-reinforcing lie of the Arabs that we see oil associated with hilltops... that is when it is not being associated with the deep sea floor.

#### **C5 Beverly Hillbillies pic**

Another example of Arab hill-top oil propaganda is the Beverly HILL-billies TV show. These were people that came from the HILLS where they discovered oil and struck it rich. Then they moved to Beverly HILLS in Los Angeles where so much of the world's oil recently came from.

And every week, the introductory song said "And they moved to Beverly, HILLS that is, swimming pools movie stars".

Incidentally, this is what real propaganda looks like. Here the matrix reality was bent away from the genuine reality and nobody even noticed. Here oil is gently being associated with hills, and nobody even noticed.

#### **C6 LA hill oil propaganda**

Note the signal hill oil field on this map. Apparently SOMEBODY is running textbook propaganda to associate oil with hills.

#### **C7 Signal Hill Long Beach**

Here is a picture of the Signal HILL oil field. Not much of a hill is it? Any less of a HILL and it might not trap the floating tsunami debris.

#### **C9 Hughes lunatic**

New Subject. Howard Hughes initially made his fortune selling patented oil well drill bits. And these super-expensive drill bits were the only way to drill the really deep wells...

#### **C10 Hughes crazy**

and reach the deep and marginally profitable oil that the US oil industry was being directed to go after. After all, most oil drilling textbooks say that oil occurs deep underground.

#### **C11 Hughes naked**

And these patented drill bits were both super-expensive and wore out quickly too. Thus they were also hugely profitable... And that is where Howard Hughes' fit in.

#### **C12 Hughes burning clothing**

Hughes was famously reclusive and by a many people's reckoning crazy or mentally ill. Here he is burning all his clothes in the recent Aviator film. So Howard Hughes was a person that was quite DISTRACTED and unable to manage his own affairs.

#### **C13 Hughes and Noah Dietrich**

So Hughes left his business affairs to his assistant... a

man named Noah Dietrich. Thus we see Howard Hughes as this straw-man or ornament managing the billions of dollars in Arab tax money they raised from the US drilling industry.

His company and his patent monopoly existed to drive drilling costs as high as possible outside the Mideast, and capture the resulting income.

#### **14 Hughes buys TWA**

And Noah Dietrich used the drill bit money to buy a controlling interest in America's dominant domestic airline TWA. And TWA made nearly all of the profit from the domestic airline industry.

So on one hand Howard Hughes the Arab front man was making great sums of money from getting oil out of the ground. And on the other hand he was using that money to fund an alternative to the energy-efficient railroads that the Arabs have hated since at least the 1840s.

The thing is that trains use less than 3% as much energy as either personal automobiles or truck freight. So the Arabs have ALWAYS struggled to make our trains... Especially our commuter trains... slow, dirty, unpleasant, expensive, dangerous and covered in graffiti.

So here we see how the Arabs ran the Howard Hughes fortune for their own benefit. And it is just like they have always run many host-nation institutions for their own benefit.

#### **C15 Hughes La Cienega**

How many of the world's biggest companies and organizations do the Arabs run in similar manner? And how much of our media are they producing? I mean, of all the countless streets in Los Angeles, Why have the oil-well drill-bit guy mention La Cien Agua boulevard? Remember Century Water boulevard?

#### **C16 Hughes Zero fighter**

And the Hughes fortune was also used to develop the basis of the Japanese Zero fighter-plane that greatly prolonged the war with Japan.

#### **C17 Japan burned out areas**

And when America cut Japan off from the imported oil it was completely dependent on... Japan still had this large fleet of Zero fighter-planes... but no fuel to fly them. So they economized their fuel by using their planes for Arab-style suicide bombing attacks, like flying suicide car bombs.

But these kami-kazi suicide attacks don't really make sense. I mean, here is a nation that was completely without fuel for its navy and air-force, and tanks, and to drive supply trucks, and trains, and to harvest grain and power lights and power the telephone system...

No fuel for any of these things....There is no

way that Japan can win now. All it can do is lose more profoundly. So what does it do? It launches antagonistic suicide attacks against the people who are about to conquer it... the same people who just recently destroyed Germany's cities from the air.

No!..it can't be. This is one of those cases where world leaders act with such extreme infidel-killing stupidity that we realize how they must have been working for the Arab house of war.

And if this is the case, it makes perfect sense. The kami-kaze attacks were the Arabs in Japan working to give an excuse to their brothers on the American side. An excuse for America fire-bombing ALL of Japan's cities, ALL of them to the ground.

The red zones show here were burned to the ground by US aerial fire-bombing of Japan... and this is just 4-cities. pretty much all of Japan's cities were bombed in a similar way. This killed huge numbers of smart urban people as the Arab house of war generally aims for in a typical epochal-lyse.

And incidentally, the bizarrely ineffective bombing raid of Jimmy-do-little... that was not real. That was the Arabs in America framing war expectations among the Japanese. I say this because the biggest effect by far of the raid was to minimize the threat that was perceived by the Japanese people.

And thus Japan was completely unprepared for the fire-bombing that was to come... really an epochal-lyse that flattened every single one of Japan's major cities.

Also, we should note Jimmy Do-little's matrix name Do-little and the way it perfectly described how his bombing raid was supposed to do little damage... So the Japanese would not make preparations... so that as many Japanese as possible would die in the coming fire bombing.

### C18 Shizouka burned out

And then after the war, after the epochal-lyse, the Arabs typically come in and buy up land and stocks for pennies on the dollar. Thus they sort of surf the disasters and bubbles they causes in the house of war, surf them for immense empire funding profits.

Here's the obscure city of Shi•zo•uka. Nearly all of Japan's cities suffered a similar fate. Look the total devastation from the US firebombing. It was like in Germany after the war. There were millions of homeless Japanese that were totally desperate for money... in addition to the people who were dead and the people who were terrified of living in a city center.

The Arab frontmen must have gotten some real bargains before the Marshall plan money started making a difference in around 1949. You know the war ended in 1945 and the Marshall plan wasn't passed until 1948. So for 3-years there were some

real bargains to be had for land and company shares in both Germany and Japan.

And nobody really understood what a difference the Marshall plan money would make ... except the in-it Arab frontmen buying up assets for Arabs Incorporated, the world's oldest company.

### C20 WW2 bomber in flames

And when some of the bravest men in the free world volunteered to bomb critical Nazi industries... when half of them frequently did not return, what was the effect?

It didn't seem to slow German Industry very much. Maybe it was just an excuse for a 20-fold increase in the price of the ball-bearings that the Arabs had stockpiled. Do you really think the Arabs didn't know in advance that certain German industries would be bombed first?

### C21 Image of 3 at table

Do most wars involve 2 parties or 3? I mean, there certainly are the two parties fighting and dying... and in desperate need of super-expensive war supplies from abroad.

It certainly seems like there's normally a secret third party that lives among the two parties actually fighting the war. Its this third party that typically starts the war and it help people commit shocking acts of barbarity ... to prolong and increase the war... like the Kami•kazi attacks, and like how the Japanese soldiers would blow themselves up when they surrendered.

### C22 War puppets with scythe

This is so the war is as deadly, destructive, lengthy, and profitable as possible for the Arabs. This way the Arabs can sell their stockpiles of ball bearings and other things for more money.

And then after the war,  
the secret third party  
uses its fat war profits  
to scoop up assets for pennies on the dollar  
from the desperate survivors of the war.  
It also simply grabs the holdings  
of many families that have died out...  
In fact often helping the best families to die out.

There is much more about this subject in the written part of my message... under the title: The cause of all war.

### C30

#### The cornerstone flaw in your worldview

Most people fail to understand one cornerstone thing about the way the world works. They miss one thing that would change everything in their political and economic worldview. They miss the immense power of the Mideast.

There is this famous saying: "If you can't take Mohammed to the mountain, take the mountain to Mohammed". This is about how a billion Muslims

really can move mountains if they all take a bucket-full with them when they are going that way. So again, most people miss the immense creeping power of the Mideast... as well as the explosive but brief force of it's martyrs.

They miss how the desperately poor Mideast parasite race is always there feeding on the outside world... They miss how it's people must all work together over their generations to bend and shape any attitude and any practice they can in the outside world... so they can better feed on the outside world.

They miss how the parasite race must come to it's host in the outside world to survive, because it has no other way to survive. They miss how the only industry of the Arabs is feeding on the outside world. For without this evil ex-pull, the land of no resources has no way to survive.

### C31

#### Xenophon, Persian Expedition 3.2

"our [Mideast] enemies ... did not dare to make war on us until they had taken our leaders... because they thought that so long as we had leaders... we were capable of victory. They thought that we would collapse... once we lost our leaders."

New subject. In Xenophon, we read that <read>

Essentially the Arabs way of life requires that their various host societies occasionally act with great stupidity and all march off a cliff together. The main impediment to this is when we have good leadership. Therefore, job #1 for the Arabs is to get rid of our good leaders, and even our potentially good leaders.

In fact, the Arabs would prefer if the family lines of our leaders were all wiped out, so their offspring will not be a problem for the harem offspring in future generations.

This way the Arabs will be better able to profit from their human flocks in the future, when they they're lead to one of their periodic slaughters.

Wars are one of the main tricks of the Arabs for achieving this end. The first volunteers are all by nature leaders.

Then when the government starts drafting people into the army, the Arabs can frequently get control of the draft administration and run it as a **bro-cracy** ...namely a government administration that the Arab harem **brothers** rule. And in fact, in both Japan and Germany the draft selection process was TOTALLY opaque.

So the Arabs make sure to first pick all the people on their list of trouble makers or potential trouble makers... All the people on their anti-kal-laws list... Which they apparently check twice.

These men get drafted first, and also assigned to dangerous positions. Then once the second strata of potential leaders is gone, the Arabs move on to eliminating as many of the others as they can get away with.

### C32 God/devil image

Now it is worth repeating that the parasitic agenda of the Arabs is the polar opposite of whatever a normal person would EVER want for his own life or his own society.

We want to prosper, but our parasite wants us as poor, and desperate as possible.

We want freedom, but our parasite wants to make us it's slaves.

We want good leaders, but our parasite desperately needs ALL our leaders and even our potential leaders out of the picture and if possible dead. And this is so it can run our group efforts for it's own parasitic agenda.

### C33 Neo in sunglasses

Pretty much everyone on the outside of the Arab struggle fails to recognize how the land of no resources infiltrates most of the biggest organizations in the outside world.

Then it uses these big organizations to shape the group mind and group efforts of it's host societies... and feed on their economies like a parasite.

You know, it is much easier to crash a giant buffet in a ballroom than an intimate dinner for two.

Likewise, it is easier to feed on a giant monopolist than a bunch of small companies in competition with each other.

Also, it is much easier to feed on a government when it is run by one man than when it is run by 500. And it is much easier to feed on a government when it is run by 500 than 50,000 men.

So the force that is always pushing for more powerful monarchs and presidents and corporations and religions and billionaire oligarchs... That's the parasitic land of no resources, the Arabs. And it's because these men and these institutions are actually very often the Arabs in disguise.

### C34 Neo awake with tubes

Pretty much whenever you see one man in charge of an immense organization, be it a Howard Hughes, a John D. Rockefeller, a Russian oligarch, a German Chancellor, a hereditary king, a Russian Tsar, a caesar... a Pol Pot, or a North Korean dictator, you are looking at a figurehead or agent of the parasite's agenda...

And even in the nations that don't have dictators... pretty much all of our institutions have to some degree been corrupted by the Arabs. They corrupt or heavily influence our democracies, our big corporations, our religions, our big news outlets, our big film studios, and even the false anarchy of science and academia.

### C35 Bruce lee

You know, many of the world's politicians, uber-rich zillionaires, celebrities, and other influential people

ARE actually harem brothers.

When these are in positions of great power, they're often shape-shifters, or ectomorphs, basically Arab harem-spawn that don't look like Arabs.

And they have quadroons and octoors that are 3-quarters and 7-eighths non-Arab from every other part of the world. But because of their Arab fathers, they tend to be supercilious, a word referring to nose hair. That is the hair ABOVE the nose, their mono-brow, or just their heavy eyebrows... like Br-oo-se Ali shown here.

### C36

#### D'ot•ard = from'ear•man

And a great many of our leaders are Arab dotards like Howard Hughes. A dotard is a de-ot-ard, meaning a from ear man in ancient Greek, a man who does what he is told.

In other words, he goes along with his trusted advisors like a good Arab frontman. George Washington seems to have been Alexander Hamilton's dotard, and George Bush junior seems to have been Bandar's dotard.

#### C37 missile dick cartoon

Now ponder how the Arab frontman Kim Arab Mole, the ruler of North Korea recently called Donald Trump a DOTARD so everyone IN-IT would know that it is all Arab puppet theater.

You know, we really should stop talking to the puppets and start talking to the Arab hand. We would get much further with North Korea and Iran if we talked to the hand instead. Also talking to the nuclear puppets as if they were real does sort of encourage the hand to use its puppets suicidally.

### C40

#### Cassius Dio, d.235AD, Book 51

[Emperor Augustus] "not only put Maecenas in charge of Rome, but also the rest of Italy as well ... He delegated great authority to both Maecenas and Agrippa in all matters of government.

In fact, they were both allowed to read his imperial commands before he sent them, and then change whatever they wanted in these commands.

He also gave them a [letter sealing] ring for this purpose, so that they could re-seal his letters. He made a duplicate of the seal he used most frequently at that time. This was in the design of a sphinx... It was this [sphinx] ring that the succeeding [Roman] emperors all used"[You know, the Arabs have had frontmen running outside governments for thousands of years. And they have gotten very good at looking

like they are not there.

Here is a quote describing Augustus, the 2nd emperor of Ancient Rome after Julius Caesar seized power in 44BC.

So: firstly, Agrip•pa and Maecenas ruled Rome, not Augustus, the ostensible emperor.

And secondly, the emblem of nearly all Roman emperors was a sphinx. This strongly suggests that the famously brutal Roman Empire was an Arab front empire — like so many other nations run by brutal or br•oo•tel dictators.

#### C41 Signing scene from Gladiator

You know, MOST Roman emperors were assassinated after a very short time. The worst period being 69 AD, the year of 4-emperors... where 4 emperors were assassinated in just barely over a year.

And certainly, many Roman emperors lasted more than a decade. So maybe the rulers that lasted all answered the unspoken riddle of the sphinx Mafia... Namely, what does the parasite race want from their ornamental ruler, their odious rex, their hated king.

So the emperors that lasted were all probably dotards that just signed whatever their Arab-run administration told them to sign...

And if they didn't, they would be killed and replaced with a new front-man that would do as he was supposed to, or HE would get killed.

With this in mind, I would suggest that we all misunderstand the true nature of monarchy and dictatorship. All monarchs and all dictators are ornaments for the sort of government that maximizes the power of the Mideast. And the more repressive the government, the more firmly the outsider Arabs are in charge... for example North Korea.

#### C43 — Islamic star

How many men want to conquer the world? On the other hand, isn't the entire economy of the Middle east based on its management of the outside world?

Doesn't the parasitic Mideast grow rich and powerful through domination of the outside world and getting the outside world to give it something for nothing?

So world domination is **actually** the final objective of the Mideast.

And this is also the final objective of Islam... to make the entire world obey the religion of feeding the land of no resources.

And here we see the true meaning of the Islamic star... the main symbol of Islam. It is a house of 8-gables,

a compass rose,  
the symbol of a highly profitable monopoly  
such as OPEC in every direction  
with a trade paradise inside  
look at the doe and the plants inside the trade  
paradise in every direction

#### C44 Inside cover of book "see page 24"

New subject. Here's an organization chart from the US War Department's 1945 Handbook on German Military Forces.

#### C45 Organization chart close up

Look how Hitler had a 2nd in command, a man named Keitel. How come we never hear about this man Keitel, the man directly under Hitler, this man behind the man?

#### C46

#### US War Department's handbook TM-E 30-451, Ch1.3.2:

"*Hitler himself is the supreme commander of the armed forces (Oberster Befehlshaber der Wehrmacht)* (12)  
*Under him Keitel is the chief of the Armed Forces High Command (Chef des OKW)* (13) and as such serves as Hitler's chief executive officer in the administration of the armed forces and the application of his policies and plans."

To quote the US War Department's handbook,  
*"Hitler himself is the supreme commander of the armed forces... Under him Keitel is the chief of the Armed Forces High Command and as such serves as Hitler's chief executive officer in the administration of the armed forces and the application of his policies and plans."*  
How come we never hear about this man Keitel?

#### C47 Organization chart

The US War Department also tells us that Keitel had 38 duties in Nazi Germany, and Hitler only had 4 duties... vague figurehead duties... party liaison, interior group, armed forces guidance staff... and he also, famously, made the trains run on time.

Look at how Hitler only had 4 boxes, while Keitel had 38 boxes. How come we never hear about this Keitel or cartel guy who obviously ran Nazi Germany.

How come we never hear that Hitler was a high school drop out...a drop out like Pol Pot, the genocidal figurehead tyrant of Cambodia in the 1970s.

How come nobody ever asks if Kim Arab Mole with his iconic and ridiculous haircut is another Arab figurehead and escape-goat just like Adolph Hitler with his ridiculous and iconic mustache.

The iconic looking Kim certainly looks like he is being set-up as a hatred lightning rod... a lightning rod for World War 3. Perhaps when this disposable escape-goat nation nukes the land of the free on behalf of its Arab puppet masters.

We really must stop being distracted by the puppets.

And start talking to the hand  
the harem-bred hand,  
the floating part of the pyramid...  
the large groups of men  
with identical Y-chromosomes  
and dissimilar X-chromosomes.

#### C48 Oak tree art

How come nobody ever asks if the Arabs were behind the murder of their worst enemies, their own disloyal cousins the Jews. You know, after a while, the family lines of Mideast immigrants grow yellow, like leaves on a tree.

Then they stop producing nourishment and benefit for the tree. In fact, after a time, they start going in the opposite direction and draining nourishment and profits from the Arab tree of life.

And this is the real reason why the desperate Arabs hate their yellow-star Jewish cousins like me so much. So they kill them, their own cousins, whenever they have a chance.

And it's real easy for them to tell who is best friend, and who is worst enemy. Those that help or potentially help Mideast Incorporated are best friend. Those who harm or potentially harm Mideast Incorporated are worst enemy.

#### C49 Casablanca DVD cover

Do you have an ear for propaganda?  
Can you tell when the media is lying to you?  
Here's some old and primitive propaganda that's pretty easy to see through today.  
These scenes from the film Casablanca, the Academy Award winning best picture of 1943.

#### C50 Shoe warehouse

But first realize that Casablanca came out in the summer of 1942. This was just as Auschwitz and the other concentration camps were entering their 2nd phase: when their ability to kill and incinerate people jumped by about 20 to 80 fold.

Then this propaganda film played for an exceptionally long time in theaters. Month after month after month this film lingered in the theaters. And that is why it became such a cult classic.

#### C55 Concentration camp survivors lined up

Strange how the film Casablanca mentions concentration camps NINE times... And NINE times a way that hides and minimizes and makes light of the Nazi extermination mills that were **just then** switching into high gear when this film came out. And also note the **peculiar** way that the term concentration camp was so **obviously** forced into the

dialogue.

### C56 173C Casablanca clips

#### C57 Pile of corpses from camp

Again, isn't it strange how this film mentions concentration camps NINE times... and NINE times in a way that hides the true and hideous or hideous nature of these camps camps that killed over 6-million Jews that no longer believed in the religion of feeding the land of no resources.

You know, some lies tell the truth with perfect clarity once you realize they're lies... or propaganda. The only question is who made the Casablanca film propaganda?

Did Nazi propaganda chief Joseph Goebbels, manage to take his propaganda up about several notches—after his primitive comparison between Jews and rats? Clearly this is SOMEONES very sub tell propaganda. And clearly SOMEONE wanted the world to think of the Nazi death camps as something benign. Who was that?

#### C58 Epstein twins

Did the Nazis infiltrate heavily Jewish Hollywood? Did they trick them into covering-up the death camps that were tooling-up to murder 2/3 of the world's Jews? Did they produce Casablanca, the ACADEMY AWARD winning best picture of 1942? Or was this movie made by Arabs Incorporated?

Here are the twins Julius and Philip Epstein who according to a 20-18 special edition of Time-life were quote "the primary writers on Casablanca but annoyed Jack Warner by regular-lee arriving at the studio in the afternoon."

They sound pretty cocky don't they... Like maybe Jack Warner was working for them, or their group. Note the supercilious eyebrows. And note the way they are looking right into the camera ... like they know something... this is the way the INIT harem brothers look into the camera. If you look, if you just look, you will see many Arab and mixed race people doing this in the media today.

#### C59 Corpse in oven

The big death and incineration camps at Auschwitz and Treblinka had not even really started operation when Casablanca came out in the summer of '42. And two and a half years later, in early January of 1945, it was all over. Around 10 million Jews and other infidels had been starved down and then gassed to death... and their corpses incinerated like you see here.

And all it took was the S.S. Order of Death's Head being left alone for two and a half years in NAZI occupied foreign nations mostly.

### C60 Jumbled corpses

With Casablanca, we see pre-emptive propaganda, propaganda that was being filmed months BEFORE the real industrial-scale death camps opened.

Thus it is pretty clear that whoever made Casablanca was responsible for the NAZI death camps. Who was it that made Casablanca? Who was behind the massacre of all the yellow star Jews of Europe? Was this the Germans?... or was it the new green-star harem-spawn of Arabia?

### C61

#### Munich film. Here an Arab speaks

"All you Germans are too soft on Israel. You give us [Arabs] money, but you feel guilty about Hitler, and the Jews exploit that guilt. My father didn't gas any Jews."

[Here is a quote from the recent film Munich. Here an Arab talking. This Arab says <read quote>

This quote contains two lies which are underlined. The first lie is that the Arabs have mostly exploited the German sense of guilt. And Millions of Arabs have come to Europe due to this sense of guilt. The second lie is that it ACTUALLY WAS the fathers of these Arabs that were responsible for the holocaust.

And again, some lies tell the truth with perfect clarity once you realize they are lies.]

#### Munich film clip

#### Line of refugees

I mean, who's benefitted most from the death of Europe's yellow star Jews. The old yellow leaves on the Mideast tree of life. the descendants of people who left the Mideast The old yellow Mideast leavers, The people who are no longer loyal to feeding the Mideast? Who's benefitted most from their elimination?

Clearly it is the new fresh leavers, the fresh green leaves, on the Mideast tree of life, the new immigrants who are all still loyal to the desperate land of no resources.

I think we have all significantly underestimated the totally desperate land of no resources. And this is mostly because they try as much as they can to minimize themselves.... and to be invisible, and to cover their tracks... and to leave other groups as escape goats so they can get away with doing the horrible things they do.

### C62

#### Juvenal, Satire 4

"he robbed [or purged] Rome of her best and noblest sons, unopposed. No hand rose to avenge them. He could soak himself in their noble blood. But once the commons began to fear him, then he was done for." You know, we read again and again in the pages of history how the Arabs would kill the best and brightest of their host societies, so they would have an easier time as parasites.

### C63

#### Ammianus Marcellinus, 18.5

"the best of Rome was being spilled on both sides in a prolonged civil war."

#### Xenophon, Persian Expedition 3.2

"our [Mideast] enemies ... did not dare to make war on us until they had taken our leaders... because they thought that, so long as we had leaders... we were capable of victory. They thought that we would collapse from lack of control and lack of discipline once we lost our leaders."

**And finally we read again that** <read>

### C67

#### Auschwitz Nazi Death Camp — A publication of the State Museum of Auschwitz-Birkenau in Oswiecim Poland

"the Nazis killed Poles who they considered part of the nation's leadership strata, particularly the intelligentsia."

The Nazis invaded Poland on September first 1939... and the very next day they opened their first concentration camp in Poland, at a place named Stutthoff. This camp was located near Gdansk and was mostly for Polish Intelligentsia... more than 85,000 potential Polish leaders died in Stutthoff.

Was this the Nazis eliminating the smart people of Poland? or was it the Arabs going after the smart infidels in their human flock... The smart ones like me that have always made trouble for them over the centuries?

### C68

#### Herodotus, 5.92

"he kept cutting off and killing all the tallest and best stalks of corn that he could find, until the finest and best-grown part of the crop [or the flock] was ruined..."

It was perfectly plain to him that Thrasybulus recommended the murder of all the people in the city who were outstanding in influence or ability. He took this advice, and from that time forward, there was no crime against the Corinthians that he did not commit."

[Herodotus is a man from present day Turkey. And here he is saying of someone that <read quote>.

This certainly sounds like an Arab advising future generations... but hiding his messages in metaphors... because it is too hideous and can never be spoken.

Also, the Core in theans are not the victims of this crime, but the ones committing this crime against the entire rest of the world.]

### C73

#### Procopius, c.565 AD, Secret History, 10.3

"When a man cares nothing for the infamy of his actions [because he is using an escape goat] and does not hesitate for fear of being known as a revolting character, no path of lawlessness is closed to him, but armed with the shamelessness visible at every moment in his face, he advances cheerfully and without any misgivings to the most loathsome deeds."

[Thus it seems that the Arab have been leaving escape goats for thousands of years... and have greatly refined their techniques.]

### C69 Egyptian sphinx

It seems that we have underestimated the ancient Arab house of war, the Dar al Harb, the give them war, or give them harm... Because it has always been there since the dawn of history. Because its sphinx-like, and silent and mysterious. And because it takes every effort, to minimize itself, to be invisible, to cover its tracks.

### C70 Gorgon

And we have failed to recognize how the parasite race will use any means at all, no matter how revolting and hideous to reduce and dominate its host societies and thus grow more prosperous as a parasite.

### C71

#### Marco Polo, Ch. 3

"He remembered the hated belief of the Saracens [the Arabs], by which every sin is regarded as a lawful act for men not of their religion, even killing a man."

<read quote>

You know, the totally desperate land of no resources Isn't burdened by a concept of fairness, or fair play, or mercy, or forgiveness. Because they're totally desperate

And the way we are burdened by these things is mostly from their religions and their propaganda.

## C72

### Marco Polo, Ch.1

"It is a fact that all the Saracens [the Arabs] of the world are united in wishing harm to all the Christians in the world."

<read quote>

## C74

### Polish Proverb

"Where two are fighting, the third one is profiting."

You know, its a polish proverb that <read quote>

## C75 Image of 3 at table

Again, do most wars involve 2 parties or 3? You know, if you read enough history, you get the distinct impression that most wars involve 3-parties.

## C76

### 636 to 732: Islamic Conquest

### 626 to 762: No water in Europe's main city

Do you realized that the world is still contending with the same parasitic empire that ended democratic Athens and Rome?

Do you realize that according to the Res Gestae of Emperor Augustus, that metropolitan Rome had a population of over 5-million people, but during the European Dark Ages, no city in Europe had a population of over 25,000? That is a population decline of over 99.5%.

Do you realize that the European Dark Ages precisely bracket the "great age of Islam"? Do you realize that the Islamic conquest started 10-years after Constantinople's aqueducts were cut?

And then the Islamic conquest ended 36-years before the aqueducts were re-connected... Constantinople being the main city of Europe at the time.

Our weakness is our parasite's power. And our parasite knows this fact very well. And the Arabs will make history repeat itself and take the whole human enterprise down the tubes again if we don't wake up.

## C77 Cloud Atlas exploding dog collar

The Meccan machine has its hooks in again, and it will take freedom and democracy and human populations down the tubes again, unless we wake up.

Soon it will be some version of remote control exploding dog collars

for the rest of the world if we don't wake up.

And the chosen harem brothers, the Ali Bari will get the space-age white ships. The rest of humanity will get nothing but war, plague, tyranny, suffering and annihilation just like when the Arabs reduced European populations by 99.5% after the fall of Rome.

## C79

### It is totally futile

You know, the Arab struggle, the Arab mechanism does work to feed the Mideast from moment to moment. But over the long run, it is totally futile for all mankind including the Mideast.

This is because whatever small advantage the overbreeding of chosen harem spawn brings to the human gene pool, it can never overcome the massive degradation that Arab cultural meddling causes among the rest of the gene pool.

I mean how will even 100-thousand chosen harem spawn overcome the degradation occurring among the other 7-billion people on the outside.

That is 70,000 to one.

Thus mankind has actually been devolving for thousands of years with Ishtar at the helm.

And you can't speculate on your own because your network of 100-thousand is 4.9-billion times slower than the network of the 7-billion people on the outside... and that is just in the first generation.

So you need to breed with the outsiders. Thus the degradation you cause in the outside world brings you down as much as it brings us down.

## C80 Arab population growth

Here we see what 45-years of oil hoax money has done for Arab populations.

Here is what the current Arab struggle machine seems to exist for—to breed billions of loyal Arab slaves to take over the world again.

Then when these have taken over the world, their descendants will mostly become the mortal enemies of the new harem spawn, their 2nd and 3rd cousins back home. Again, Ishtar is totally futile over the long term.

## C81

### Angels and Demons film

"The Illuminati were infiltrators. There wasn't a powerful organization in the world they didn't penetrate. Including the Vatican by hiding in plain sight."

New subject. If we assume the illuminati are just an Arab fabrication, or a scapegoat... who is this quote really about? "The harem brothers were

infiltrators. There wasn't a powerful organization in the world they didn't penetrate. Including the Vatican by hiding in plain sight."

### C82 Arabia map

Do you realize that for thousands of years, distinctive-smelling frankincense tree sap has only been grown in Arabia... and that the Arabs have had a absolute monopoly on this pine tree sap for thousands of years... since before the time of Rome.

Do you realize that at many times throughout history, this stupid pine tree sap burned as a sacramental incense sold for more than its weight in gold?

### C83 Censor image

What immense power the Arabs have over the world's religions if they can get them all to buy their super expensive pine-tree sap as an sacramental incense.

What wealth the Arabs acquire from our people when they pour out money to a church that turns around and squanders it on Arabian pine tree sap selling for nearly its weight in gold.

The Catholic church still burns Arab frankincense tree sap... and so do the Hindus... The Buddhist now burn a different sort of incense, but it is easy to imagine that they previously burned Arabian frankincense.

Strange how pretty much ALL the world's major religions burn super-expensive Arabian frankincense as a sacrament. That is except for Arabia's own slave religion of Islam

And you know, according to several mentions by Bernal Diaz, the Aztecs also burned tree sap as an incense. And they also circumcised their men.

And according to Juan De Grijalva it was foretold that "[men with beards would come from the east and rule over them.](#)"

So apparently the Arabs are behind all the world's religions. And with the genocidal Aztecs and their cannibal priests, we see how truly awful an Arab religion can become if we all just go along with our Arab shepherds like good little sheep.

### C85 anti-Catholic

How much of the money people give to the Catholic Church leaks out the back door, to be squandered on super-expensive Arabian Frankincense? NOBODY KNOWS. Nobody knows because religions are not required to file financial reports with government. How convenient this is for the parasitic land of no resources.

### C86 Under the thumb

And certainly, none of the many child molesting Catholic priests are going to rock the boat. These priests are pretty much all total thumbs-men, firmly under the thumb of those who know about their secret

child molesting habits.

They're actually under the thumb of the same Arabs selling their church super-expensive TREE SAP as incense. The same Arabs setting church policy about abortion and pre-marital sex and divorce and usury.

USURY incidentally is when Catholics lend money to others and charge interest, and compete with the Arabs when they lend their stolen money back to their host societies. And as usual, the Arabs just HATE competition and do whatever they can to prevent others from competing with their rackets. That's the real reason usury was severely punished by the Catholic church.

And the total Catholic prohibition on divorce, abortion, and especially sex outside of WED-LOCK is mostly about keeping the best men in the host part of the world from having many too many offspring. This way the harem... which means forbidden breeding strategy of the Arabs can stay one step ahead of the host part of the world.

### C87 Confessional

And let's not forget catholic confession, where the flock had to tell their thumbs-man priest all about their sins, so their Arab minders know who to put on the anti kal laws list and then quietly whack in the next purge.

### C88 Bishops in assembly

Now I don't mean these particular guys shown here. This is just some image from the internet.

But a lot of people are puzzled about why the Catholic Church is [so full of child molesters and child rapists...](#)

It is simply that the evil ex-pull of the desperate land of no resources is running the Catholic church for its own benefit. And they choose child molesters as priests because they make such devoted thumbs-men, or front-men. In effect they are all being blackmailed... so very few step out of line.

And these pedophile priest front men also help make many infidel boys grow up into non-reproductive homosexuals.

Thus there are fewer infidels born... and also, more excess women for the faithful to spawn with and to make more shape-shifters and ectomorphs with.

So yes, the Catholic church, like most of our institutions is run by the evil ex-pull of the parasitic land of no resources. And again, great good is the best mask for great evil.

### C89 deep drilling ad

We've also underestimated Arab power over our oil companies... entities that corruptly sell voting rights by the share... out in the open... in stock markets.

Just consider this magazine ad. Why do our oil companies need to pour out millions of dollars on

ads like this?

Why do they need to tell us how all the cheap and easy oil is gone? If they were genuinely interested in maximizing oil output, or at least in making money, why didn't they ever run ads asking for reduced environmental penalties, or more places to drill on land?

Isn't this ad really OPEC's message?... to make oil seem harder to reach and more valuable? Funny how OUR oil companies are running OPEC's propaganda messages. Maybe they are also doing lots of other things OPEC's way... Like being ineffective competitors.

So it seems that we have underestimated the power of the Arabs to corrupt our corporations as well as our religions.

### C90 WSJVB

And this headline was permanently displayed on the front of the Wall Street Journal's sidewalk vending boxes for at least 6 years. It is propaganda about deep oil wells 2 miles down in the Gulf of Mexico.

It is a great example of Arab power over our openly corrupt paid commercial media companies. Thus Arab money and power seems to have turned all the Wall Street Journal's sidewalk vending boxes into mini propaganda billboards.

So clearly the Arabs have corrupted our ostensibly free media — just as they have corrupted our companies, our religions and our ostensibly free democracy and our ostensibly free scientific establishment.

So with all these corrupt institutions, taken together... where does reality end, and the Arab matrix illusion begin? Where is the edge of the political, economic and cultural matrix? What is real and what is Arab matrix illusion?

### Part D: Embargo time

#### D0 — 126 Front-line image

Where are the documentaries about the Arab oil embargo? Are there any at all?

#### D1 Roadway picnic 1973

And where are the websites and books that explain the strange and contradictory way America became dependent on Mideast oil? And how come fuel... just wasn't available at ANY price?

And here's a road-picnic staged in the middle of a highway. How come our roads were deserted, truly deserted in so many places... and there still wasn't enough gas.

You know, the traffic levels tell the truth about how much oil was actually sold... And there are millions of witnesses. And all the statistics that contradict this are lies.

#### D2

##### In 1970 the US imported 3% of its oil

##### In 1977 the US imported 43% of its oil

You know, according to energy department statistics, the US only imported 3% of its oil in 1970, and up until just before the embargo it was still only 11%.

So the question is:  
How on earth could an 11% cut in our oil supply cause our nation's traffic volume fall by 40%  
... or even by 20%?

So the official 11% number is an understatement  
And we must have been importing  
much more Arab oil than the official statistics say.  
So there was clearly a lot of oil smuggling going on.  
And thanks to a tariff and quota system,  
domestic oil cost a bit over 3-dollars barrel,  
while foreign oil cost about 2-dollars a barrel.  
So of course there was smuggling going on

Also, according to the official statistics,  
the US imported 3% of its oil in 1970  
and by 1977 it imported 43% of its 1970 oil-  
consumption.

So the question is,  
how did the Arabs have an embargo and starve us of  
their oil, while at the same time they grabbed an  
added  
a 40% market share?  
So here is another aspect of the official  
US energy department statistics that doesn't make  
sense.

#### D3

##### Time Magazine, 1974.01.21

##### "The country has become dependent on the Arabs for a pivotal 11% of its oil"

And let's not forget about energy conservation.  
Over the course of the embargo,  
the cost of oil rose 10-fold  
from \$3.30 to \$34 a barrel.

And there was a HUGE recession as a result,  
and because of this, we needed much less oil.  
And there was also a HUGE conservation effort.  
We turned our thermostats down.  
We drove a lot less,  
and we lowered the speed limit to 55 miles an hour.  
And also in the first part of the embargo,  
there was simply wasn't enough oil to go around.

Now the US was only importing 11% of its oil  
in the first month of the embargo  
How come our conservation didn't turn us into oil  
exporters? How come the Arabs instead grabbed  
40% of our 1970 oil market?

#### D4

##### **America was dependent on smuggled Arab oil**

The simple truth is  
that the Arabs didn't grab a huge share of the US oil  
market DURING the embargo.  
They actually did this well before they cried embargo.

There was a huge amount of oil smuggling  
going on before the embargo,  
when nobody was paying attention.  
Then, just before the embargo,  
all at once, the Arabs stopped selling this smuggled  
oil,  
this backdoor oil.

And we NEEDED the fuel.  
So we bought it from the front-door oil market.  
And THIS is how the Arabs simultaneously  
starved us of their oil AND grabbed 40% of our  
market.

They starved us of their back-door smuggled oil,  
sending the demand to the front-door oil market.  
And on this market, there simply wasn't enough oil to  
go around. ...  
and prices were up to 17 times higher  
than the smugglers were paying for the same Arab oil.

#### D5

##### **Time Magazine, 1974.01.14**

"There is so much new drilling planned that a  
shortage of tubular casing, drilling platforms and other  
equipment has developed."

These words were written  
about 4 weeks after the Arab oil embargo began to  
bite  
in December of 1973.  
So it seems like the Arabs either  
bought-up or booked-up a great many of our drillers  
and oil well drilling equipment companies.

And at this time, the cost of drilling for oil went sky...  
that is IF the driller was taking hefty deposits  
on new jobs to be completed more than a year in the  
future.

And nearly everyone thought the embargo  
was just a temporary thing.

And the real reason why America  
was unable to find any new oil  
given a 10-fold increase in prices.  
is because the Arabs didn't just have their people  
running our giant oil companies,

they also ran many other parts of the industry  
And they made every reasonable effort  
to seem like they weren't there.

#### D6 LSD one dollar

Also drugs started becoming stylish  
in around 1967,  
about six years before the Arab oil embargo hit  
in December of 1973.  
Consider how distracted we suddenly became  
with sex, and drugs, and parties, and music,  
and enjoying our lives ...  
right when the embargo hit.

#### D7 Hippies smoking pot

What a coincidence that drugs went totally  
mainstream  
just a year or two before the 1973 oil embargo hit.  
Nowadays, the media characterizes the  
1960s  
as the big drug era. But that is not really true.  
A cover from Time magazine in the autumn of 1969  
said that only 9% of Americans had TRIED marijuana.  
So drugs actually went totally mainstream in the early  
1970s,  
in the two or three years before the December 1973  
embargo.

Then in around 1981, just as the 2nd phase  
of the oil embargo was ending, the new wave  
appeared, the new music, the new style that wasn't  
nearly so into drugs and casual sex.

What a coincidence how the extreme  
relaxation in morals precisely brackets the high oil  
prices of 1973-1981. So judging from the timing  
at least,  
it sort of looks like this relaxation in morals  
was NOT an organic natural thing  
that happened in our society all by itself.

And it certainly looks like  
it was the embargo people  
who corrupted our media  
and steered our herds to suit their own agenda.  
After all they were the main beneficiaries, weren't  
they?

#### D10 Nixon resigning

What a coincidence the way the Watergate scandal  
broke in 1973, just months before the oil crisis hit in  
December of 1973. This obviously distracted our  
president, our uber-powerful, 4-year elected monarch.  
In fact when Richard Nixon resigned, he even said  
"America needs a full time president".

#### D11 Stop the war now

What a coincidence that our nation was totally war  
phobic from its experiences in Vietnam and  
Cambodia. In fact, the Vietnam war pullout didn't  
even finish until 1975, 2 years AFTER the oil crisis  
began. Perhaps the Arabs were afraid of what we

might do if we found out.

#### D12 JFK

What a coincidence

that the two brothers

who would have ended the stupid war in Vietnam  
were both assassinated.

John F. Kennedy was supposedly assassinated  
by a man who claimed to be a patsy or an escape  
goat

who was quickly assassinated himself,

And his brother Bobby Kennedy was  
assassinated by an Arab named Sirhan Sirhan, who  
was a Christian but so what... he was still an Arab.

And it is also worth mentioning that Wahdi  
Sirhan is on the exodus route that all the harem bred  
kids take when they leave Arabia.

#### D15 F-350 AD

What a coincidence that just before the embargo our  
government imposed vehicle emission standards that  
significantly lowered mileage. Also, note how Standard  
oil became not just Exxon, but also Chevron.

And what a coincidence that the LAST of the  
baby boomers born in 1964 were turning 16 in 1980  
and getting their driver's licenses, just as the 2nd  
phase of the embargo was winding down.

#### D16 Free love

What a coincidence

that people suddenly started having sex much more  
freely  
in the years before the oil embargo.

And then in 1983, just after oil prices fell,  
HIV/Aids hit  
and caused a sudden re-tightening of sexual morality.

And we should also consider how HIV/Aids  
stories were suddenly JUST ALL OVER THE MEDIA  
starting in 1983... and many people became afraid to  
have sex. Thus our sexual drives were bottled up  
again to be released when needed.

#### D17 Bruce Dern with knife

And just before the embargo, hitchhiking suddenly  
became much more dangerous. Here is an image  
from a film called *Thumb Tripping* from 1972. In this  
film, a hitchhiking couple is held at knife point by the  
crazy guys who picked them up.

The film *Breezy* from 1973 also showed the  
bad things that happen to people who engaged in  
ride-sharing and burning less gasoline...just before  
the 1973 oil embargo hit.

In fact, there were many anti-hitchhiking  
movies and scenes at the time, as well as some real  
life murders.

This caused more of the huge baby boom generation  
to get cars and drive instead of sharing rides... right  
around the time of the 1973 Oil Embargo.

#### D20 Breezy with William Holden

And just before the embargo,  
there was lots of media like the film *Breezy*  
that showed older men dating the girls  
of the huge baby-boom generation.

Here we see 50-something William Holden  
dating 19-year old Breezy.  
Was this film a natural and organic product  
of an American film maker?

Or were the Arabs producing media  
to help assure the distraction of America's older  
men...  
just before their embargo hit?

And surely many older men  
must have started thinking about sex with the new  
generation after seeing the many long scenes with  
Breezy topless.

#### D21 America on the moon

And lets also remember that it was Americans  
that first landed on the moon in the summer of 1969.  
And 24-years before that,  
we defeated Japan and Germany AT THE SAME  
TIME.

We were by far the RICHEST and most powerful  
nation in the world.  
Freedom had defeated tyranny,  
and it was Miller time. It was time to relax,  
time to party, time to enjoy life,  
time to take life a little easier,  
time to make life a little easier,  
as the endless Jack in the Box television ads told us.

#### D22 Bullfighter

You know, the Arab oil embargo  
never got a proper investigation at the time.  
Everyone was just so distracted  
by all the things the Arabs threw at us.  
And besides, it was supposed to be  
just a temporary thing...

#### D23 Arab population growth

And here we are 45 years later and it isn't a  
temporary thing. In fact now Arab populations have  
bloated by many-fold. <pause>

#### D24 Eisenstadt v. Baird in 1972

You know, America's Supreme Court only made birth  
control pills available to unmarried women in all states  
in 1972... in the year before the embargo.

#### D25 Supreme court photo

And America's supreme court only made Abortion  
legal in 1973, just months before the embargo hit.  
And regardless of what you think about abortion and  
birth control, you must admit that these court decision  
caused many more people to follow their passions.  
And this was surely a big distraction for many people  
right when the oil embargo hit. Again, what a

coincidence.

So if you want evidence that the Arabs can corrupt and steer the US democracy, look not further than the timing of the Roe versus Wade and the Eisenstadt vs. Baird decisions.

Also, the decision to allow abortion is one of the most important and most contentious policy changes that our democracy has yet made.

Strange how it wasn't even made by people we elected ... but by an oligarchy of nine lifetime appointees... 9 elite lawyers... or LIARS as they are often called. Are these appointee liars a check or balance for our ELECTED legislatures? Or are they a backdoor to power over them?

#### D27 Alaska fields

The Alaska oil pipeline is another good example of the Arabs corrupting the US government in support of their embargo.

With this stupid boondoggle, our government was encouraging people to drill for oil on the NORTH shore of Alaska. This is THE coldest, THE most remote, THE most expensive part of the nation to do anything in. Why did our government build a pipeline to our nation's MOST remote oil fields?

And why did it take us almost 4-years to do this?

You know, our nation went from the edge of economic depression in 1941 to vertical output in 1944.

Why did it take us 4-years to bolt-together a stupid pipeline?

#### D28 Alaska oil pipeline image

Anyway, once we got the Alaskan oil out of the ground, we used part of the oil to heat the other part from near freezing to near boiling, or 80° Celsius. This is so the oil liquifies and flows through the 1,300-mile insulated pipeline... which is on stilts and has heatsinks, so it won't melt the delicate frozen ground, and harm the delicate life-forms supposedly living in the FROZEN ground.

Strange how we never bother with stilts when we build roads to USE OPEC's oil. It is only when we are building pipelines to carry oil that COMPETES with OPEC, that we have to be careful about the environment.

#### D29 Road kill

Also, nobody ever says anything about the tens of millions of poor animals that die EVERY year as roadkill. Did you know that 1.2-million deer are killed by vehicles each year in the US alone.

None of our roads are up on stilts because of the environment.

And how many are even fenced? So why **did** we need to put a stationary and insulated oil pipeline up on stilts, except to delay it and make it more expensive.

And how many animals are ever harmed by FENCED oil wells? Strange how we forbid all new oil drilling on our public lands. But unfenced, animal slaughtering, oil burning roads are just fine, even in our national parks.

#### D30 Alaska fields

Strange how the Alaska oil pipeline passes over THREE mountain ranges...when it could have easily passed over just one mountain range. And you do realize that this stupid pipeline is just to REACH the oil tankers that ship and import this domestic oil to the lower 48 states.

### Part E: Our corrupt government

#### E1 Trusts sitting in congress

You know, these FACTS about the Alaska Oil Pipeline are no exaggeration. Here we see our democracy's response to the Arab Oil Embargo.

Clearly our democracy is corrupt and clearly, during the Arab oil embargo, it was the Arabs that got us to drill for oil in the coldest, the most remote, and the most expensive part of our nation.

Clearly our democracy of 1-in-a-million elected oligarchs is powerless to take action against its true masters, the Arabs... its main downstream campaign contributors. And clearly with the Alaska oil pipeline, we see that the Arabs can actually direct our government when they need to.

#### E2 Biggest companies chart

New subject. To see the Arab involvement in OUR oil industry, just look at how for 155-years, off and on, Exxon has been one of America's biggest companies, and frequently it was America's biggest company.

#### E3 Original Drake oil well

Exxon slash Chevron was there RIGHT at the beginning of the oil industry when it was called Standard Oil. The world's first oil

well was drilled in Titusville Pennsylvania in 1859. And only 3-years later, John D. Rockefeller built the world's first oil refinery in Cleveland, about 100 miles away.

#### **E4 Standard oil — octopus**

This world's first refinery was rolled into Standard Oil. Remember Standard Oil from high school, Remember its famous market abusing tactics — tactics that sucked money from the US economy just like OPEC does today.

Funny how Standard Oil is never presented as OPEC 1.0.

Funny how nobody calls John D. Rockefeller an Arab ornament, a frontman like Howard Hughes, Cornelius Vanderbilt, J.P. Morgan, John Jacob Astor and the rest.

Standard Oil was the biggest and baddest of the trusts fronting for the Arabs. And here we see Standard Oil's tentacles grabbing hold of America's corrupt legislatures, as well as the American people. And one tentacle is reaching for the White House... rather like OPEC's power today.

#### **E5 Standard oil and railroads**

Here's another old political cartoon depicting Rockefeller's Standard Oil... which not only ran the US oil industry, but it also ran the railroads, the transportation industry of the time.

#### **E6 Coal trust**

And there were lots of other Mideast-fronting trusts... really just giant industry dominating corporations that were riding the American consumer for whatever they could get.

Here we see the Coal Trust riding the consumer.

It was trying to get the American consumer to jump over \$8 a ton for coal, but later the price would be put up to \$9 and then \$10 a ton.

#### **E7 Railroad corruption 2**

And it is worth repeating that the Arabs just hate rail travel due to its unbeatable energy efficiency. Here we see how the US rail industry suffered from archaic regulations and crushing taxes.

#### **E8 Railroad corruption 3**

Then when automobiles came along, people couldn't wait to get away from the railroads that were made to be as expensive, awful, time-wasting and dangerous as the Arabs could get away with... sort of like with the energy efficient

domestic air travel industry today..

The Arabs after-all sell several times more oil when we drive our single passenger cars a few hundred miles between cities.

#### **E9 Trusts squeezing the consumer**

Then as today, most Americans just hated the monopolist trusts secretly fronting for the Arabs. They hated the high cost, the profiteering and the market manipulations that constantly squeezed more and more from the American consumer.

And we can see this sentiment in the laws passed by Congress. For example the Sherman Anti-trust Act of 1890, which didn't really have any effect for over 20-years.

#### **E10 An idle threat cartoon**

In all, for about four decades, the thoroughly corrupt US democracy wouldn't listen to the people. As usual, the corrupt government of the people, by the people, and for the people was powerless to take action against the feeding tubes of the Arabs, its true masters. So the Arabs stole with relative impunity for about 40 years using various trusts more accurately called monopolies as frontmen.

#### **E11 Trusts and Republican campaign funds**

But by 1910, everyone, literally everyone, saw the corruption and overreach of the trusts, and most people turned against the Republican party as a result.

After this, the Arabs could no longer get away with stuffing ballot boxes and the other election shenanigans that have always plagued our democracy.

So in 1910, the Democratic party took the House of Representatives. Then in 1912 it took both Presidency and the Senate.

#### **E12 1911 the US Supreme court broke up Standard Oil into 34 pieces**

After 1910, the Arabs had to make a big change, and if they didn't they might have crashed the matrix, or SHOCKED THE MEEME KEY, or key idea as Peter Gabriel once chanted.

In other words, people might have tried to re-write America's prototype democracy. So the Arabs had the US Supreme Court break Standard Oil up into 34 pieces. Although they broke Standard oil up into territories,

and in a way that didn't actually interfere with its ability to monopolize the US oil industry.

So after Standard Oil was broken up, that wasn't the end of this imaginary entity, this fictional citizen fronting for Arabs incorporated. I say this because over the following decades Standard Oil slowly grew back together again as a big market-swaying oil business. Now it's both Exxon and Chevron

#### **E14 Exxon gas prices**

Doesn't it strike anyone else as strange how the only Arab resource should be repeatedly super-expensive due to some giant faceless entities cornering the market for the stuff.

Certainly we didn't kill Arab-fronting Standard Oil in 1911. It seems we only forced it to play dead for a while. And today, the 156-year-old, and much hated Standard Oil company still largely exists under different names... that of Exxon, Chevron and OPEC mostly.

And the profit money flows to the Arabs through completely different Meccanisms. But the end result is the same. We overpay for oil, and the Arabs make lots of money selling us oil.

#### **E15 Jorge Santayana**

**"People who can't learn the lessons of history are doomed to repeat it."**

Here with Standard Oil we see a great example of how the parasitic struggle of the Arabs is a relentless and multi-generational thing.

After 50 or 70 years, when the people who experienced the first set of events have died out in the host society. The Arabs will frequently try a similar scheme with later generations.

And if the Arabs can record history in a vague or defective way... If they can hide the lessons of experience from the new generation... Then the revival can come sooner and be more profitable for them.

So the Arabs make sure their parallax history, their historical fictionalizations... their slightly skewed memories and interpretations of events are recorded and remembered for future generations...

In other words, the Arabs pay close attention to the Tree of Knowledge, also lately called the Matrix. They do this because they know that: <read quote>

#### **E16 Report of the Pujo Committee, 1913.02.28**

The 1913 report of the Pujo Committee of the US

House of representatives is quite an interesting document. It says that men from a handful of Banks dominated the boards of America's biggest companies.

For example, the directors of the firm J.P. Morgan and company held 72 directorships in 47 of the nation's greater corporations.

So here we see how a few opaque financial companies controlled the monopolies that ran the US economy up until about 1913. Did we ever really stop this sort of thing, or did we just drive it underground, as with Standard Oil which is now Exxon and OPEC and Chevron?

And you know, WW1 started the very next year in 1914... and then everyone mostly forgot about taking back control of America's industry. Boy that war really distracted us and saved the Arabs.

So I guess now we all now understand why the Arab puppet figurehead Kaiser pushed Europe into WW1.

And if there are any nuclear attacks or plagues in the near future, we should have no doubt about who it was behind them, or what message they are trying to stop.

#### **E17 Pork barrel spending**

Here's a political cartoon from 100-years ago. I guess things never change. Then just like today... the giant fictional citizens fronting for the Arabs were the prime beneficiaries of the government's pork barrel spending.

You see, on one hand, we have this totally corrupt congress that only really works for the rich corporations or trusts fronting for the Arabs.

And on the other hand these Arab-fronting corporations were the prime beneficiaries of the government's pork barrel spending.

When did this stop? Did it every stop? Or is America's corrupt congress still passing tax reform bills that primarily benefit the corporations and uber-rich people fronting for the Arabs?

#### **E18 Trusts sitting in congress**

In high school history class, we learn about the evil market manipulating TRUSTS or monopolies that reigned in America from around 1870 to 1911.

The way people felt about these trusts was very well stated in this political cartoon titled "The bosses of the Senate".

Note how the people's entrance is closed, but there is a giant entrance for the fat-cat Monopolists fronting for the Arabs. Note the sign that says, "This is a senate of the monopolists, by the monopolists and for the monopolists".

So the question is: If these monopolies and giant corporations are all mostly fronting for the Arabs, when did we the people actually start having a genuine democracy? And did we ever have a real democracy?

### **E19 — Civil War pic**

Or is it all just a giant illusion of democracy that has no power to take action against its true masters, the Arabs, now matter how horrible their feeding is.

Here we might consider how the land of the free initially allowed slavery in its 2nd constitution the present constitution.

This while less than 13% of the free population of the nation even lived in the slave states at the time. And most of these people did not own slaves. In fact, no more than 2% of the nation was seriously invested in slavery.

Isn't it strange how we allowed slavery in the land of the free when such a tiny portion of the nation's free population was actually invested in slavery? And stranger still is how our constitution allows slaves to be counted in the calculation of congressional representation.

And at any time, we could have easily said no more new slaves. And this would have made all the existing slaves more valuable, so the existing slave owners would have actually made money on the phase-out of slavery.

Instead we fought the US civil war over slavery, a war that is still our deadliest. In fact, more American infidels died in this TOTALLY predictable and totally preventable civil war than any other war in US history.

So again, how come our constitution once allowed slavery in the land of the free? And clearly our current US constitution is far from perfect

### **E20 — Drafting Declaration of independence**

And look at how the 39 men who wrote our current constitution sent it for ratification without a bill of rights. You know, each of the 13 state constitutions had a bill of rights.

It's just crazy that the new national constitution, the new law of the land, could have been sent for ratification without a national bill of rights. Without this, the state bills of rights could have simply been swept away by any laws of the national government.

And even crazier was how Alexander Hamilton and the other federalists REPEATEDLY spoke out against including a bill of rights at the various state ratifying conventions. I mean, why not include it? And why go out of your way to speak out against including a bill of rights. It just doesn't make any sense.

The only answer that really makes sense is that Alexander Hamilton and some of the other men who wrote the current US constitution were actually Arab moles that were not trying to help the cause of freedom, but to hinder it as much as they could get away with.

Did you know that Alexander Hamilton came from the Caribbean?

Did you know that Thomas Jefferson called Hamilton a Creole bastard? Which doesn't mean African, but someone of mixed African, European, and Moorish blood

And look at the swart complexion of the important Federalists

John Adams, Aaron Burr, John Jay, and Hamilton It's nothing remarkable today, but it was then. Although nobody imagined that there was this tiny desert kingdom halfway around the planet that was behind all the monarchies that we rebelled against in 1776

Nobody imagined that there was this parasitic tick nation that was quietly supporting and using those monarchies and dictatorships as a source of income. And that it was mostly this nation's feeding, its stealing, and its wars for profit, that American freedom lover so hated about monarchy.

And nobody imagined that the Arabs had men in pre-revolutionary America, quietly getting rid of our true leaders and installing their own men as replacements.

And nobody imagined that the constitutional convention of 1787, the convention that wrote the current US constitution, the 2nd US constitution.

Nobody imagined that this was Arab sham and a way to make the democracy of the land of the free into a broad oligarchy.

### **E21 — rep ratio graph**

Do you realize that under the 1st US constitution, the Articles of Confederation, that there were over 2,000 lawmakers in the United States. This was a little less than one lawmaker per thousand people.

Today our nation of 300 million people has 435 Representatives, about one lawmaker per 700-thousand Americans. So our broadest legislature is today 700 times more oligarchic than the legislatures of the first US constitution. But in our 100-man senate we have one lawmaker per 3-million Americans.

And this legislature is about  
3-THOUSAND times more oligarchic  
than the legislatures of the first US constitution.

And then finally our new laws must be approved  
by the nation's elected constitutional monarch that  
serves for 4-years.  
Our super-powerful president  
and his non-elected administration  
can veto any measure our legislatures pass  
unless both legislatures agree 2-to-1 to override his  
veto.

So basically unless our congressmen  
get really riled up by a 2-to-1 margin about some  
issue,  
our monarch president rules the nation.

And Mr. president is just one man  
So pretty much everything devolves  
to his unelected administration  
And this is pretty close to the way things worked  
under the monarchies that we  
supposedly rebelled against in 1776.  
So US-style democracy today is really just an illusion,  
an Arab matrix illusion.

In the new democratic design I propose,  
a nation of 250-million voters  
will have 1-million part-time, unpaid Sub-Senators,  
100,000 full-time Main-Senators and  
10,000 full-time Over-Senators

This is a representation ratio in the  
democratic sweet-spot where our lawmakers are too  
numerous to corrupt, yet not so numerous that our  
nation can't afford to payroll them.

Also, our Main-Senate will be so numerous  
that it can be divided into 10 specialized channels or  
sluices of about 10,000 Senators each. Thus we will  
have a 10-channel democracy that is 10-times faster  
and smarter than our current single channel  
democracy.

And this is not counting the fact that each  
sluice will have about 23 times more elected officials  
than our broadest house of government today.

And with so many annually elected people,  
there will be very few high-level government roles that  
are managed by appointee bureaucrats.

Instead we will use large and sometimes  
giant committees of our 100,000 Main-Senators to  
make all the management decisions of government.

And isn't democracy based on a presumption  
that elections provide us with the best leadership?  
How come our current democracy isn't managed  
through and through by elected officials? How come  
we only have a thin coating of 536 elected officials spray-  
painted on the surface of an immense appointee bureaucracy  
or bro-cracy?

In the written part of my message, there is a  
thousand-page book on how to make democracy  
incorruptible and smart. There is also a 130-page  
constitution for a new form of democracy that is  
VASTLY less corruptible than the current form of  
democracy used around the world today.

And even though the new democracy will  
surely not be perfect, it has a REASONABLY easy  
amendment process. This is in sharp contrast to the  
current constitution. Apparently ITS authors didn't  
want their orthodoxy easily changed once they got  
things the way they wanted.

### E23 — Plank cartoon

The new constitution ALSO has a detailed system for  
the people to muster-up and hold elections without  
the approval of those already in power.

And while we in the land of the free might not  
really need this... we really should consider the  
example we will set for the rest of the world. We  
should show the rest of the world how easy it is for  
THE PEOPLE to institute a new democracy when a  
majority decides to do so.

Rules 181 and 182 of the new constitution  
explain the process where people meet with 250 to  
500 people from their neighborhood.

Then each such group elects one person as  
their temporary mustering sub-senator... to represent  
that a certain number of people have mustered under  
the new constitution.

Once the national quorum point has been  
reached, and a majority of the recently active  
electorate mustered, these mustering sub-senators  
will come to power as a temporary 10-day  
government, completely replacing the old national  
elected government in every way.

During the first couple days of this 10-day  
period, the people will form themselves into 250-voter  
groups and elect regular Sub-Senators. Then a few  
days later, these Sub-Senators will elect Main-  
Senators. And then a few days later, these Main-  
Senators will in turn will elect Over-Senators, thus  
fully propagating the new democracy.

### E24 — rep ratio graph

In all elections, face-to-face, in-person contact  
either as a neighbor, or a Senate colleague  
will unavoidably be the deciding factor.  
This is a democracy where the media  
and campaign spending will have practically no value  
in comparison.

Besides, with 100,000 Main-Senate elections  
each year, how will any group figure out where all the  
candidates stand, let alone influence so many  
elections?

So, this is a democracy designed to work  
without money or media coverage, and the corruption  
these things ALWAYS bring to the process of electing  
leaders.

**E25**

**US Constitution, Section 7**

"the names of the person voting for and against the bill shall be entered on the journal of each house respectively"

**US Constitution, Article 1, Section 5**

"the yeas and nays of the members of either house on any question shall, at the desire of one-fifth of those present, be entered on the journal."

<don't read>

And because our legislative voting will be done in secret,  
it will be impossible for corrupters to tell  
if their bribes, threats, and blackmail actually worked  
on any particular lawmaker.  
What a huge impediment this will be  
to those corrupting our democracy.

And this is in sharp contrast to the current US constitution,  
which says TWICE  
that the vote of each congressman is to be recorded.

Apparently the true authors of the US constitution  
didn't want this vitally important pro-corruption feature omitted... so they said it twice.

And one more thing.  
It costs nothing to have secret legislative voting ...  
Nothing at all.  
And secret voting is not really time consuming either.  
So why not do it to reduce corruption?

**E26 — Here's how your senators voted**

Also, as a point of contrast...  
under the 1st US constitution,  
the Articles of Confederation,  
there was no recording  
of how our nation's 2,000 lawmakers voted as individuals.

But today,  
we record the votes of our one-in-a-million lawmakers  
as they cast their highly sellable... billion-dollar... mega-votes.  
That takes place in the open,  
like we don't care at all about vote selling.

Meanwhile when the people go to the polls  
and cast their nearly worthless micro-votes,  
that takes place in total secrecy.  
Then election secrecy  
serves as an excuse  
for countless boxes of anonymous ballot cards,  
and the corruption that THEY introduce.

But which problem is bigger  
ballot box tampering or vote selling?  
Clearly, an act of ballot box tampering  
is potentially thousands of times more powerful  
than an act of vote selling.

So aren't we doing voting secrecy backwards

on both counts in our democracy?

And do you think this is just a dumb accident?  
Or do you think that our current US constitution  
was written to be as corruptible as possible,  
while looking fair and reasonable?

**E27 King Rockefeller**

When we say WE THE PEOPLE,  
and when we call ourselves a Democracy  
of the people, by the people and for the people,  
we're obviously referring to the real flesh and blood  
human citizens of our nation.

And we are not referring to their  
corporations,  
or their religions are we?  
We the people come first,  
and our fictional citizens and notional entities come  
second,  
and a distant second at that too.

And certainly we should not be ruled by our fictional  
citizens  
as happened with Rockefeller's Standard Oil...  
which today still exists as Exxon and Chevron and  
OPEC.

And we should never allow the immense  
cash streams of our fictional citizens  
to be used as a back-door for corrupting our  
democracy  
and leading it away from the will of the people.

You know today, our one-share, one-vote, for-profit  
fictional citizens like Exxon are not only openly corrupt  
in themselves,  
but they are also a back door to corrupting our  
democracy.

After all, they sell voting rights by the share on stock  
exchanges. Then these purchased voting rights can  
be used to elect managers.  
Then these managers are allowed to divert the  
massive cash streams of our fictional citizens to  
political causes and corrupt our democracy.

Thus the immense cash streams of our **fictional**  
citizens  
can be used to drown out the voice of our **flesh and**  
**blood** citizens as they try to participate in their  
democracy... A state of affairs that is totally corrupt.

In the new democracy,  
fictional citizens do not have the absolute right of free  
speech, like real flesh and blood citizens.  
Instead, there is TOTAL prohibition  
on fictional citizens lobbying government...  
as well as advertising  
and sponsoring political and social causes in the  
media.

And if our fictional citizens do pollute our democratic environment with their propaganda, they will have to pay huge fines similar to what our oil companies have recently had pay when they pollute our physical environment.

Now if a shareholder or parishioner of any fictional citizen wishes to address government on behalf of an entity, they will be free to do so. It's just the non-democratic entity that will be excluded.

These people are free to approach their Sub-Senator, like the other 249 people he represents. And if the Sub-Senator thinks their comments are valuable, he can post them to his Sub-Senate BBS page.

And one big advantage of having too many Senators is that fresh ideas will be inherently more scarce than Senator time. So all our Senators, even our Main-Senators will always be looking for fresh ideas to elevate and ideas that will help them rise in Senate status... even the tiniest and most incremental ideas.

Thus the new democracy is designed to hear the voice of the people, and at the same time, this democracy will NOT really hear the voice of the nation's fictional citizens. Thus we will finally have a democracy that actually IS of the people, by the people, and for the people.

## Part F: Arab desperation

### F5 Arab desert photo

How can there be 100 million Arabs living in a land of no resources if oil only became valuable 45 years ago? How did millions of Arabs eat before the 1973 oil embargo? If they have nothing, how did they get something for nothing?

### F6

#### Egyptian sphinx photo

You know, this parasitic feeding on the outside world is an absolutely ancient thing for the land of no resources. It has been the basis of the Mideast economy and its culture for at least 5,800 years.

In fact, the parasitic feeding of the Sphinx trade is what generated the surplus that paid to build the Sphinx monument some 5,000 years ago, along with the Great Pyramids about 500 years afterwards.

### F7 Sphinx on map far

The great pyramids are by far the largest and most expensive monuments of antiquity, and they mark the exact place where the overland journey between the Red Sea and Nile was easiest — around 120km.

Look at Cairo at the center of the box. Here is where the Sphinx monument and pyramids are located. Look at how Cairo, is located right where it is easiest to get to the blood Red Sea.

Here's where the overland journey is shortest and easiest for the international boat trade. Here the trade between Europe, Asia and east Africa traveled the most by high-capacity boat, and the least by low-capacity pack camels that had to be loaded and unloaded nightly.

### F10 Sphinx on map close

Nobody wants to use camels when they can use a boat. Even in ancient times, boats held at least 20-times more cargo... and boats don't need to be unloaded every night, and they also don't need to be fed in the desert.

So the flow of goods between Asia and Europe naturally went via the Egyptian sphinx, because it was the easiest way to move goods.

The Egyptian Sphinx is the strip of land between the Nile and the blood Red Sea. On one side of this land, boats would arrive from Europe, and on the other side, boats would arrive from Asia and Africa. Until the Suez Canal, the boats always had to be unloaded and put on camels.

As long as the Arabs kept the outsiders and their goods from getting through this land, or going around it, they could frequently sell the goods from each side for many times what they cost on the other side.

### F11 Bab-al-Mandeb from time magazine

In later times the blood Red Sea was made entirely off limits to outsiders. Under this scheme, the thickness of the sphinx was increased to make it more impermeable.

The Asian traders would come and sell their goods near the Bab-al-Mandeb, the so-called gate of tears at the south end of the pirate infested Blood Red Sea. Their trade was frequently welcomed on at the south coast of Arabia, but they were generally not welcome to pass through the gate of tears and enter the blood Red Sea itself.

And on the European side, traders would come and sell their goods near the monument of the fearsome Sphinx demon... at the north end of the Blood Red Sea. They were generally welcome to go to Cairo which meant opportunity in ancient Greek, but not to go any further.

And this protected, or walled area is what is meant by an Arab paradise. It's a commercial... or more accurately a monopoly sort of paradise with high

walls, or high barriers to entry for competitors. Its a business where outsiders could not come in and compete... This is the real Arab paradise.

And the basis of an Arab paradise is fundamentally the ability to extract fat profits from the international trade of the outside world.

And these walled paradise have been feeding this land of no resources since there were people in this place. For why settle in this worthless desert if not to profit from trade?

And these walled paradises are not just trade crossing the Middle East. They can also exist in virtual form, and in other parts of the world.

They can exist anywhere that the Arabs can figure out a way to get between other people's trade and choke it off so as to increase the value of the goods on the other side of the transaction.

That is what a sphinx is... it is a trade sphincter, a way to choke off outie trade and raise insider or mafia profit.

### **F12 Enslaved Jews in Egypt**

Until the time of Moses, the Egyptian sphinx was shared by two races. One made its living from farming the Nile, and the other less populous race made its living from the Sphinx trade.

And judging from the legend of Ex•hodos, the traders came to be either enslaved, or more likely just heavily taxed by the farmers. So the traders wanted to leave or secede, but the farmers wouldn't let them because they brought in so much tax money.

### **F13 Egyptian whipping man**

And the traders would have been much richer than the farmers. So the traders were probably enslaved by high taxes. And it was their tax money that paid for the labor that built the Pyramids and other Egyptian monuments.

### **F14 Ten commandments pic**

Now around the time of Moses, there were a number of plagues afflicting the Nile farming race, ten plagues in fact. And except for the last plague, all seem quite harmless. Its hard to imagine that they affected much of anything.

Funny how nine harmless plagues are explained in such detail in Exhodos... as if they were the real reason why the Pharaoh let the highly profitable traders move away from Egypt.

Obviously it was the last plague, the plague affecting the first born of Egypt that really worked. Obviously this was the real reason why the Pharaoh let the traders leave.

And just to be clear, this plague did not afflict the first born, but the best born, the leaders of the Nile farming race.

In Exhodos 12 we read about how the traders were supposed to eat well roasted meat and

unleavened bread. And those doing this would be protected, unlike the Egyptians.

So it seems then that the luxury products of beef and leavened bread were poisoned. And this is how the traders perpetrated a plague afflicting the first born, or best born, the leaders of the Nile farming race.

And we know that the Arabs DO commonly go after the best born of their host societies. So that's what this 10-plagues legend is about. The other 9-plagues are just extraneous information to distract from the shocking way the Arabs got the Egyptians to let them leave.

### **F15 Ten on tablets**

Now Moses first delivered 10 plagues upon the Egyptians, plagues that were the only reason the Egyptians allowed their highly profitable trading class move away.

But after this Moses also delivered 10 commandments to the traders. You know: Don't kill, don't steal, don't lie, don't have sex with your neighbors, Respect your neighbors property, honor your parents, don't worship other gods, don't make idols, don't misuse your god's name, and use a 7-day week. Except for the last one, aren't these just all totally common sense?

Today we hear over and over about the rather common-sense 10 commandments, not the 10 acts of germ warfare that were the main reason the Egyptians allow the traders to leave.

Thus it seems that the 10 commandments were added later to draw attention away from the problematic 10 plagues story and the idea that the Arabs frequently use germ warfare to get their way from their host societies.

### **F17 Map of route between Cairo and Jerusalem**

No lets move on to Moses parting the Red Sea. In case you don't realize, it is pretty much a straight shot over LAND from Cairo to Jerusalem. After all, the Mediterranean and Red sea didn't connect until the Suez Canal was built in 1869, and this non-connection was the entire basis of the Egyptian Sphinx.

So until 1869, people could just walk the 280-miles over land. There was simply no need to part the waters of the Red Sea to walk from Cairo to Jerusalem.

### **F19 Moses parting red sea 1**

Strange how even today, there is so much media showing Moses parting the blood Red Sea and walking across on the dry sea floor. And if we look at Exhodos 14 and 15, we see dry land mentioned 5 times, and walls of water mentioned 3 times, and most of all we see an incredible TWENTY-FIVE mentions of the Pharaoh's military being killed by the collapsing waters after Moses had crossed the Red

Sea.

In all, the King James Bible mentions THIRTY-ONE things that describe Moses parting the waters of the Red Sea so his people could walk across the sea floor.

### F20 Moses parting red sea 2

You know, saying something 31 times is not the way of people telling the truth. But it IS the hallmark of propagandists and liars. This especially when it's at the start of a book, in the most read part, as this legend is... on page 31 of the bible, in the 2nd of 66 books.

So again, it looks like the old testament is being used to distort another troublesome legend about the desperate land of no resources.

And clearly legends of Moses parting the Red Sea with terrorism would have been a big problem for the Arabs. So they apparently came up with a different version of the same story, a particularly ridiculous version that took the parting of the Red Sea literally.

### F21 Map image, Red side of Red sea and old route/ new route

Now the genius of Moses was 2-fold.  
On one hand he parted the blood Red Sea  
by terrorizing the Egyptian side.  
This forced the Sphinx trade  
to hug the shore on the Arabian side  
of the blood Red Sea.  
Thus he moved the sphinx  
from Cairo to Jerusalem  
and freed his people  
from the slavery of Egyptian taxation.

Now the second thing Moses did was move his people away from all local sources of food. And this a big a HUGE thing. Its big because it made the parasitism of his people into a life or death matter.

And it is big because his people were now totally unified under the parasite's agenda. Thus they became a race united under the one god, the one "undying" group spirit of parasitism, or getting something for nothing from the outside world.

Thus we see the monotheistic god of Moses for what it actually was... the parasitic Arab ex•pull, the evil expull of the Arabs.

### F22 Moses parting red sea 3

So it seems that the great prophet Moses was actually a terrorist and a terrorist mastermind, like Osama Bin Laden.  
He was a pirate that used shocking acts of terrorism to part the blood Red Sea and drive the business to the east side, the Arabian side.

And I want to be clear here. I am talking about Moses who supposedly spoke with god in the form of a burning bush... Moses the receiver of the ten commandments ... and "Moses the Teacher"

who supposedly wrote or received the first 5 books of the bible

And this man Moses not only terrorized the blood Red Sea, he also practiced germ warfare and targeted genocide, or rather acmecide, killing the best born of Egypt with intentionally introduced plagues.

So here's a question for all the people in the Judaeo Christian Islamic tradition...  
all the people whose religions revere Moses:  
Is your religion a thing of the good god of the host?  
Or is it a thing of the evil ex•pull  
of the parasitic land of no resources?

Maybe it is all a giant ancient trick to get you to pay taxes to a church. Then the church turns around and leaks all the money back to the Mideast.

I mean, once an ideology has followers, and is collecting money, the Arabs might as well leave it in place and do what they easily can to sustain it. Thus some of their ideologies must last for thousands of years.

### F23 Adam and Eve art

New subject. In order for an Arab trade paradise to work, pretty-much all the Arabs have to stay loyal to their group cause. The Arab sphinxes will simply not work if too many people take a bite of the sphinx trade for themselves.

When people start taking a bite, the price differentials collapse and the Mideast grows poorer and less able to feed its always bloated populations. Then people starve to death. They die, they die of hunger. And this fear is always driving the Mideast.

So the trade passing through the Mideast is the national trade of everyone, and it feeds everyone. And this is the real forbidden fruit in the legend of Adam and Eve.

### F24 Map of route out of Mideast

So the legend of Adam and Eve is actually about how when Arab people all start taking a bite of the sphinx trade, it tends to get out of hand.

Then lots of really hungry and desperate people will have to walk out of Arabia, through the desert land of no resources and through Turkey, and the Balkans, the balking lands.

And they'll have to do this during a famine, when everyone is quite hungry. The best these Eves and Adams can hope for is to grow gaunt, running the dangerous gauntlet out of the Mideast during one of its periodic trade or matrix related famines.

So the forbidden fruit is not sex, but cheating on the sphinx trade that feeds the relative paradise of the Mideast when the sphinx trade is working.

And there have always been selfish snakes or sneaks in the desperate land of no resources. And these have always been saying, "let's take a small bite"... nobody will notice.

## F25 Unity & Darkness

The ancient legend of Adam and Eve clearly speaks about how the Mideast struggles to be totally unified in its parasitic feeding on the outside world. When exactly did that total unity stop? And when did they ever stop trying to hide their true nature?

## F29 God/devil images

And if you follow a religion with Adam and Eve as its creation myth... is your religion a thing of the good god of the host, or is it more of a religion of the evil de-ex•pull of the Mideast parasite race?

And again, if Moses was one of the original Arab terrorists, then what about religions that exalt him as a prophet? If you follow such a religion, then aren't you worshipping the evil ex•pull of the parasitic land of no resources?

## F30 It's based on a parasite's religion

The idea that everyone should work together to maximize the extraction of money from the outside world... that's clearly at the core of what the Mid-east is all about. In fact, you really have to understand THAT before you can properly understand all the rest about how the Mideast works.

So we might expect Adam and Eve to be on page 1 of the parasite's religious book, because the tale is so fundamental to understanding the parasitic feeding process. On the other hand, this tale doesn't really relate to ANYTHING in the host society.

So here we come to see the bible as this collection of secret Arab monotheistic parables that got out and lost their secrecy.

Also here it seems that Christianity didn't first spread as an ideology to adopt, but as a bunch of Arab secrets that got out.

And all together it may have been called the core•eastern message, or the cori•easti'un message, or the core-in•thean message.

But the message explaining the world's dirtiest secret... that got out around the time of 31BC, After the battle of Ak•tium.... when Rome DISCOVERED the Red Sea. And this discovery was an absolute and total catastrophe for the land of no resources.

And the original core eastern message was something of complete and total goodness for the Europeans.

And **that** spirit of total goodness remain firmly affixed to Christianity.

The Arabs could do nothing about that spirit... even though they diluted the original message by over a hundred fold and completely changed its meaning

And the Christian books contain many valuable nuggets

about how the Mideast actually works, and a whole lot of dross about other stuff. So it does seem that the original message was highly diluted, so as to hide it, and turn it into something else. And thus a message that was deadly to the Mideast was hidden.

## F31 Christians to lions art

Now if the secrets of Arab parasitism are the basis of Christianity, it is easy to understand why the early Christians were persecuted. It was the Arabs behind this... struggling to get the original core east message out of circulation.

And the Arabs couldn't be seen as behind this persecution, so they used the Romans to do it. Thus history records how it was the Romans who were crucifying people for spreading the core eastern message.

## F32 stone Jesus on cross

And the figure of Jesus, the man on the cross. He's like Helen of Hellenic Greece and Peris of Persia... He is one man representing an entire movement that the Arabs wanted to get rid of. In this case... it was the movement that was trying to keep the original core-eastern message alive.

He represents all the countless brave people of total goodness that were crucified for trying to spread the message that explained the world's dirtiest secret.

Now, the Romans didn't handcuff their prisoners. They tied their wrists to flat side of a small log split down the middle, a notched piece of wood called a transtrum.

And this was a piece of wood too heavy to be used as a weapon as we saw in the original Ben-Hur film. But this was the true CROSS-BEAM that Roman prisoners had to bear on the way to their own crucifixion.

## F33 Roman nails

Once the prisoners reached the crucifixion grounds, they were tipped over onto their back. With the victim's hands already tied firmly to the transtrum, it was easy to nail their hands in place.

Now of course most people would simply go into a frenzy once they realize that they were about to be crucified. And this is where the word tantrum comes from. The tantrum was the totally emotional, but totally ineffective outburst that people would have when they realized they were being nailed to the transtrum.

### F34 F41

#### Draw this with L. crus = leg

The crucifixion transtrum had a hole in the middle called a MORTICE and this was basically the killing hole, or the morter or murder hole. And it was probably like a typical mortice today. Just a rectangular hole chiseled through the transtrum.

Once a person was nailed to a transtrum, this was placed on a post called a CRUS in Latin... CRUS being the Latin word for leg or post. And the CRUS or curse posts normally had an elongated ten-on, or extend-big, pointing upward.

This extended through the transtrum, and it is the reason why the Christian cross is shaped like a lower case T Instead of an uppercase T... For why waste the material otherwise?

And it is important to realize that the public fear caused by the spectacle of crucifixion was almost as important to the Arabs as getting rid of the people who were spreading the core eastern message. So first these people were marched through town as a spectacle and as an example for the whole town then they were crucified just outside the town on the main road.

#### F35 stone Jesus on cross

Now history records that Roman crucifixions normally took place on the main road at the edge of town, in one place. So birds and rodents must have hung around in this place and they must have grown accustomed to eating in this way.

Some scavengers probably got started the moment the executioners walked off. And scavenging birds instinctively peck out the eyes first. Then they start tearing the flesh from the places they can reach from their perch. On a crucifix, this was the face, head and hands of the crucifixion victim ... because these sensitive parts of the body are the places the birds can reach easily when they perch.

The crown of thorns was more of a helmet of thorns. It kept the birds from starting on the victim's scalp and pecking into the brain and killing him too fast.

#### F36 Jesus on cross

Huge numbers of brave people, the true apostles of the original core-east message died horribly on the cross to keep the message alive.

The Romans would kill them and then many more would come to life to replace them. Did you know the word resurrection comes from the Latin word resurgere, to rise again like the waves, or to swell with great force.

The truly amazing resurrection wasn't about one man coming back from the dead. This is the cover story. The amazing resurrection was how they

crucifies thousands of people for talking about the world's dirtiest secret and then thousands more would rise up to replace them.

That was the real resurrection of the original core eastern message. That is what the symbol of the man on the cross really means. It is the symbol of the countless people who died to keep the truth alive about the world's dirtiest secret in the face of the hellish deaths that the Arabs were inflicting on them.

Thus the true second coming  
is not of the messenger,  
but of the message.  
It is the resurrection of the outside world's  
understanding  
about the worlds' dirtiest secret.

The messengers  
are all pretty much impersonations...  
mythical historical figures  
that were created to cover-up  
and hide a message, or a movement,  
or a political or cultural system  
that the Arabs needed to get rid of.

### F37

#### A pamphlet diluted into an encyclopedia

Soon after the original core eastern message came out, the Arabs released a great mass of other material. They said that this was part of the original message, but it had been omitted, so the main message would be easier to copy and would spread faster.

Later, over some generations much more content was added. And many of these parts and versions were not really accepted at first. But the Arabs talked them all up so they would have some claim as a legitimate part of the core eastern message.

Then about 350-years after the secret got out, the Arabs had their new church take pretty much ALL of the writing and put it all together as their new bible. And this is how the Arabs turned a pamphlet into the encyclopedia bible we have today.

Ultimately, an easy to understand message of MAYBE 20-pages was turned it into a million-word bible of about 2,300 standard pages.

So the bible is maybe 1% modified and degraded original tale and 99% Arab adulteration. And this is how the Arabs got the world to forget about the world's dirtiest secret the last time it got out.

#### F38 The Bible is a non-book

In 409AD, the Arabs got the Catholic Church to begin rounding up all non-Christian books, and also killing people that were found with non-Christian books.

So from this standpoint, the bible looks like a non-book... it looks like the illusion of a book

that the Arabs left in exchange  
For the books they took,  
so the theft wouldn't be so easy to notice

Now here I want to point out some things about the bible:

- 1) It has no information of practical use.
- 2) It is hard to understand.
- 3) The words are archaic.
- 4) The sentences are long and awkward.
- 5) It is often contradictory.
- 6) It is mostly subject to interpretation.
- 7) Interpretations occur through an opaque process.
- 8) Interpreters are chosen by an opaque process.
- 9) There is no system to the book's organization and the subjects are jumbled.
- 10) Is not indexed, but only divided
- 11) The divisions have long alien names
- 12) And finally, the division names give no hint of the content within.

#### **F39 The Koran is a non-book too**

And the Koran is also a non-book.  
It suffers from the same problems as the bible  
AND it also is  
19) in hard to understand verse and  
20) Its sung to its believers

#### **F40**

**BIBLE**

**IMBIBE**

**BRIBE**

**BIBLIOTECH**

The word IMBIBE speaks of the drinking involved when ancient people first absorbed the stories of the BIBLE. It was rather like the drugs that hit America right before the Arab Oil Embargo. And these drinks seem to have been a BRIBE, so people were apparently bribed in a number of ways to sit down and listen to the new bribe.

\_\_\_\_\_ The Arabs spent much effort and money getting their new bible adopted, a bible that would eventually totally replace the troublesome old core eastern message and become the new core eastern message, the new testament as far as anyone was concerned

#### **F45**

**Jesus = G·sus**

**Jesus Christ = G·sus Core East**

In the particle language of the Harem brothers, call it bur·peh, or bro·lingo, they use particles like AK which means up or top and UK which means down or bottom. And SUS which means yours, and G which means grand, giant, or great.

And the harem brothers frequently use this language to name their creations for their matrix role. This is so the bros don't get confused about which direction they should pull in.

Also, it should be pointed out that everything with a matrix name is not real, but a creation of the Arabs.

So G sus actually means big·yours, just like G·viz means big·picture. So the name Jesus Christ means your-big core·east.

And this is connected to how the Vatican is the 2nd holiest site under Islam.

And its also connected to how the Vatican has a sistine, or sustain chapel... a chapel that must be sustained at all costs. And that is why the Sistine chapel has this greatest **artistic** treasure to mankind painted on its ceiling.

So once the Arabs turned the core eastern message into the Christian message, they had to explain where it came from. So they invented someone, an impersonization named your·big·core·east, and that's where the message came from.

#### **F46 Pantheon**

You know, Roman religion was polytheistic and quite inclusive. They had many gods and they were constantly admitting new ones. In fact, they even built a great pantheon shown here, a temple for all the gods. So why crucify the harmless Christians?

By far the most reasonable explanation for the Romans crucifying Christians and feeding Christians to lions is that it wasn't actually the Romans behind this, but their corrupt government.

And who was corrupting Rome's government, but the people who most wanted to do away with the core eastern message, the world's dirtiest secret?

#### **F47 Catholic Confessional**

With the new adulterated message, the Arab dirty secret was turned into a new religion. This had mandatory tax payments, mandatory church services, and mandatory confessions. And it also had a worldwide command structure that at times had life or death power over both believers and non-believers alike.

Once the Arabs got their new and 99% adulterated version of the core-eastern message the way they wanted, they hijacked the original spirit of the message and diverted into their new religion. Then they struggled to make all the other versions, the older and truer versions into heresy.

#### **F48**

**Emperor Theodosius II, 395AD**

"Those people who are found to deviate, even in a minor point of doctrine, from the orthodoxy of the Catholic Church shall be called heretics and shall be subject to the punishments which we have decreed against them."

[By 395 we see Emperor Theodosius the second

saying <read quote>

And make no mistake about it. We read over and again that this Catholic punishment was either torture, death, or both.

Our word bishop comes from the Greek word epi•scope meaning overseer. And about 265 Catholic bishops or overseers attended Council of Nicaea in 325AD.

Here in present day Turkey, not far from Istanbul, is where the Catholic Church first established the current form of the bible as official orthodoxy. And funny thing, only 6 of the 265 overseers attending were from west of Greece.

In other words only 2% of the bishops who initially established Catholic orthodoxy and accepted the current form of the bible came from Europe. The rest were all from the then Greek-speaking Mideast, except for a few that were from Greece itself.]

#### F49

Then by 409 The Catholic Church was rounding up, or cleaning-up all the books saying. "[Anyone... found in possession of any noxious \[pre-Christian\] books and writings, or having hidden away any \[pre-Christian\] books under any pretext, or having failed to deliver them \[for burning\] regardless of the circumstances, is hereby notified that he shall suffer capital punishment if found guilty of the crime of maleficium](#)"

[The great Arab book round-up first started as a way to purge the world of the world's dirtiest secret, and then it became this total purge of all the books they could find. And in the end Europe entered this thousand-year period of darkness where human progress was halted for just about a thousand years.

And all of this, the ending of Rome and the great age of darkness was first and foremost **to make** the world's dirtiest secret a secret again. So everyone should just remember, the Arabs destroyed the world once before for to make their dirty secret a secret again. And they may do so again.

And this is why I am worried about nuclear war and pan-epidemic now. If either thing happens now, nobody should have any doubt who it was behind it. It was the Arabs, especially the ones with many half-brothers by many different women. Men with identical Y-chromosomes and dissimilar X-chromosomes.

Also we should bear in mind that according to the inverted logic of parasites, our best friends in the Mideast are actually our core enemies. Likewise a nation calling itself IS REAL actually ISN'T REAL and it is just part of the matrix illusion of the Arabs.

#### F50 Roman built ruins in Syria

The last time the world's dirtiest secret got out... it ended Rome and brought about the Dark Ages. Don't let this happen again. Deal with the root cause of this

problem and deal with it quickly. Quickly move all the people.

If you are going to really end Ishtar and Islam once and for all, you have to move all the people to places where they can actually make an honest living for themselves.

And I will tell you again. We must move them quickly, because in half a generation, the outies will start forgetting, while the innies will grow more and more aggressive and weaponized. We must not go down this road again. You must move them all quickly.

#### F52 Roman built ruins in Syria

New subject. in Roman times, about 2,600 year after the pyramids, and about 1,900 years ago... Rome was paying to build many big projects in the Mideast, projects like this one in Syria.

#### F53 Arabs in arms

Little know today is that Rome had troops stationed in the Mideast for about 450-years. Ostensibly this was to protect the people living there.

And in Roman times as today, these troops, and these construction projects stimulated the Mideast economy. Strange how the outside world always finds itself giving things to feed the land of no resources in one way or another.

#### F54 Roman built ruins in Syria

And you know what is even stranger? Its that the Mideast just loves to be occupied because of the economic stimulus it brings to their economy.

So if we give them any chance at all, they will happily provoke us into crusading against them and occupying their land ... say with some sort of September 11 attacks.

And do you know what's strangest of all about the Arabs getting us to occupy their land? It is that they will pretend to hate this occupation when in fact they just love the economic stimulus and will struggle to keep it going as long as possible.

#### F55 Ammianus Marcellinus

According to the ancient historian Ami•an March•all•in, Rome was still garrisoning troops in the Mideast when the city of Rome fell. This is something that we really must take note of.

#### F56 Line of European refugees

In section 31.3, Mr. March•all•in also talks about how the Romans kindly allowed a vast hoard of starving Barbarian refugees to enter the Roman version of the EU without any provision for feeding them. Then with nothing to eat, this hoard of starving Barbarians turned to plundering and taking what they needed.

#### F57 Refugee boat

Eventually the refugees overran Italy including the city of Rome thus ending the Western half of the Roman Empire. This was the first of two steps in precipitating the European Dark Ages, and a 99.5% collapse in European populations.

Europe really should take note here... because the same eternal enemy is using similar tactics today... simply because... it worked before.

**F58 Bible, Leviticus 18:25**  
"The land itself vomits out her inhabitants"

**F60 The Day of the Barbarians,  
by Alejandro Barbero, 2007**

Here's an Arab heuristic guidebook on the ancient history of the European refugee crisis. And note the timing and matrix name of this book and its author. Apparently after many centuries they think the day of the barbarians has finally just about come again.

**F61 Barbarian = Arrabbiān**

You know, if you double the R and the B in Arabian you have perfect anagram of Barbarian.

And there was this endless stream of new Barbarian groups that migrated to Europe. And these did come from the East of Rome, nobody argues with this. The only thing we should clarify is whether they came from the northeast or southeast, via Constantinople, via today's Istanbul.

And also, in Roman history, we constantly read about fresh new barbarian groups ... groups with many different names, but maybe this is all just a ruse, to cover up how there has always been just one source of barbarians or Arabbians in the world...the harems of the Mideast.

So it seems that it was actually the Arabians, and not the Barbarians that overran Rome. Why did Rome fall? It was invaded by Arabians... not Barbarians.

**F62 rabble, rebel, repel, rival, arrival, revile, barb, rape, army, ravage, ravenous, harpoon, harbinger, harm, horrible, rubella, rabies, rabid, rapid, rapier, robot, rob, and repudiate**

The written part of my message has a list of 500 negative words that come from the word Arab in English, Spanish, Italian, French, and German mostly.

Here are some examples. And if we take all these 500 words together, we get a crystal clear picture of the totally inverted agenda and struggle of the parasitic land of no resources — a struggle that is the exact opposite of anything we in the host part of the world would ever want for our lives.

And if you meet someone with many different aliases, it is pretty safe to start out with the assumption that he is a totally evil professional crook.

So here we understand that terms like PLO, Hamas, Al Queda, Isis, IS and the Taliban are just the latest in an endless string of aliases for an ancient

crime family, a harem bred crime family from a land of absolutely no resources.

**F63 Line of European refugees**

Is this really a line of refugees? And if it is actually a line of refugees, where are the women and children? And how can men in desperate need of refuge afford to leave their women and children behind? Here once again we see an Arab matrix lie for what it is.

**F64 Arab chaos scene**

New subject. You know, most people conceive of the Arabs as disunited individuals or disunited families... rather like our people. But the truth is the exact opposite.

**F65 Yavno praying to Mecca**

They are all from a totally desperate land of no resources, and the way they can survive best is by working together and organizing their crimes and parasitic feeding. And this they have been doing for thousands of years... under an ancient system for cooperating to feed their land of no resources.

In truth, the Arabs are totally cohesive and unified in their agenda and activities or ak•ti•we•itis.

Just consider how they pray 5 times a day facing the same direction, like they're all slaves to the instructions of central command in Mecca, Saudi Arabia.

**F70 S•audi = no•hear**

In fact, they are all slaves of central command in Saudi Arabia, the S•audi part... the part you are not supposed to hear about. They just pretend not to appear organized, so they can get away with more, much more in fact.

**F71 WTC Towers on fire**

I mean the Arabs wouldn't dare have tried the September 11 attacks if everyone perceived them as slaves to the totally desperate and unified cause of their people. Could there be any Arab terrorism at all... if the world realized that the Arabs are vastly more organized than we are in the part that is supposedly free?

**F72 Yavno praying to Mecca**

If we realized that the Arabs are vastly more organized and unified than we are in the free world... if we realized that there actually was a single nation of Islam, as so many Muslims repeatedly and emphatically claim...

If we just opened our eyes and saw them all praying to central command like slaves... five times a day... would we allow their central command to have 1/3 of the seats in the UN?

You know the UN constitution says that all IMPORTANT MATTERS require a 2/3 overmajority to pass the general assembly. And the definition of an

IMPORTANT MATTER is a pretty low bar at the UN. So basically anything we would ever read about in a newspaper requires a 2/3 vote at the UN.

Therefore, Arabia's empire with 20% of the world's people can effectively block the other 80% of the world from taking action at the UN.

Do we really want to give this power to Arabia's obedient slave empire? Do we really want Arabia's slave empire, with its diametrically opposed parasite's agenda to have a veto right over anything the UN considers?

Clearly the UN has been designed to maximize Arab power while seeming reasonable and fair. Clearly all the power at the UN... like with all bicameral legislatures lies with the primary house, the General Assembly where Arabia's empire uniquely has a veto.

The secondary house of the UN, the Security Council is just a second **veto**, a shared **veto** that's subsequent to and lower than Arabia's **veto**.

So clearly the UN has been designed to maximize Arabia's power, while minimizing the power of the rest of the world.

### F73 Turkish flag

You know, while Ishtar may sort of run, or at least heavily steer the world, it still must pretend not to be there as a unified force. This is because the moment the host part of the world sees a foreign con•spiracy, it automatically unites and become vastly stronger.

Thus the parasite's evil expull must exist in darkness and secrecy... in the dark light of the silvery moon. And this is what the crescent or cresc•n't moon, the non-growing, or shrinking moon of Islam symbolizes.

It symbolizes the increasing darkness of the parasite's agenda. It symbolizes the HIDEOUS or HIDE•IOUS agenda of the Arab ex•pull, an agenda so evil it must be HIDDEN or at least disguised from nearly everyone, including most of its own people.

Even the Arabs don't talk about Ishtar openly among themselves. And there are no textbooks on the ways Ishtar, except heuristic texts that only make hints.

Everyone INIT is terribly afraid that Ishtar's secret THE WORLD'S DIRTIES SECRET will get out again, like after the battle of Actium or Ak•ti'um in 31 BC...

This event lead to a horrible famine and the near total de-population of Arabia. It also lead to the western Dark Ages some centuries later.

This time we are going to do it differently. This time, the outside world will understand that if it doesn't feed and give hope to the people of the Mideast it weaponizes Ishtar at the dawn of the age of artificial intelligence and killing robots.

This time, everyone gets fed and moved. This time we will have a better world for

EVERYONE... A world without Ishtar and a world united under the agenda of more and better for everyone.

### F75 Robot factory

Come with me. Thanks to computers and robotics, there is no longer any need to foster the desperation that the group spirit of Ishtar feeds on. There is no need for anyone to be a desperate slave any more. There is no need for the suffocating restrictions of Islam. And there is no need for the outside world to hate you.

Thanks to automation, mankind can have plenty to sustain everyone in just 3-years...

Come with me.

We will have a global war economy without the war. And there is no longer any need for Ishtar or Islam, and now it will end...

now Ishtar will die root and branch.

### F76 Lifeless desert with ruins

In the outside world, we underestimate the absolute and total desperation of the land of no resources... a persistent, even eternal desperation that the Mideast leadership struggles to foster and grow... because it is this desperation that drives the critically important exit-promise meccan•isms that feed the Mideast.

And they go to church, 5-times a day, every day. So we also underestimate the regimentation of Mideast life.

And we also underestimate the codification of its society. as well as its strict internal laws, and the hellish punishments that transgressors face...

We have all heard that saying, "Allah the merciful". Well it is actually doublespeak, and there is ANYTHING but mercy for Arabs who seriously go against the interests of the Mideast. Those who seriously go against the interests of the Mideast frequently die by a prolonged hell.

### F77 starving kids

We also don't really understand how the Arabs are all loyal to feeding the dirt-poor, and totally desperate people back home.

And we also don't grasp how they are all in debt to the diametrically opposed parasitic cause of their people for funding and paving the way for their ex•hodos, their trip to the promised land, our land.

And this trip to the promised land... our land. It's both the most important thing that Ishtar sells... and the easiest thing for us to take control of.

### F78 Syrian ruins modern

Everyone in the land of no resources desperately want to migrate out, to do the ex-hodos thing to GET OUT of a land that is awful by design. A land that by design is dangerous and a land that has no work, or water, or greenery or fresh food, or music, or romance, or media, or so many of life's simple joys.

Its a hellish land everyone desperately wants to leave,  
A land where everyone wants to undergo ex•hodos...  
And leave the relative hell of the desert...  
and go to relative heaven in our lands.

It's a land where people sells their soul to leave.  
A land designed to maximize hellishness  
and the value of exit promises and positions in the  
outside world  
A land that all the harem spawn are desperate to leave  
and make room for the new harem spawn...  
constantly coming off the conveyor belt.

### F79 Taxi balaclava

They all desperately want new lives in the outside world.  
But the outside world is expensive for them by design,  
and it was also made to hate them by design.

So most can't manage by themselves,  
and most need Ishtar to get them a place in the outside  
world. And a place is thus a hugely valuable thing  
for Ishtar to sell the countless slaves that its harems  
breed. And thus Ishtar acquires an army of people  
beholding to its evil parasitic ex•pull.

So as strange as it sounds,  
Arabs incorporated actually struggles  
to get us to hate its people to a certain extent.  
It does this because this increases the value of its exit  
promises.

And Ishtar actually has difficulty surviving  
without the ability to sell new lives in exchange for exit  
promises,  
and as a reward for past service to the evil ex•pull,

### F80 DACA pickets

Here we see the DACA immigrants  
And we look at their faces  
which part of the world do these people come from  
mostly?  
And what do they want?  
They want lives, or positions in our land.  
They want us to give them ex•hodos in our land  
And how are they going to obtain that exhodos?  
Isn't it with the involvement of Ishtar's power in  
Washington?  
So won't they will all think that Ishtar had a role in their  
new life,  
and won't they all be forever in debt to **evil** Ishtar for  
this

So now we consider our non-elected  
and **totally** corrupt political parties.  
And we note how one party  
is so BIZARRELY fixated on the rights of illegal immigrants...  
that its willing to shut down the government to assure those

rights.

So here we see how the DACA controversy is not real.  
And no other interpretation makes any sense.  
Because not even the most extreme liberals  
are going to shut down their own government  
to assure the rights of non-voting illegal immigrants...

So when we strip away the immigrants serving as camouflage,  
DACA, or De•ak•A is the Arab Acme  
making sure that they can obtain promises  
from a new generation of harem spawn.

This is so that Ishtar can have a new generation of debtors...  
people that will do the often reprehensible things  
that Ishtar needs in our nation.  
And this is the exact opposite of what we should be doing as a  
nation.

Instead, we ourselves must scrutinize and choose  
who we let into our own nation.  
And we must never allow people to think that Ishtar  
has any ability to corrupt this all important life-changing  
decision,  
or Ishtar will acquire a legion of loyal operatives in our nations.

And if WE move them,  
WE can offer this under any conditions WE chose.  
We can demand that they cleave from their old religion.  
We can scatter them into the countryside,  
and subject them to life-long monitoring.  
And we can make them pay back  
the cost of their re-education and re-location

And by moving ALL the people,  
we do one really huge thing for the world.  
We end the energy force that is driving Ishtar,  
and we unify the world  
under the cause of more and better for everyone.

### Local search: Moving-all-the-people

And you of the Mideast  
This is the very message that the struggle  
of your people is trying to bring about.  
You Arabs must read my special message to you  
before doing anything else

### Part-G: Other Arab hoaxes

#### G2 Flat earth art

The desperate Mideast has told the world many  
matrix lies... many great self-reinforcing lies  
throughout history. In the 1400s, they corrupted our  
institutions... so they'd spread propaganda about the  
world being flat.

This was to keep the Europeans from sailing  
around the Arab spice trade monopoly... the Arab

monopoly on super-expensive spice or spicy-al or special imported goods moving between Asia and Europe.

At the time, this monopoly was the biggest source of income for the Middle east. So obviously, it was the desperate Mideast that was behind the ridiculous science lie about the world being flat.

### G3

**Plato, d. 347BC. Phaedo, 108e**

"the earth is spherical"

>>>

**Aristotle, d. 322BC, Meteorologica**

"The horizon [of the stars] changes with a change in our position [on Earth]. This proves that the earth is... spherical!"

Here we note that the ancient Greeks and Romans DID NOT think that the world was flat. In fact, the written part of my message lists 19 ancient Greek and Roman quotes, like these, that mention a spherical world.

You know, the Romans knew the world was round and they also knew how to get past the Mideast to reach Asia. But after the fall of Rome and a 99.5% collapse in European populations. And after the dark ages where all the books disappeared Europe **forgot** how to reach Asia, Europe forgot how to get past the Mideast to reach Asia. Who do you was responsible for the fall of Rome and the great forgetting? It's obvious who benefitted? And certainly the desperate land of no resources was the main beneficiary of this.

Now, when Christopher Columbus returned... he brought word of land only THIRTY-FIVE days west of Europe. And he proved that there was no risk of sailing off the edge of the earth. Thus he famously proved that the world was not **flat** as the Arab propaganda repeatedly said.

### G4 Egyptian sphinx

After Columbus' 35-day trip, it became obvious that the Portuguese effort to sail around the Arabs had been sabotaged, or at least corrupted.

After all, it took the Portuguese 194 years after the Marco Polo book came out, to get only 2/3 of the way down the west coast of Africa.

So Columbus also made it clear that the Arabs had quietly corrupted the Portuguese government. And the widespread awareness of this Arab influence in Portugal caused a SHARP decline in Arab power and effectiveness throughout Europe.

And this was right at the moment that the idea of legendary forgotten continents and exploration seized the popular imagination of Europe.

I think also, many people realized that if the Arabs were secretly manipulating us into going in one direction... that it was a pretty safe bet that we should be going in the exact opposite direction once we woke up to their secret manipulations.

So after Columbus, it was clear that Europe would soon find out how easy it was to simply sail around the Arabs, and the highly profitable trade sphinx or trade sphincter that fed their race.

And soon the Arabs would have much less to eat.

So history records that starting in 1492, the same year that Columbus re-discovered America, Europe experienced a huge influx of Mideast refugees.

Although history interprets these as Jews from Spain, and not Arabs from the Mideast... as if the cream was substantially different from the milk.

You know it is very HARD to change historical facts, like the huge influx of Mideast people that came after 1492. But it is very EASY to change historical interpretations, like what sort of Mideast people these were ...

Indeed, these altered INTERPRETATIONS are the very fabric of the matrix, the giant self-reinforcing lie of the Arabs.

### G5 Roman ruins in Arab desert

Another great Arab hoax was how the Arabs convinced the ancient Romans in famously FERTILE ITALY no-less that they were dependent on food from the Mideast desert... supposedly from Egypt and Tunisia. This matrix ruled for about 800 years, or most of time that Rome existed as an empire. From the end of the 2nd Punic War until the fall of Constantino-pol in 595.

### G6

#### DK Eyewitness guide to Egypt

"Rome's expansion... was fueled in part by the need for ever-increasing quantities of grain. Grain's importance to the ancient economies is somewhat analogous to the value of oil to modern economies."

Here we read how <Read>

Now clearly its a ridiculous idea that Rome in fertile Italy could become dependent on imported food from the Mideast... Shipped in on ancient freighters no less.

And even more absurd is the way that Rome remained dependent on imported Mideast food for most of 800-years. This was about the same time that Rome existed as an empire, a murderous, expansionist world dominating empire, a police state fronting for the Arabs.

### G7 Roman ruins in Arab desert

Isn't it strange how the world always seems to find

itself dependent on some commodity that only the Arab have?

Can you see a pattern yet? Do you think the Arabs, in their total desperation might have tricked the world again with petroleum?

Can you imagine that they might have spun another great lie or matrix to feed on the outside world? Can you see that our dependance on Mideast oil is just another of many Arab hoaxes?

## G8

### Recent oil shortage years

1973-77

1980-81

1990.

2003-2007

Now of course there wasn't a constant state of famine in Ancient Rome. But there were regular food shortages where the price of grain was increased greatly. It was probably similar to what we've gone-thorough in recent decades with oil... about one shortage in each decade.

The way the scam works is that the harem-bred Arabs infiltrate our society and pose as our people. Then they struggle to raise domestic costs. With oil, they struggled for expensive drill bits, expensive environmental regulations, expensive offshore drill rigs, and that sort of thing.

And at the same time, the Arabs are getting their goods from the parts of the world that they have totally enslaved and impoverished, for example China today. Where wages are only 10% of those in the US. Thus the Arabs can lower their prices to the point where our domestic producers can't really compete. Thus the Arabs come to provide us with a large part of our supply... which is often smuggled and invisible to government.

Then, once they have driven enough of their competition out of the market, they stage a shortage where prices go up 5-to-20-fold for a short time.

Then new producers enter the market and set up new facilities. But it takes time for domestic output to increases to the point where the Arabs are forced to slash prices again. So the Arabs make a pile of money in the meantime.

Then the process repeats over and over again. And this process works with petroleum, grain, money, gold, diamonds, Mexican limes, marijuana, cocaine, or anything other commodity really. And the Arabs have been practicing this sort of market alchemy with many different commodities for thousands of years... so they're experts at it.

## G9 Athens dependent on imported grain

Before Rome, democratic Athens became dependent

on imported grain from Ukraine.

Then in 404BC, the Spartan—Mideast alliance

went for the food, or rather they went Al•cibai•de, which means towards•food•idea in ancient Greek.

This Spartan—Mideast alliance seized the Athenian grain ships near the city of Troy, or Byzantium, or present day Istanbul.

This in turn forced the Athenian democracy to surrender.

Now democratic Athens fell due to an interruption in its food supply And apparently this knowledge was a problem for the Arabs.

I say this because history now records Al-cibai-de as a man, an Athenian leader, and not the tactic by which the Arab/Spartan alliance defeated democratic Athens.

After this the details are a little sketchy.

But within about 70 years, Alexander invaded Greece and massacred pretty much everyone in Greece who did not join his Arab-fronting army of pillage, or pullage.

This Army incidentally, once it had pillaged the known world was lead into the desert and nearly everyone died.

But Alexander, which breaks down as A•lex•an•dar, or no•books•rebirth•give, seems to have rounded up all the Greek books. And there was also a great Mideast library called the library of A•lex•an•dar•i•A. Full of the outsider books that the Arabs had seized

So here we see who was behind Alexander, and that the purpose of his frontman conquest was to profit form pillage and pull.. under But it was especially to round up all the books. Because that is what the conquest was named.

## G10 These aren't the droids

Here we stop to consider the martyr George Orwell's Ministry of Truth, and how it told lies and changed events. Well the Ministry of Truth is actually a real thing. It is an aspect of the Arab tree of knowledge mentioned in the book of Genesis.

And here with Alcibiades, as with the term Barbarian, we see two of the countless words and stories the Arabs have modified over the centuries... two aspects of the matrix.

It sure makes me wonder when mankind will mankind stop lying to itself. What an achievement it will be for mankind when it stops lying to itself. When

it stops making and supporting all these fake news stories, fake ideas, fake word definitions, and fake ideologies.

### G11

<u>Host</u>	<u>Parasite</u>
<u>Good</u>	<u>Evil</u>
truth	lies
light	darkness
knowledge	ignorance
honesty	dishonesty

You know, the world is ruled by two group spirits that are polar opposites. One is the host spirit of more and better for everyone. The other is the parasite's spirit of less and worse for the host so there is more for the parasite.

The host spirit of goodness worships truth and light and knowledge and honesty... and the parasite's spirit of evil worships lies and darkness and ignorance and dishonesty.

And the organized pursuit of the parasite's agenda is the main thing, the most fundamental and cornerstone thing wrong with mankind.

Now that stops, and now the world turns at once and with total unity to stopping the organized crime, and the organized parasitism in every single way that anyone can think of.

### G12 Pie chart 6 vs 63

New subject. The governments of the world owe about 63 trillion dollars collectively. Meanwhile China and Japan hold less than 5 trillion dollars of foreign debt.

Who is holding the other 90% of the world's debt? Perhaps it is mostly the people that have been selling the world around a trillion dollars-worth of oil each year for about 45 years?

Funny how we never hear about all the trillions we surely must owe the Mideast.

Funny how China only holds about \$1-trillion in US government bonds... and this gets all the press... really ALL the press... as if China was the world's main creditor.

How can our media be so dumb as to cast China as our main creditor, when it only holds about 5% of the 20 trillion dollar US national debt? Maybe our media isn't dumb. Maybe its just been corrupted by the Arabs... like our government

Now remember how the sub-prime crisis was super hard to understand? Basically, when the Arabs created the field of subprime finance, they purposely made it hard to understand... so they could trick everyone.

And this is why so many people bought these debt insurance liabilities

that they thought were actually assets. And this is how the Arabs got us to fund their oil bubble, their stealth embargo that popped in 2008 and caused so much trouble for the world economy.

Now the Arabs also created our credit system, which they also made hard to understand. And they made it especially hard to get a big picture of who exactly owns our debt. And it certainly isn't Japan or China. and Europe is in debt just like us. So by process of elimination, who are we in debt to?

So when we're paying our government-encouraged and tax deductible mortgages, who are we actually paying? ... behind all the screens, who are we paying? Certainly it's the Arabs. Mideast incorporated, the Sphinx, whatever you are going to call it.

And who is collecting up to 15% of our tax money in the form of interest on the national debt? Of course it's the Arabs as well.

### G13 Mortgage Rates

So nearly all of the world's debt is from the Arab oil hoax. and it's all mostly criminal proceeds. And thus simply not binding. It's a matrix illusion. It's our oil scam payments lent back to us and converted into long-term debt to feed the land of no resources over the long-term...

### G14 National debt

So when we go to work to pay our mortgages, we are actually working hard for our Arab slave masters. And while we are certainly free as individuals within the matrix, we've still been enslaved as entire societies, enslaved by a matrix, a giant self-reinforcing lie... enslaved into working for the land of no resources, into supporting one fifth of the world that produces nothing at all except cohesive desperation and HATRED of non-believer infidels.

### G15 The routes from China

And you in China. You are even more enslaved than we are in the US. I say this because you are kept POOR and deprived of resources. You are THE most industrial nation in the world today. How come your wages are only a tenth of ours?

Now go to any foreigner in China and ask a very simple question: Do more than half of

your nation's manufactured goods come from China? They will all say yes.

So I ask again... why is your nation is so poor? How come average Chinese wages are only 1/10th those in the US and Europe?

Let me put it another way.  
How come the average Chinese worker must work 20 minutes to buy a liter of Arab oil, while the average American worker only has to work 2 minutes?

And how come when you trade with Europe, the goods don't move by energy efficient train?  
Why do your goods your trade go twice as far by energy INEFFICIENT boats...  
boats that use perhaps 50 times more energy than trains?

And look how your trade with Europe must STILL pass through the blood Red Sea and the gate of tears,  
the Bab al Mandeb as it has for thousands of years.

And look how your trade with Europe must still pass through the Arab sphinx or trade sphincter, where it is subject to Arab profiteering.

#### **G16 Pie chart, 4-below and Alibaba**

Look at how China only makes a tiny sliver of profit from the goods it produces and exports. The rest is OIL to extract the raw materials,  
OIL to refine and produce the raw materials,  
OIL to ship the raw materials to China, and  
OIL to ship the finished products to the rest of the world,

AND of course the Arabs are making most of the money selling you this oil... directly or indirectly, because they've hidden most of **your** oil... just like they have hidden, or mined or minimized most of our oil.

And of course you have to pay ALI-BABA its cut for introducing you to your foreign markets. And its easy to see who owns Ali-baba right?

So ultimately, the Chinese slave nation only makes a sliver of the profit despite doing ALL the work. And Ishtar, otherwise known as SHE in English makes all the money. This name SHE is incidentally pronounced just like your Arab figurehead monarch.

Funny how this guy SHE just recently cleared the way to be China's lifelong emperor... just like those Arab-fronting emperors that lived in the Forbidden City and totally impoverished China for thousands of years... before you all became impoverished communist slaves of the Arabs...that is.

Did you know that when the Arabs grabbed dictatorial power over Rome, they kept the Senate around as a powerless ornament for about 650 years? until the very end of Rome really. So the mere existence of an elected legislature means nothing at all really. Just search at Cassius Dio 53 point 21 in

the written part of my message.

#### **G17 Chinese flag**

Are you the PEOPLE'S republic of China?  
The people's republic of the Chinese people?  
Or are you still secretly a slave colony in Arabia's empire?

Look at China's flag.  
Look at how there is sort of an Islamic crescent moon hidden in it. Strange, isn't it?  
When did the Arabs stop running China like a slave state?

#### **G19 Soviet flag**

Look at the flag of the USSR, the old Soviet Union.  
Look at how there is sort of an Islamic crescent moon hidden in it too. Strange, isn't it? When did the Arabs stop running China and Russia?

#### **G20 Chinese flag**

Are you the PEOPLE'S REPUBLIC of China?  
The people's republic of the Chinese people?  
Or are you still a slave colony in Arabia's empire?  
You know the US is the people's republic of America.  
Just like you are the people's republic of China.  
And like you, we are supposedly a rex publica, a nation where the public, or the people are the king.  
At least that is what it says on the product label...

Come with. I claim to be the panda, the peh-an-da, the say-new-give  
the creature with the sharp distinction between white and black in his coat,  
the sharp distinction between good and evil in his writings.  
Come with me and abandon the peacock, with his many eyes,  
the symbol of big-brother and all the eyes of the Arab Sphinx Mafia.

#### **G21 Exxon gas prices**

When did the Arabs stop running... or rather corrupting and influencing the United States? Clearly Standard Oil slash Exxon, age 156 is still going strong.

And clearly this company has had some role in why the world is now dependent on Arab oil.  
Clearly we have all underestimated Arab power in the world.

#### **G22 China and US as oil importers**

This graph shows why the Chinese people are only making 10% of the wages of Americans and Europeans  
It is because this maximizes your container trade with the outside world.  
And this maximizes oil sales for your secret Arab masters.

And it also helps undermines the economies

of world's freest nations  
something that's a prime objective of Arabia's slave empire.

**G23 The people don't know their power copy**  
Clearly China is not being run for the benefit of the Chinese people... and the same goes for the rest of the world really. Clearly the world is being run by the ARABS for their own benefit.

And clearly it's time for the world to oust its current opaque Arab-run governments, and muster-up into the new crystal clear and incorruptible people's democracy I explain in the written section.

And it's time to tear down the great wall of the internet, the great wall against invasions of the truth. It's time for China to become a prosperous, and informed PEOPLE'S democracy of China.

And you know, the same Arabs who got you to build this modern wall of the internet, got you to build the ancient great wall... and both walls exist for their benefit, not yours.

The ancient great wall was to keep trade out... not barbarians. The Barbarians were just the provocation, the terrorism that was the excuse for the Arab-fronting emperor to build a wall, or trade barrier.

This way, the Arabs were able to use your government to manage competition and tax their competitors. This way they were able to make money selling China overpriced imported goods.

#### **G24 Gas prices**

After thousands of years,  
we will have a new matrix and a new world.  
Come with me  
I will make the price of energy and raw materials  
**fall by over 75% worldwide...**

#### **G25 real debt fake debt**

Muster up and come with me.  
I will wipe out over 90% of the world's debt,  
our fake debt to the Arabs  
that came from their great oil scam.

#### **G26 Single-wide vs. double-wide cars**

Come with me.  
I establish new standards for single-wide cars  
a bit narrower than an old-style Fiat 500.

These will be network positioned,  
and computer driven so the lane clearances can be smaller. Thus they almost double the capacity of the world's roads  
and more than double its parking capacity.  
Thus we will eliminate most traffic congestion  
in the world's cities, a few cities at a time.

Double-wide vehicles will use two single-wide lanes,  
but will suffer from per mile charges and rules  
that will prevent their use except for transit and deliveries

And these new cars will also get well over twice the

mileage  
due to their lighter weight and smaller wind profile...  
And due to their light weight, they will also cost about half as much to buy.  
And due to their network operation,  
and multi-redundant anti-collision systems,  
they will also be much safer than the current human-driver system  
that kills 40-thousand people in Americans alone each year.

#### **G27 TGV Atlantique**

Come with me for I give the world super-stable double-wide trains.... WHEELED-trains rolling on STEEL tracks... tracks that are almost 4-times as far apart as those today. These are trains with computer controlled acceleration and motion sensors... and track adjustment robots that keep the track **PERFECTLY flat.**

#### **G30 Other fast train**

These are trains that interlock with their I-beam tracks so they can't easily derail...  
AND so they can use the tracks for tethered braking,  
for SUPER-FAST stops when needed.

These are trains on one-way, no-crossing viaducts... viaducts with proper foundations so their tracks will remain relatively stable... and trains with proper noise shrouds so they'll be super quiet.

These are trains that will be faster than all but the longest domestic flights... They are trains that will cost one fifth to one tenth of flying.  
They are trains that will be 50 times safer than self-driving.  
And best of all,  
they're trains that will slash our energy consumption by over 95%  
to the extent we use them instead of driving.

#### **G31 Map of bearing straight**

Come with me, for I bridge both the Bearing Strait,  
and Central Asia with these high-speed railroads.  
Thus the energy IN-efficient shipping of the Arabs becomes obsolete for over 95% of the world's trade.

Come with me for there will be no more wars fought over the seas, as the Arabs seem to be angling for in the South China Sea.

#### **G32 Freedom's forge**

Muster up and come with me.  
I show how national economies actually work better the more we ask of them.  
Just look at how the United States went from the edge of economic depression in 1941 to vertical output in 1944.  
Let me show you all how easy it is to have a war economy worldwide without a war.

#### **G33 poor African kids**

Muster up and come with me.  
The poorest parts of humanity

will obey a 1-child policy  
in exchange for industrialization aid.

### G34 Climate image

Come with me. The idea of manmade climate change is another Arab matrix... a giant self-reinforcing lie to reduce consumption of coal and increase consumption of Arab oil.

### G35 Sphinx pic

And most of all, come with me because I end the 5,800-year rule of the Mideast harem-bred race, and its inverted agenda of less and worse for the rest of the world. Now the group spirit of PRO MEN THEUS awakens and will rule the world exclusively.

## Part-H: Ending

### H1 gorgon from film

This is the great transcendental message for mankind,  
the end of the old world and the beginning of the new world.

The gorgon's 7,000-page reflection  
now plays on every screen in the world.

Ishtar the gorgon now petrifies with fear and dies as it beholds its own hideous reflection... and as it beholds the unbelievable stupidity and 95% wastefulness of its own true nature.

Here is a new and much better way,  
a unified system that will feed the entire world  
and end the human desperation that Ishtar feeds upon.

### H2 Naked emperor

Now think of the emperor that had no clothes. Do you know what this legend is really about? It is about how one day, a boy will come along and say, BEHOLD... here is Ishtar's empire naked with no cloth, weave, or matrix.

You Arabs are immensely fortunate that this boy does not say "Kill them all". And you're fortunate that he gives those who have been following the Mideast's parasitic de-ex-pull, the devil, one last chance to confess all, to repent all, and most of all to cleave to the new prophet of the Middle East.

The spirit of Pro-men-theus is now awakened, and your feeble chains will no longer hold him, now that he is awake. He's everywhere in the world now, on every screen. And he will according to his nature kill Ishtar wherever he sees her.

### H3 Yavno praying to Mecca copy

Many of you are confused about what you are actually struggling FOR. Islam or Ishtar has always been only the means to an end.

It only existed to feed the Mideast until ALL the people could be moved to places than can actually sustain them. This is the true and ultimate objective of your people ... and I present your ancient objective IN—ONE—STEP.

Here are two tickets to paradise, to a much better world for everyone. Here's a shortcut that will bring about your ultimate goal in far less than a decade. Here is a plan for killing Ishtar, and freeing the ENTIRE world from its clutches. But you must all cleave fast to your new prophet with an alternative to the devil's agenda, the parasitic de-ex-pull of Ishtar.

Now is when you all turn against Islam and say how scared you all were to go against the Meccan isms. And really, you have no alternative. Thanks to my 7,000-page message, the old ways of Ishtar and the parasites evil ex-pull will no longer work any more.

This message is the Omega for the old world that PERMITTED the existence of Ishtar and Islam. And it is also the Alpha for the new world, a unified world that will feed and move ALL THE PEOPLE.... and end the horrible waste and stupidity of Ishtar once and for all.

So NOW. NOW is when you all turn against Islam and Ishtar and say "We all lived in fear of the meccan-isms... and we didn't understand." And "We all hated our Mideast obligations and now consider ourselves immensely lucky to be free of them."

### H4 Kaaba cube

While I can offer you amnesty and amnesia ... you must cleave to the new prophet of the Mideast fairly immediately to obtain this. And you must know that I only have to power to obtain this from Pro-men-theus, the good spirit of man, by focusing all outsider rage against the last to cleave... without any limitations at all.

**There shall be total forgiveness for those who immediately cleave against Islam and Ishtar. But there shall be total rage, fury and El's fire brands for those who fail to immediately cleave against Islam, Ishtar, and the totally evil ex-pull of the Mideast.**

If you're Middle Eastern or in any way connected with Islam or Judaism, or the harems, NOTHING will help your life going forward like quickly cleaving against Ishtar and Islam.

There are ten gradations ranging from total forgiveness to total hell, and your category will depend more than anything else on how fast you cleave against Ishtar on posted video as described in the written part of my message.

### H5 Top of the one dollar pyramid

And I must say that if World War 3 happens now, it

was the chosen green harem spawn who did it. These are men with many half siblings, men with identical Y-Chromosomes and mostly dissimilar X-Chromosomes. So they'll be pretty easy to spot genetically once we make the \$3 genetic test kits.

If world war 3 happens now, regardless of the apparent cause, hold these brothers and their female siblings accountable, and do not restrain your rage.

But if there is no world war 3, just forget about punishment and retribution among those who cleave rapidly.

It is best to just end the 5,800-year war, and put everything behind us, to move all the people, and to unify mankind under the agenda of more and better for everyone. A beautiful Eu•tropia is only one step away for mankind... if we all take the step together.

#### **H6 7,000-pages = 3-million words**

I can go on and on about these subjects. In fact I do go on and on, in the written version, which is about 7,000 standard pages long.

I hope this is enough. I hope you all say to yourself that this message is important and that you are going to drop your other plans and spread my files.

And there is no downside to spreading this message. If these ideas are untrue, nothing bad will happen to you by spreading them. But if these words are true, they will clearly help save the world.

#### **Local search: Moving-all-the-people**

And you of the Mideast

This is the very message that the struggle of your people is trying to bring about.

You Arabs must read my special message to you before doing anything else

#### **Part-J The volcanic theory of climate (Parts-I is omitted)**

##### **J1 The volcanic theory of climate change**

##### **Part 1: How the ice caps regulate climate**

Here is an introduction to the new volcanic theory of climate change... a theory which conclusively refutes the CO2 theory of climate change.

##### **J2 How can CO2 be 36-million times more powerful on Earth than on Venus?**

The planet Venus is often used to support the idea of greenhouse gasses and the CO2 theory of climate. People say, look at how Venus has an atmosphere full of CO2 and look how the planet is 445 degrees hotter than Earth.

But few people realize that the supposed greenhouse effects of CO2 must be about 36-million

times more powerful on Earth than on Venus.

##### **J3 Venus atmosphere pressure**

Here's why. Venus' atmosphere is 92 times as dense as Earth's

##### **J4 Venus 96% CO2**

And Venus' atmosphere is 96.5% CO2. Earth by contrast has an atmosphere that is only 400 parts per million CO2.

##### **J5 92 x .965/.0004 = 221,950**

Here are these numbers in an equation. Here we take the density of Venus' atmosphere and multiply it by the ratio of CO2 concentrations for the two planets.

When we do this, we realize that Venus doesn't just have a LITTLE more CO2 in its atmosphere, it has almost 222-THOUSAND times as much CO2 by volume.

##### **J6 460°C = Venus avg. surface temp**

##### **15°C = Earth's avg. surface temperature**

##### **445°C = difference**

##### **221,950/445°C = 499**

And Venus averages about 445 degrees hotter than Earth. So for each degree Venus is hotter than Earth, it has almost 500 times as much CO2.

##### **J7 170-300 CO2**

Now back on Earth, CO2 levels have run around 170 parts-per-million at ice age bottoms. And except in recent decades, they only get up to around 300 parts-per-million in warm ages.

And 170 parts-per million is just **over** 1-in-6,000. And 300 parts per million is just **under** 2-in-6,000.

And according to all ice core climate data, this 1-in-6,000 change in CO2 levels corresponds to about a 12°C change in Antarctic temperatures.

And if we multiply these two numbers together, we realize that on Earth, each degree hotter corresponds to a tiny 1-in-72,000 change in CO2 levels.

##### **J8 On Venus 500 times more CO2 = 1°C**

##### **On Earth 1/72,000th more CO2 = 1°C**

##### **500 x 72,000 = 36,000,000**

Now let's compare the two planets:

On Venus, 500 times more CO2 equals 1 degree Celsius,

while on Earth, 1-in-72-thousand times more CO2 equals 1 degree Celsius.

If we multiply these two numbers, we get 36-million. So the effect of CO2 is supposedly 36-million times stronger on Earth than on Venus.

How can this be?

And doesn't such a wide discrepancy in the power of CO2

sort-of disprove the greenhouse gas theory of climate

all by itself?

For how could CO<sub>2</sub> be 36-million times more powerful on Earth than on Venus?

Clearly there is no relationship between CO<sub>2</sub> and temperature when comparing Earth and Venus.

#### **J9 "How big is mankind in proportion to the environment?"**

New subject. How big is mankind in proportion to the environment? Do you have a clear understanding? And if you don't have a clear understanding, how can you make sound environmental policy decisions?

I mean, what if the environment was actually ten, or a hundred, or a thousand times bigger than you thought in proportion to mankind?

#### **J10 14 stick figures = 1 cubic meter of water**

Let's say the average human weighs 71-kilos or 157 lbs., then 14 humans would weigh a thousand kilos. This is the weight of 1 cubic meter of water by definition.

#### **J11 cube**

And a cubic kilometer is 1,000 meters by 1,000 meters by 1,000 meters, or a billion cubic meters. Thus 14 billion humans would weigh about as much as a cubic kilometer of water. Thus the 7 billion humans alive today weigh about as much as half a cubic kilometer of water.

Now remember that number. All the humans alive today weigh about as much as half a cubic kilometer of water. Half a cubic kilometer.

#### **J12 The oceans weigh**

#### **2,800,000,000 times as much as mankind**

Now Earth has almost 1.4 billion cubic kilometers of water. Thus, all the water on Earth weighs about 2.8-billion times as much as humanity. Look at all those zeros.

#### **J13 Al-Gore-ocean circulation**

Did mankind really do something that warmed 2.8-BILLION times its weight in water? And the oceans DO CIRCULATE. Here is Al Gore showing us how the oceans circulate in his recent film.

#### **J14 The Average Walmart is 9,700 square meters, (106,000 sq. ft.), and has a 6.1-meter ceiling**

2 point 8 billion is just an ENORMOUS number. To put this ratio in perspective, the average Walmart store contains about 60,000 cubic meters of volume. If we divide this volume by 2.8-billion, we get 21 cubic centimeters, or about the volume of a man's index finger.

Thus to compare the mass of mankind to the mass of Earth's hydrosphere is to compare a finger's volume of water with the volume of water that could be contained by a Walmart store.

How can it be that this tiny finger amount of matter is altering the temperature of the other immense amount of matter? And how could we by any means direct, or indirect, cause 2.8-billion times our weight to warm by any measurable amount? Of course we couldn't possibly have done this, even if we tried. The hydrosphere is just too big in proportion.

#### **J15 1-in-10,000 = 100 parts per million**

Now CO<sub>2</sub> levels have gone from about 300 to 400 parts per million over the past century. Thus humanity seems to have increased atmospheric CO<sub>2</sub> by 1 part in 10,000 — because that is what 100 parts per million is... its 1 part in 10,000.

And supposedly this 1 part in 10,000 of increased CO<sub>2</sub> has altered the ENTIRE way our planet holds on to heat. And because of that, humanity has warmed 2.8-BILLION times its weight in water. But could mankind have warmed 2.8 billion times its weight in water by any means at all? It simply doesn't seem possible

#### **J16 Earth's atmosphere has 10.4 million times the mass of mankind**

Even Earth's atmosphere has a mass that is 10.4 million times the mass of mankind. How will we ever pollute such an immense atmosphere?

And how can we be so silly as to worry much about global air pollution given the true scale of Earth's atmosphere?

Even if every human alive today causes 10 times his weight in air pollution to permanently REMAIN in the atmosphere, it will still be less than 1 part in a million.

And harmful gasses are harmful because they are reactive. So by nature, they quickly react away and don't remain in the atmosphere for long.

#### **J17 Smog photo**

So manmade air pollution is never going to harm the planet, because mankind is simply too small in proportion.

Thus we realize that air pollution is only an urban problem and mostly just a problem for cities in basins, like Los Angeles and Mexico City — where the wind doesn't diffuse the pollution.

#### **J18 US Ford Focus art 40mpg**

Thus we realize that it's dumb and unnecessary to require that our vehicles be 98% clean in terms of exhaust emissions.

#### **J19 Euro Ford Focus 80mpg**

Instead, we might only require that our vehicles be 90% clean in terms of exhaust emissions. This way they can get over twice the mileage... like this European version of the same car.

And of course this would cut our consumption of OPEC's oil by half. And of course

OPEC will hate this. So it will go on directing money to candidates, lobbyists, scientists, journalists, universities, and propaganda that talks about how air pollution is such a terrible problem.

This way our corrupt democracy will have a plausible excuse for the super-strict pollution standards that cut vehicle mileage by half or two thirds, and double or triple our consumption of OPEC's oil.

#### **J20 Earth's overall mass is 6087 times that of its hydrosphere**

#### **The hydrosphere's mass is 2.8-billion times that of mankind**

Now lets get back to the oceans, or more specifically the hydrosphere, which has 2.8 billion times the mass of mankind. According to the CO<sub>2</sub> theory, we puny humans have warmed 2.8 billion times our weight in water.

But according to the new volcanic theory of climate, our planet's surface temperature is primarily the result of variable gas and heat leakage from our giant planet's hot molten center. And our planet has a mass that is over 6-thousand times that of its oceans.

Now isn't it just common sense that big heavy things tend to affect the temperatures of tiny light things, rather than the other way around? And isn't it just common sense that variable heat leakage from within our planet is warming the oceans which weigh 6,000 times less?

And isn't it just a ridiculously leveraged explanation to think that mankind is actually warming the oceans which weigh 2.8-billion times more?

#### **J21 Seafloor age in color**

This is a map of the planet's new seafloor by age. It's a pretty good indication of the portion of the planet's surface that has been accreted over say the last hundred million years... along Earth's 80,000-km long seafloor rift system.

And it is widely accepted that hot magma bubbles up and accretes to the sea floor at the seafloor rift, also called the seafloor ridge.

And this accreting of hot magma is the driver of seafloor spreading and earthquakes and volcanos on Earth, as well as continental drift.

#### **J22 Clip of heat ripples in water at the ridge**

Look at the heat ripples in the water. Now ponder how this volcanic water heater operates 24-hours a day, every day — and it is 80-THOUSAND kilometers long.

#### **J23 Plates and movement**

And here we see how the seafloor rift accretes about 8-cm of seafloor on average each year. And according to seismologists, the seafloor is about 60km thick on average.

#### **J24 0.00008km x 80,000km x 60km = 384 cubic km**

If we do the math, this comes to 384 cubic kilometers of rock accreted each year on average from the super-hot and totally molten center of our planet. This is accreted to our planet's somewhat hot seafloor rift.

#### **J25 2,304 times the mass of mankind each year**

And given that this sort of basaltic rock is about 3 times the mass of water, and mankind has a mass equal to half a cubic kilometer of water, this annual accretion of rock has a mass that is about 2,300 times the mass of mankind.

And here's a volume of rock that is cooling by thousands of degrees over time. (from around 5,000 to around 500°C).

So this is over a billion times the mass of mankind that is constantly leaking out from within our planet and cooling by 1 degree Celsius in each century.

So I ask you is climate change from variations in this massive amount of heat leakage along the seafloor rift? Or is it due to a tiny 1-in-10,000 change in Atmospheric CO<sub>2</sub> levels?

#### **J26 384 x 3 x 4,500°= 5,184,000**

Let's look at these numbers another way. Each year, seafloor spreading on average accretes enough magma to warm about 5.2-million cubic kilometers of water by 1°C. This is enough to warm the entire hydrosphere by 2°C in 538-years.

But this spreading rate is the long term average, including both ice ages and warm ages. And CO<sub>2</sub> levels run about 50% higher during warm-ages.

So we should expect seafloor rift activity to be more than 50% higher during warm ages. Thus the hydrosphere will warm by 2°C in less than 360-years, and perhaps in as little as say 300 years

#### **j27 Triple graph**

And here's a graph that shows how during ice ages, volcanic ash levels in the atmosphere get well over a hundred times higher than they are today  
And we should expect the shading from this volcanic ash to be much lower at the equator where the sunlight passes almost straight down through the atmosphere at mid-day.

And in the polar regions where the sunlight passes diagonally through the atmosphere, the light filtering is 3 to 10 times higher. Thus we should

expect more exaggerated ice age temperature swings in polar regions, as atmospheric ash levels rise and fall.

### J28 Global temperature graph

And you know, the Antarctic ice core data IS from a polar region of the planet. And during ice ages, the polar regions cool much more than the other parts of the planet.

The poles are about 12° colder than today while the planet overall is less than 4° colder...

This incidentally, is a very important fact that seems almost intentionally hidden by the nomenclature of this graph. For why not simply state the corresponding Antarctic temperature?... Why use the utterly meaningless term Antarctic Temperature Units? unless of course you are trying to hide the truth rather than shine light on it.

And while we are on the subject of hiding the truth in climate data graphs... note how the data lines are shown super-imposed here. This is actually QUITE unusual in studies supporting the CO2 theory of climate.

### J29 separate data lines

In fact, MOST of these pro CO2 theory graphs have separated data lines like the graph shown here. But why would anyone show these data lines separated if they were trying to show the correlation between them? Why not always super-impose them? It doesn't make any sense, does it? Unless these people are trying to hide the truth.

### J30 temp leads CO2

Also, the Antarctic climate graphs with super-imposed data lines generally show that changes in CO2 levels occur **before** changes in temperature as we see here.

And strangely, the graphs with separate data lines generally hide this fact...

And this IS a mortal problem with the CO2 theory of climate. I mean, how can CO2 be the cause of temperature change if temperatures change before CO2 levels.

### J31 Lapse Rate

Now let's return to the idea that during ice ages, the polar regions cool much more than the other parts of the planet.

The poles are about 12° colder than today while the planet overall is less than 4° colder.

And if outgassing is a main driver of earth's

temperatures, We should also expect the colder ice age atmospheres to be **thinner** like when we go to higher altitudes.

So perhaps during ice ages, the oceans cool by 2°C, while the atmosphere thins and cools by 4°C on average, and in the polar regions by 12°C.

Thus if something were to turn seafloor spreading on and off, it would account for 1/3 or 1/2 half of the fastest temperature swings we observe in the Antarctic ice core data.

### J32 Pinatubo solar shading

And skies filled with volcanic ash certainly play a role in atmospheric temperatures. This is plainly evident from recent eruptions and from the Antarctic ice core record.

For example, the eruption of the Tambora volcano in 1816 caused temperatures in London to average 6.7°C below normal all summer. And this is why 1816 was called the year without a summer.

### J33

- **seafloor accretion rate**
  - **volcanic gas leakage rate**
  - **atmospheric density**
  - **volcanic ash**
  - **exaggerated effects of volcanic ash**
- Now when we put all these factors together, the changes in the seafloor accretion rate, the changes in atmospheric density, the changes in volcanic ash levels, and the exaggerated effects of volcanic ash at the polar regions, we have a new climate model.

And we have a climate model that actually accounts for the rapid temperature swings we see the ice cores — unlike the CO2 theory of climate, which can't be modeled... because it involves such an incredible leverage of scale.

### J34 Who benefits most from it?

Now who benefits most from the CO2 theory of climate? Isn't it OPEC and the desperate land of no resources except oil? And isn't the CO2 theory of climate the main reason why we are phasing out coal and oil sands through carbon trading and buying more of OPEC's oil?

Maybe the desperate land of no resources sponsored some science propaganda so it can be rich and powerful instead of poor and desperate.

### J35

**Plato, d. 347BC. Phaedo, 108e**

"the earth is spherical"

#### Aristotle, d. 322BC, Meteorologica

"The horizon [of the stars] changes with a change in our position [on Earth]. This proves that the earth is... spherical!"

In addition to these two quotes the written part of my message has 17 more quotes from ancient Greek and Roman authors that show how people knew the earth was spherical.

And altogether I've found 19 ancient quotes that indicate a round earth, and I have never found one that in any way suggested that the earth was flat. Not one.

Now recall how Columbus proved that the world was not flat and there was no risk of explorers sailing off the edge. Clearly, between the fall of Rome and the time of Columbus, we forgot that the world was round. And we also forgot how to go around the Arabs and get to Asia.

So who was pushing the ridiculous science propaganda about the earth being flat? And who hid the knowledge of how to get to Asia?

Clearly it was the Arabs saying this to keep us from sailing around their highly profitable "spice" trade... their monopoly on all trade between Europe and Asia

So it seem that these days the desperate land of no resources, has invented a new batch of science lies, to help it better feed on the outside world. This time about climate change

#### J36 soda bottle being opened and starting to bubble

New subject. Imagine the bubbles slowly coming out of some soda and rising to the surface. In a similar way, primordial gas constantly bubbles out of Earth's molten or liquid center to replenish the atmosphere. The quantities and distances are immense, so our planetary soda bottle takes billions of years to go flat.

#### J37 Mt.St. Hellens ashing

This is the new volcanic air that we clearly see exploding from volcanos. And this new volcanic air can also be found in the water streaming out of the seafloor rift.

#### J38 clip of volcano burping magma

And if we exclude water vapor, which is really just surface contamination, this new volcanic air is 95 to 96 percent CO<sub>2</sub>, EXACTLY like the atmospheres of Mars and Venus our sister planets.

Also, note how the super high pressure volcanic air bubbles are propelling the molten magma upward here.

#### J39 Dover cliffs

This is the new volcanic air that replaces the CO<sub>2</sub> constantly lost when seashells and bones get buried. Just consider of the famous chalk-white cliffs of Dover England — cliffs that are hundreds of feet tall. Note the tiny people standing on top of the cliffs

#### J40 Chalk explained

These cliffs are white from calcium-carbonate in seashell that have been mostly pulverized, although many were fossilized and are still to be found.

#### J41 fossil sedimentary stone

Marine creatures took calcium and carbon dioxide from the oceans and atmosphere and turned it into shells and bones. Then they died and fell to the sea floor and were buried more or less forever, along with immense amounts of carbon.

#### J42 uplift

Later the seafloor was raised due to the well-accepted theory of continental uplift, where earthquake hammering compresses and raises the continents over millions of years.

#### J43 Sequestered carbon

Massive sedimentary carbon deposits like Dover are all over the planet. And here's a college textbook illustration about that fact.

All that carbon bubbled out of the planet as new volcanic air before it was accreted back to the surface (and interior) of the planet by life-forms.

Incidentally, this illustration is terribly out of scale. The ratio of 10 units to 50-million is the same ratio as 3 square centimeters to the area of 126 automobile parking spaces.

In other words, the two bottom rectangles combined should be about the size of 126 typical parking spaces.

And finally, I want to say that given the minimizing nature of this illustration, the numbers stated may also be a minimization.

#### J44 Plates and movement

Now recall Earth's 80,000 kilometer seafloor-ridge system.

This is well documented as a volcanic hot-zone, a planet-scale volcanic water heater operating 24-hours a day, every day. Here is where most of the CO<sub>2</sub>-rich new volcanic air bubbles escape.

#### J45 Sealed bottle of soda opened clip

Yet there are few bubbles in the water because high-pressure water

can contain lots of gas without bubbles—just like a sealed bottle of soda.  
Open a bottle, and lower the pressure, and bubble appear, due to the lower pressure.

#### J46 ridge depth

Now the sea-floor-rift averages 2.5km under sea level. Here, immense pressure not only permits bubble-free soda-water, but it also permits water to remain un-boiled at extremely high temperatures, just like in a pressure cooker.

#### J47 Hot water at rift with visible heat distortion

In some places,  
the water in seafloor ridge vents  
has been measured at over 400 degrees celcius  
This is almost 412 degrees  
the temperature where steel-frame buildings  
first start to barely soften and weaken in structure  
fires.  
And it is close to 460 degrees  
the temperature where some forms of magma  
become not entirely solid.

#### J48 Columnar basalt at rift

So here, at the sea floor rift, the planet's hard shell is hot, thin and barely solid. And here is where super high-pressure volcanic gas bubbles melt, break and force their way through the thinnest part of Earth's skin.

And these gas bubbles come up from deep within our planet. And they normally come up as a froth... of gas mixed with super-hot magma

#### J49 tongue frozen

When the gas propellant escapes from the froth, it leaves behind the super-hot magma... it leaves this to cool and accrete to the seafloor rift. And on a geological time-scale at least, this cools about as fast as a person's tongue touched to frozen metal. So it takes hours or years to cool and grow progressively more viscous.

#### J50 Columnar basalt Mexico

Thus we see how when there is more gas leakage, there is also more magma and heat leakage. And when gas leakage slows, so does heat and magma leakage from the planet's hot and molten center.

#### J51 Columnar-basalt-at-sea

So the reason why temperatures move in step with CO<sub>2</sub> levels does not have to do with any greenhouse gas effect. It is because each bubble of new volcanic air that escapes from our planet is about 95% to 96% CO<sub>2</sub>... and each bubble tends to be followed by a column of molten basalt that warms the oceans.

#### J52

1) CO<sub>2</sub> drives climate (The old CO<sub>2</sub> theory of

climate) 2) Climate drives CO<sub>2</sub> 3) Another thing drives both CO<sub>2</sub> & climate (the new theory)  
Now there is undeniably a relationship between CO<sub>2</sub> levels and climate. Nobody questions the correlation. However, there are three possible CAUSALITIES for this relationship.

Either CO<sub>2</sub> drives climate, or climate drives CO<sub>2</sub>, or another thing, namely seafloor spreading, drives both CO<sub>2</sub> and climate.

So... what I am saying is... that we have had the causality of this relationship wrong thanks mostly to a bunch of OPEC propaganda designed to reduce our consumption of coal, oil shale, and oil sands.

#### J53 24,000yr-sea-levels

New subject.  
Now we know from drilling coral reefs  
that sea levels were about 140 meters lower 21,000  
years ago.  
And this was at the bottom of a particularly cold ice  
age,  
with particularly high levels of volcanic ash.

So we not only have a consistent bottom  
temperature  
for Earth's climate,  
but we can also infer a consistent bottom sea level  
about 135m lower, only briefly reaching 140m  
in the last particularly deep and ash-filled ice age.

#### J54 shelf topo art

Now outside the polar regions, the average depth of the continental break is also about 135 meters below sea level.

The continental break is where the barely sloping continental shelf abruptly becomes the continental edge, and a much steeper descent to the deep sea floor... as depicted here.

Clearly, sea-erosion of the continents is something that mostly happens near the ocean's surface, in the wave and tidal zone. Then, over the eons, and countless climate cycles, as sea levels cycled between ice-ages and warm-ages, wave and tidal action eroded the continental shelf.

The remarkable abruptness of the continental break speaks of a climate bottom that has remained relatively constant for eons. If the climate bottom temperature had varied by much, the continental break would have a rounded edge, not the remarkably abrupt edge we see.

#### J55 second aporia

And here is a graph of planetary temperature over the past 800,000 years. Here we clearly see a remarkably consistent climate bottom. And obviously sea levels repeatedly fell to about 135 meters lower.

And the way climate bottoms coincide with the continental break — this still makes perfect sense within the CO<sub>2</sub> theory of climate. A remarkably consistent climate bottom eroded a remarkably

consistent continental break in all the places where ice caps do not form, and depress the continents.

The problem — the fact, or one of many facts that disproves the CO<sub>2</sub> theory — is how planetary temperatures and CO<sub>2</sub> levels peak right when the planet starts running out of ice to melt.

You see, in each of the 5 last climate tops, during the period where we have believable ice-core data... planetary temperatures approached a couple degrees higher than today.

And obviously, a couple degrees higher, and the planet will start running out of ice to melt. After all, its already starting to run out of ice to melt, isn't it?

Now surely it can't be a mere coincidence that Earth always starts running out of ice to melt right when temperatures and CO<sub>2</sub> levels peak.

**J56 CO<sub>2</sub> >> climate temperatures >> ice cap size  
Ice cap size >> sea levels >> climate temperatures**  
But under the CO<sub>2</sub> theory,  
it must be a mere coincidence.

You see, according to the CO<sub>2</sub> theory,  
CO<sub>2</sub> levels determine climate temperatures,  
which then determine ice cap size —  
and not the other way around.

So under the CO<sub>2</sub> theory,  
it must be a mere coincidence  
that Earth always starts running out of ice to melt  
RIGHT when climate temperatures peak —  
a coincidence repeated in all 5 of the 5 recent warm  
ages we have reliable ice core data on.

But surely this can't be a coincidence.  
Surely the running out of ice to melt  
must cause climate temperatures to peak.  
And sea levels must in some way drive CO<sub>2</sub> levels,  
rather than the other way around.

Now the new Volcanic Theory of Climate  
solves the fully melted ice cap coincidence.  
And it also solves the theory-killing problem  
presented by the fact that climate temperature  
changes actually precede changes in CO<sub>2</sub> levels.

#### **J57 SF ridge under deeper oceans warms**

The new Volcanic Theory says  
that when the planet's surface is warming and melting  
ice,  
the oceans deepen.  
This causes the already hot and soft rock at the sea-  
floor-rift  
to grow a bit hotter and softer,  
just as if it was buried deeper underground—  
only its buried with water, not rock.

Then the softer rift permits more bubbles of  
new volcanic air to force their way way out of the  
planet—bubbles that are 95.5% CO<sub>2</sub>. And with  
these bubbles come more columns of the super-hot

magma froth that normally comes up with them up.

Thus increased seafloor spreading further  
warms the planet's surface, melts more ice, deepens  
the oceans, and softens the seafloor rift still more,  
allowing still more CO<sub>2</sub> and heat leakage.

Then the increases in CO<sub>2</sub> and heat leakage  
continue on feedback-style until Earth starts running  
out of ice to melt. At this point, ocean deepening  
slows greatly, or stops, and then the system becomes  
more vulnerable to reversal than continued warming.

And this is the main reason why Earth's peak  
temperatures coincide with the approach of fully  
melted ice caps. And at this point in the climate  
cycle,

Earth is far above its average temperature.  
So at some point, due to either volcanic eruptions,  
or decade-scale climate variability,  
the process reverses and it reverses in feed-back  
style.

More ice causes shallower oceans. This  
makes the seafloor rift more solid, permitting less  
outgassing, less heat leakage, and causing still more  
ice to build.

#### **J58 ridge depth**

There's a one hundred and 35-meter change between  
ice-age and warm-age sea levels. This is about a  
5.4% change in ocean depth at the seafloor ridge —  
which averages 2.5km down.

#### **J59 Columnar basalt at rift**

And the seafloor rift is hot and thin, and poised at a  
tipping point. Thus a small change in ocean depth has  
a significant effect on the rift's strength, gas  
permeability and heat leakage... Thus we see that  
Gaia's primary thermostat is a pressure mechanism  
as we might expect — a pressure mechanism  
regulated by ice cap size and ocean depth.

#### **J60 seafloor spreading drawing**

Now again, when the 'soda bubbles' of new volcanic  
air force their way out of the planet, they tend to come  
up as a froth of high-pressure gas and super-hot  
magma from down deep. When the gas escapes to  
the planet's surface it mostly leaves the relocated  
super-hot magma behind.

As this magma cools, it gives off heat and  
warms the planet's oceans and surface. But in  
cooling, it also accretes as rock the sea floor rift. So  
while the bubbles of new volcanic air replenish the  
atmosphere and warm the surface, they also drive  
sea-floor spreading.

Then this spreading drives earthquakes,  
plate margin volcanoes, and continental drift. Thus  
these 'soda bottle' gas bubbles are Gaia's primary  
driving force, directly or indirectly giving rise to all  
active geology, as well as atmosphere and climate.

#### **J61 triple graph**

What will be end result of global warming? Will the Earth warm without end? Or will it cycle into another volcanic ice age as it has in the past... and as we see in this graph?

First, let's back up a little bit and take a fresh look at the nature of volcanos... and the high levels of volcanic ash in the Antarctic ice core record.

The graph you are looking at here is essentially the same graph that Al Gore used in his film. The main difference is that this graph also shows volcanic ash levels.

Here we see the clear DIRECT correlation between atmospheric CO<sub>2</sub> levels and climate. Look at how the blue temperature line and the green CO<sub>2</sub> line move in step with each other.

But also note how there is a clear INVERSE correlation between the blue temperature line and the red volcanic ash line at the bottom of the page. When there is more volcanic ash in the skies, Earth obviously gets colder... as we would intuitively expect.

#### **J62 Pinatubo solar shading**

Also scientists have also measured how much of the planet's sunlight was filtered by volcanic ash after recent volcano eruptions. And here we see how the comparatively tiny eruption of Mt. Pinatubo cut solar energy for the planet by about 5% for almost two years.

In human terms, this is a huge amount of heat our planet lost, many times more heat than was released by all the fossil fuels ever burned by mankind.

#### **J63 141 Pyro-helio-metric graph**

And here is another Pyro-helio-metric chart from the eruption of Krakatoa in 1883, along with three other eruptions. Clearly the way volcanic ash reduces solar energy is quite real, quite well documented, and quite frequent.

Here are three eruptions that each cut worldwide solar energy by 11 to 16%. Also, note the way Krakatoa cut worldwide solar energy for 4-years.

#### **J64 triple graph**

And to be clear, recent eruptions, including the 1816 eruption of Tambora don't even show up in comparison to the ice age ash levels that we see in the ice cores.

The Tambora eruption caused 1816 to also be known as the year without a summer, causing temperatures in London to be 12°F (6.7°C) below normal.

And Tambora doesn't even show up on the red line indicating the level of volcanic ash pollution during recent ice ages.

#### **J65 clips of volcano erupting**

Now if we look at most volcanic eruptions we normally see immense volumes of volcanic gas

and ash moving at explosive speed. But when we look at the subsequent lava flows, they tend to be small and slow in comparison. Clearly volcanos are driven by outgassing, by new high-pressure volcanic air bursting out, or erupting out from our planet, and into the relative vacuum of its atmosphere.

#### **J66 soda bottle**

To understand this outgassing, Let's again compare the planet to a bottle of soda water. Both are gas-infused liquids in a container.

And if there is an opening, both depressurize and both outgas, or bubble out CO<sub>2</sub> gas. The planet is of course much larger, under much more pressure — and it takes billions of years to go flat.

#### **J67 soda bottle spray out**

#### **soda bottle spray out clip**

Now let's consider the way volcanos lay dormant for thousands of years, and then over a brief time they erupt. Clearly the soda-bottle outgassing gets trapped and builds up pressure. Then it's released all at once in a giant eruption.

#### **J68 ridge depth**

The water pressure at the seafloor ridge gives us some idea of volcanic gas pressures within our planet.

The gas pressure must be higher than the water pressure at two and a half kilometers down, or the gas would not be able to escape.

So we know that the volcanic gas pressure is quite a bit higher than 200 atmosphere's. So we are talking about quite a high pressure soda bottle.

#### **J69 Pumice-and-scoria**

And the bubbly nature of most rock blown out of volcanos is plainly evident. So volcanic gas and magma don't seem to exist as separate things really.

#### **J70 bubbly lava rock**

Instead it seems to largely exist as rock froth or foam of varying concentrations.

#### **J71 Soda fizz clip**

Here is some dynamic water foam to help understand the dynamic rock foam that exists under the planet's hard shell, under its lithosphere, and is constantly building pressure in most active volcanoes.

### **J72 Soda can explosion**

And when a volcano becomes active,  
soda bottles are again a good model.  
Just imagine a shaken bottle of soda the size of a  
mountain.

And inside the bottle  
is many cubic kilometers of molten rock foam  
And everything is pressurized at over 200  
atmospheres.

And try to imagine the bottle cap  
as thousands of long drain pipes all clogged  
with wet volcanic ash silt. That is what a volcano is.

### **J73 Vesuvius mouth**

The biggest eruptions frequently involve huge  
explosions and exhalations through a comparatively  
tiny nozzle hole in the planet's skin. I mean, just look  
at the size of the nozzle hole at Vesuvius.

This hole is sort of like the tiny nozzle hole  
on a spray paint bottle. Also, in both cases there's  
much high pressure gas and much liquid under the  
tiny hole. And in both cases the gas and liquid come  
out as an aerosol mixture, the gas propelling the  
liquid.

### **J74 microscopic ash particle**

As with aerosol bottles, the escaping volcanic gas  
tends to blow the volcanic rock froth to tiny bits,  
aerosolizing it. In fact, this frequently causes the  
molten rock to be blown into a microscopic version of  
bubble bath foam, as can be seen by this image.

This volcanic ash particle is a tenth of a  
millimeter across, and it has hundreds of micro  
bubbles in it. So it is no wonder this volcanic ash is so  
FLY•able and tends to stay flying and airborne for a  
long time.

Also, here we understand volcanic ash as an  
aerosol, a solidified aerosol. When the liquid aerosol  
hits the cool air and relative vacuum of the planet's  
surface it quickly cools and solidifies and its form is  
preserved.

With bigger eruptions, not only are larger  
amounts of super-hot volcanic ash exploded into the  
sky, but the particles are blasted to even smaller bits  
and thus more flyable.

On top of this, the heat from the biggest  
eruptions punches high into the atmosphere, even  
into the planet's dry stratosphere. And once there, it  
apparently takes decades, if not centuries for the ash  
levels to tail off and the skies to grow clear and blue  
again, and for the stars to become visible again.

It is also worth mentioning that drier and  
thinner ice age atmospheres not only have a lower  
stratosphere, but the atmosphere is also drier  
overall. So smaller eruptions will make it into the  
stratosphere in ice ages. And even eruptions that  
don't make it to the stratosphere take longer to wash  
out of the drier atmosphere.

### **J75 Ash-heap-volcano**

With tiny eruptions, the ash tends to be trapped by the  
ash heap itself, sometimes causing the volcano's ash  
cone to grow with astonishing speed.

### **J76 paper towels**

Now dry volcanic ash does not offer much resistance  
to escaping volcanic gas and the ash it brings up. It is  
sort of like 8-layers of dry paper towel. If you press  
this dry paper towel stack to your mouth, you can  
easily blow air through it.

On the other hand, if you wet the same 8-layers of paper towel, and press them hard between  
your palms — to press out all the excess water out—the membrane becomes noticeably harder to blow  
through. A similar thing happens with ash mud when  
it's wet and is under pressure. And in this way, wet  
ash tends to trap gas and builds up gas pressures.

### **J77 fissures filled with water drawing**

The formation rock we see around all of the world's  
volcanos is typically heat fissured. Where there is no  
surface water, the volcano's gasses can escape  
harmlessly.

But where there is surface water, the water  
flows in and creates percolation channels that trap  
volcanic ash. Over time, the ash content grows until  
the material eventually become hard packed ash  
mud.

And in comparison to dry ash, this hard  
packed wet ash mud tends to be considerably less  
porous with respect to gas leakage, especially when  
we are talking about narrow fissures that are  
thousands of meters tall. As a result, gas pressures  
build up in volcanos when they are wet. In fact wet  
volcanos can be viewed as naturally self-clogging and  
self-pressurizing.

But when wet volcanos dry out,  
the ash mud reverts to its porous state.  
And once hot gas starts flowing through a porous  
area,  
heat convection causes more drying of surrounding  
areas,  
and thus still more "ash plugs" dry out grow porous.

Thus we see a cascade effect,  
that culminates in the sudden explosive eruption  
of trapped volcanic gas.

And frequently this is many thousands of  
years  
of trapped volcanic gas exploding forth all at once...  
bringing up and aerosolizing many cubic kilometers  
of magma froth all at once.

### **J78 triple graph**

And some of the volcanoes

on and near the continental shelf  
only dewater late in ice ages.  
So it's sometimes 110,000 years of trapped gas  
pressures  
that are exploding out all at once.  
And some volcanoes may even tend skip  
a number of ice ages before erupting.

Most of the planet's active volcanoes  
are around the shores of the oceans —  
where the seafloor subducts and melts.  
This releases the ample gas  
that was trapped under the seafloor at its formation.  
In fact, the underside of the seafloor  
is probably saturated with gas by nature.

**J79 side by side volcanos with and without water.**  
Now if the subduction zone is always dry,  
the melt-gas doesn't get trapped or build up pressure.  
Instead it bleeds out harmlessly into the atmosphere.

However, if there IS water  
in the normally heat-fissured rock,  
then the melt-gas tends to get trapped  
and generate ash mud plugs.

This causes a build-up of gas pressure  
that goes on until there's either too much gas,  
or more frequently, a decrease in water.  
In either case the end of the build-up  
is a sudden eruption of the trapped gas —  
along with whatever molten material the gas brings up  
with it.

**J80 new map of volcanos worldwide**  
The role of water in volcano formation  
is easily seen by looking at a map of Earth's active  
volcanos.  
Active volcanos are exponentially more common near  
surface water, be it an ocean or a fresh water source.  
Although there do appear to be a few Ancient  
volcanos  
that stubbornly refuse to heal and go dormant.

**J81 Crater lake**  
And a truly remarkable number of active volcanos  
have lakes in their calderas.  
These lakes are another indication of the role of water  
in volcanic eruptions.

**J82 North America volcano map**  
Also, the dry desert areas on the ring of fire  
have far fewer active volcanos.  
For example, the dry areas of California and Mexico.

**J83 South America volcano map**  
And the Deserts of South America  
also have far fewer volcanos,  
than the surrounding wet areas on the ring of fire.  
So again we see that surface water  
clearly has SOME ROLE in volcano formation.

#### **J84 Shelf profile**

Let's get back to the continental shelf  
which averages about 60-kilometers wide.  
And the average continental break  
is about 130 to 140 meters down (depending on how  
we define it).  
So the average continental shelf is almost flat,  
with a slope of about one quarter percent.

In other words,  
the average continental shelf has an incredibly  
shallow slope.  
It drops only 2.3-meters per kilometer  
until we reach the continental break,  
then there is a much steeper slope to the deep sea.  
This textbook drawing is incidentally extremely  
exaggerated.

#### **J85 penny drawing**

The true slop or rather flatness of the continental shelf  
is shown here to scale.  
Only if you look carefully can you see the slope.

Also, this is about one tenth of the 2% slope  
that people generally try to engineer  
into their walkways and roadways  
..so that surface rainwater runs off properly.  
So the continental shelf,  
with respect to water movement at least, is essentially  
flat.

#### **J86 Bay of Fundy clip**

In fact the average continental shelf  
is quite like sea in the Bay of Fundy shown here.  
Note how a tiny increase in sea levels  
from the daily tide coming in  
causes the shoreline to move miles inland.

#### **J87 triple graph**

Now again, if we look at ash levels from the Antarctic  
ice cores, they rise when earth cools, and fall when  
earth warms.

On top of this, when temperatures fall so low  
that sea levels reach the continental break, we see an  
almost total end to volcanic ash in the ice cores.

Then the skies clear and the planet  
experiences a brief clear-skied blue phase such as  
we have had during the past 18,000 years or so.

#### **J88 slope drawing**

The reason for all this seems to be the flatness of the  
continental shelf. And that for every 2.3 meters that  
sea levels fall in an ice-age, the oceans retreat an  
incredible 1-kilometer away from all of the world's  
many coastal volcanos on average.

This is clearly much less than the slope  
needed for water to penetrate through cracked rock.  
After all, it is one-tenth of the slope generally used to  
drain surface water.

Thus many volcanos dry-out and erupt as sea levels fall, and more importantly as coastlines retreat AWAY FROM the world's coastal volcanos.

But when sea levels fall below the level of the continental break, coastlines stop retreating and merely fall. After this, further falls in sea level tend to have a greatly reduced effect on volcano dewatering.

Thus there are far fewer eruptions. Then the skies clear, and the planet enters its clear-skied blue phase where the planet rapidly warms under clear blue skies.

#### **J89 Bay of Fundy clip**

And when sea levels rise, the coastlines advance rapidly, and the presence of seawater tends to trap gas, build up volcano gas pressures, and stall eruptions.

But this increased irrigation of the planet's volcanos doesn't go on forever, because there is a limited amount of ice on our planet to melt. And once the ice mostly melts, the rise of sea levels slows and then eventually stops.

#### **J90 How does global warming end?**

So let's answer the big question: ...How does global warming end? or more importantly, how does the world as we know it end and the next ice-age begin?

#### **J91 Drawing of seas down to continental break**

At some point there will be a large volcanic eruption and the planet will be enveloped by a worldwide volcanic haze for some years.

And incidentally, this volcanic haze seems to have been recorded by the ancients, who called it the 'end of days', the end of bright sunny days. and the beginning of a perpetual daytime volcanic twilight

This will cause less rainfall... which will tend to cause more eruptions especially among volcanos irrigated by rainwater runoff.

As well the lower temperatures will cause the loss of meltwater to some of the planet's volcanos. And this will tend to cause more eruptions among volcanos irrigated by meltwater.

But given the slow rate of ice build-up at the poles, it will probably take more than a century to lower sea levels by even 30-centimeters. ... which is about one quarter percent, or one part in FOUR hundred of the total ice age sea-level change.

Now while a 30-centimeter fall in sea levels will almost certainly not make much of a difference

in the seafloor spreading rate, it will trigger more volcanos.

This especially considering how we are talking about tipping points and lateral water penetration distances for the world's almost flat continental shelf.

This is because each meter that sea levels fall translates into a 435 meter pull-back of the oceans on average for ALL of the world's volcanos.

And while this will probably have no affect on over 98% of all volcanoes, It's not hard to imagine that this may lead to a total de-watering in a couple volcanos at the edge of their water saturation zone.

So any fall in sea levels will tend to increase volcanic eruptions. And this is on top of an immediate worldwide reduction in rainwater and meltwater.

But only a global volcanic ash sedimentation survey will tell us exactly what has happened in the past, and what we can expect in the future... call this field tephrology

#### **J92 irrigation**

Now humanity should be able to eventually counteract the ice-age dryness feedback loop. This especially if we can figure out WHICH volcanos have tended to erupt first in recent ice ages... and focus our efforts where they are most needed.

And each of these volcano irrigation projects will be a massive undertaking, like digging a shipping canal or maybe 10 canals. But given enough decades and centuries for our work, we should be able to significantly delay next ice age.

Also, I imagine a world where most grid electricity is generated by geothermal or thermocline generators.

These are holes drilled in the hotter parts of the planet. Then we circulate water in these holes and thus we have an energy source that is like a nuclear reactor, but inexpensive and without **any** radiation.

And these thermocline generators will not only provide most of the world's grid electricity but they will also power the pumps that irrigate the problematic inland volcanos AND also some of the world's deserts and inland areas for agriculture

#### **J93 Rock into volcano clip**

Here someone is throwing a rock into a volcano from

the caldera's edge.

Note how sensitive volcanos are to even small disturbances.  
And just try to imagine what a high-speed artillery shell would do.

So it's not hard to imagine that we may become skilled  
at using explosive charges  
to open our volcanic soda bottles slowly"  
and bleed down gas pressures in the world's volcanos  
—  
while they are still wet and self-clogging.

#### **J94 smog photo**

If we don't take measures to keep the world's volcanos irrigated, Earth will see a much quicker end to the current 18,000-year blue phase.  
And then, as surely as winter after summer, the planet will go into another cold, dry, filthy, and **unstoppable** ice-age of around 110,000 years.

#### **J95 triple graph**

And really, all climate data sources describe this ice-age cycle without exception. Thus the real problem that humanity faces is not global warming without end. Instead it is the ice-age that **ALWAYS** happens when sea levels stop rising and delaying the planet's volcanos.

#### **J96 famine victims**

Now, in addition to irrigating the world's volcanos, mankind really should store-up many years, if not decades of food supplies while the sun actually shines.

Today's 3-month worldwide food buffer is completely inadequate for the next ice age.  
In fact, it is even inadequate for another Tambora-sized eruption,  
such as occurred in 1816.

#### **J97 bags of rice in a warehouse**

Are we all fools? Why don't we take care of our most basic need, that of food to eat? A year's buffer supply of grain costs only about \$100 per person.

This is an insurance policy that only costs only 1% of world GDP.  
And we can still eat the grain.  
Or we can give it to the poor,  
or feed it to livestock as it expires.

#### **J98 hunting in cars**

You know, looking at the planet's volcanic ash record, the world **WILL** eventually suffer another global volcano famine.

But things have changed,  
and now mankind has vehicles to comb the planet in a quest for food and survival.  
Thus we may destroy many species

at their time of greatest weakness,  
at the dawn of an ice age.

#### **J99 population graph**

And finally, I want to say that 7-billion people will build irrigation to Earth's volcanos 7 times faster than 1-billion.

But in a global iceage famine, it makes little difference whether we are 7-billion or 1-billion. We'll still have a horrible murderous famine and an eco-system catastrophe at the dawn of the next ice-age if we only have 3-months food supply.

Thus the key to averting an ice-age disaster is not so much to reduce populations through dreadful methods, but to use our giant populations to irrigate the world's volcanos and to put away many years of food... as a buffer.

#### **J100 Local search: Moving-all-the-people**

And you of the Mideast  
This is the very message that the struggle of your people exists to bring about.
