

Tsunamis & volcanos

Los Angeles is from the Indian word for their tsunami dead

Oslo

Talk about living in the throat of a tsunami funnel. And the name Os•low = mouth•low, or low•mouth.

London was Londinium

Al•unda•in = L'und•in = al•unda•in = the•wave•in. So London was the place where the wave came inland. Nobody wanted this and the parasite came in and claimed for nothing as normal.

Hamburg = an•burg = new•city

What happened to old•berg?

Lisbon = lyse•bon = washed•well

Har•lem

It's from the Dutch words haar=high + lem=silt.

Hole•land and the Never-never lands

Holland is the land in the hole, also known as the Never-Never-lands.

Copenhagen

This is a city built in what is essentially a dry river bed that gets flash floods every so many centuries.

Don't build houses upon the sand

As opposed to the soil.

Do not live where sea coconuts grow. It means tsunami.

Unda•china

It isn't Indo•china, but Unda•China = Wave•China, the parts of Asia in the ring of fire that are vulnerable huge tsunamis.

A funnel in a funnel the speed of the wave coming up the Thames

In London, the funnel in a funnel, it is the speed of the water coming up the Thames that is deadly.

Manila

Talk about living in the jaws of death

Jaws #1: If there is a subduction along the China coastline between Hainan and even Taiwan, there is about 300km of wave front that gets sent over the Manila plane.

Jaws #2: This is the Lucena Tsunami scoop. It funnels waves coming from the south.

Jaws #3: This is the Manila Bay scoop and it funnels the tsunamis that come from the Philippines being pushed to the west.

Jaws #4: Pinatubo volcano to the north.

Jaws #5: Taal volcano to the south.

Also, it is worth noting the erosion of the Natib and Mariveles volcanos

Kalliningrad Oblast

Here is an odd bit of Russian territory, by the sea between Poland and Lithuania. The shape of the territory looks like another tsunami wash area, another Bangladesh, another Djibouti, another Beijing/Tianjin. Also look at the shape of the sand bar islands. The city is of course at the end of a tsunami funnel.

Taiwan & Fujian

Let's say a tsunami arrives from the south of the funnel at an angle like when a clock hand reads 1:00. How much is the compression through the Taiwan straight? To me it looks like it might be 10-15 fold. And this water is not coming in, it is flowing past like we saw with those river valleys in the Sendai Tsunami. That is what the Taiwan straight will look like.

The low cities

The honey-pot cities

New York, London, Amsterdam, Hamburg, Mumbai, Bangkok, San Francisco, Seattle and Los Angeles draw in so many good people and settled them in the jaws of death.

Japan, Taiwan, Philippines & Indochina

Also, you guys are living on the distal end of an ocean plate. It is your land that does the moving and the stopping. The continental plate does the energy absorbing. So you will probably have to put your buildings on slip-box foundations.

Mt Fuji, Japan

1/ The lakes to the north of Mt. Fuji are volcanic. They are from evaporated sea water.

2/ The area is silted up with both volcanic ash mostly and also maybe a bit of tsunami flows. Both are soft and easily dug-up/ dredged to let the ocean water flow in as easily as possible and irrigate the volcano.

4/ Perhaps we use hydrothermal power or nuclear reactors to pump water to the volcano area.

5/ It is tempting to divert the Fuji river, but this is a bad idea because the water will stop in a climate crisis, right when we need it. However, for now, perhaps we fill these lakes with fresh water runoff from the Fuji river with a backup system to do this with seawater if the fresh water stops.

6/ Lake Ashi seems to be an older caldera of the Mt. Fuji volcano.

7/ Due to the nearby population, this is probably one of the later volcanos for explosive de-gassing.

Japan's awfully humid summers

If you move to the hills, at say 1,000m up, not only are you safe from tsunamis, but it is 6.6°C cooler and breezier (breezy like Hawaii) year round.

Kaiju

These are the giant monsters of Japanese film that emerge from the ocean and destroy entire cities, like Godzilla. They seem to be a tsunami blid.

Neptune

Nay•ex•peh•Tu•nay = No•out•say•you•no

Neptune really means don't ever say a thing about this subject. And Neptune was the god of tsunamis and earthquakes.

Singapore

1/ Banda Ache to Ranong is quite a big funnel mouth.

2/ If Sumatra should suddenly jump closer to Malaya, the water would squirt out the ends.

3/ A tsunami from the Indo sea would wash through the Singapore straight. Indeed this tsunami flow is what eroded the Singapore Strait.

4/ The erosion of the tsunamis from the Java sea side is also evident satellite imagery.

Kuta/ Denpasar/ Benoa

This is clearly a land feature shaped by tsunami action. Is it from the waves washing obliquely down shore of Java, or are the waves from the Australia side?

Santa Barbera on a topo map

- 1/ It is a tsunami funnel where nobody should be living.
- 2/ It is almost certainly a huge oil field.
- 3/ Look at how America built its precious rich districts over its oil fields.

Sorry if I omitted you

There are many other places that are tsunami death traps. I keep finding new ones.

Redline areas

When we remake the world, let's not allow any communities in dangerous places like downtown San Diego, or too close to a phoenix forest that burns to the ground every 500 years (or so) and then comes back fastest. Let's not allow people to live in any tornado alleys unless they take precautions. And the same with tsunami zones and survival bells.

<Chicago topo map>

Chicago

The city corresponds to exactly where we would expect the tsunami from a continental leap to wash to. It also looks well washed, like another Bangladesh, another Djibouti, another Beijing/Tianjin.

Kerala and Tamil Nadu

Look at a topo map of south India and look at how the rocky hills at the tip of India have been clearly eroded by the ocean. I bet it is a combination of higher sea levels and tsunamis. Then again, looking at the borders of these states, it sort of looks like these are resettled places like with Bangladesh and Beijing.

Southeast Asia

- 1/ If we look at a topo map, there is the Thai basin, most of Cambodia, and the southern sand bar areas of Vietnam. People should not be living in any of these places less than 20m or 30m, or even 50m up above sea level. The global cymology study will tell us all how high is safe.
- 2/ Cambodia looks like it was re-settled after a flood, like Bangladesh.
- 3/ Lots of people will live on one side of the Arakan mountains or the other.

Gwadar

- 1/ There are big oil fields here
- 2/ The up and coming coming Pakistan/ China trade hub is in a place that gets wiped out by a tsunami every few centuries. What a brain-dead stupid place this is to have a city.

Abu Dhabi

When the tsunami water flows back from Iraq and the north end of the Persian Gulf, it sweeps along the

coastline where Dubai is. The channel cut by the tsunami flows is plainly visible in satellite photos.

The frequency of Iraq floods

During warm ages, how much more common are Sumerian floods? The two that I know of suggest ~2k years. Is this ~2k years or ~20k years during an ice age. Core drilling will tell us this and if the tsunamis are bigger or more frequent during warm ages.

Deeper oceans = more pressure = more heat exchange

The African rift

The African rift seems to be made up of:

Lake Malawi
Lake Tanganyika
Lake Kivu
Lake Edward
Lake Albert
Lake Victoria
Lake Turkana
Lake Abaya
Lake Lagano
Lake Ziway
Lake Koka
Lake Tana
The Red Sea
and also perhaps:
Lake Kariba

The Red Sea rift

The African rift lakes and valleys

- 1/The material inside the rift and its thickness should be studied to see how much water can be moved laterally down the rift.
- 2/ Lets view the Red Sea zone as an earlier phase in continental joining and Lake Tanganyika as a later phase.
- 3/ The water movement though the closed portion of the rift south of Lake Tanganyika should also be studied carefully.

The Red Sea shows us how rifts close

Go to google satellite view and ponder how the rift is filled with the washed-in garbage of repeated tsunamis. This is how rifts close. The garbage washes into the rift and thus it remains porous. This porous garbage supports an underground saltwater river. This is what is happening with Lake Malawi and Lake Tanganyika. There is this underground salt water river flowing though the rift. The salt water is being evaporated by the rift causing great lakes in what previously looked a great deal like the Red Sea.

Rift closure earthquakes

The tsunamis seem to be particularly destructive. But are the earthquakes worse as well? Our cymology and salt strata analysis will tell us.

Desert tsunamis

Wherever we have salt water bodies in deserts we have an ideal place to study historical continental movements.

Here are some examples

- 1/ The Red Sea coastlines
- 2/ The Libyan tsunami funnel
- 3/ The dead sea
- 4/ The great salt lake
- 5/ The Caspian sea
- 6/ The Australian desert
- 7/ The Namibian desert
- 8/ The Persian gulf

Karumba and Normanton Australia

At Normanton there is clear tsunami erosion going maybe 35km inland. Is this just recent? How big a tsunami does this imply? How big a quake?

Trinidad

The area around the Caroni Bird sanctuary looks like an oil field

Is San Diego from "de golo"

Maybe the Portuguese came and asked the Indians the name of the natural port. Then the Indians made a hand across the neck gesture, and the Portuguese took this for de-golo or de-capitation.

Is Point Loma from Gr. Oma = problem/ disease?

Maybe it is Pt. Oma because of the way it scoops tsunami flows. So it is the source of the problem with San Diego.

Mt. Soledad = Sol-idea = Only-idea

This is the coastal hill in San Diego everyone thinks of running to, the high ground. Also, it probably was oral tradition #1 among the Indians that you should be careful of getting too far from high ground. The location of the first Spanish mission (San Diego de Alcalá) mission, was therefore atop the bluff, the only place the Indians would go. Then after some time, the mission probably burnt to the ground or some-such and then it was rebuilt half way down the hill.

The real golden triangle

Does the San Diego river bear gold? If so, then we have this situation where the gold flows downstream, and every so often there would be a giant tsunami that would remove the lighter material and leave the accumulated gold behind. So the Old Town/ Bay-ho/Sports arena area looks like San Diego's real "golden triangle" and "golden hill".

Silver lake

Maybe we will find this somewhere east and north east of downtown Los Angeles. We should at least look.

43m

This is the elevation of Yuma at the end of Bahia California = Baja California Bay, an immense tsunami funnel.

The accuracy of the cymology survey

I bet the accuracy and resolution of our knowledge of past tsunami run-ups will very soon exceeds our current earthquake measures. Also, all coasts and all inlets should be monitored worldwide so we can more accurately correlate past tsunami run-ups to past tsunamis and past earthquakes.

Drilling alluvial shorelines & long term tsunami history

The soils of the Persian Gulf come from giant, but infrequent tsunamis. And there are many gulfs like this around the world. If we core drill a few spots deeply, we will be able to see how often and how powerful, and when these waves have been. We will also gain an important window into comparing climate with tsunami frequency. This will allow us to estimate how much the seafloor spreading rate shuts down during ice ages.

Lots and lots of holes

- 1/ First we are going to drill holes every 200km. Then every 100km. Then in some areas perhaps every 2km.
- 2/ We are going to be drilling the planet's surface for decades and also surveying its mineral resources.
- 3/ This will give us an accurate picture of the world's mineral resources, and how long the supply will last at current levels. Then we will be able to make informed decisions about the future of mankind.
- 4/ We will no longer be subject to the MINers who seek to MINimize our MINerals.
- 5/ Some places will not need the exploratory hole density of other places.

The core drilling will also give us a means to estimate world oil supplies. What percentage of the alluvial soil core samples are petroleum?

What is the volume of the Persian gulf alluvial soil area?

Cymology from tree-falls

I bet we can find thick soil layers indicating earthquake tree-falls in say Japan and Taiwan. These would match with massive tsunamis. These would indicate that these islands leap. And probably all of Asia's islands and Australia leap.

<https://www.youtube.com/watch?v=j3n40L1CaBU>

See the rocks? They are what remains when all the tsunami sand washes away.

Mycenaean Greece

Mycenaean Greece was based in the Peloponnesian peninsula, a semi-island of 21,550 sq. km. with a 6.4km wide causeway connecting it to the mainland. Thus the tube-island (pen-insula) was accessible via land yet quite defensible due to the ability of the residents to concentrate their energies along a 6.4km fighting front.

But the Peloponnesian peninsula is a place of tsunami funnels. In fact there are 4 funnels/tubes:

- 1/ Messina = Messini=mouth•ini / Kalamata = kala•mata =evergreen•death, a term still blidde today by the world's tastiest olives.
- 2/ Sparta/ Laconica = lack•o•nike = lack•of•victory,
- 3/ Argos = our•go
- 4/ Corinth = core•in•eth

Now the curious thing is that after the **Mycenaean** tsunami and Bronze age collapse due to amphibious attacks on the survivors, lack•of•nica civilization recovered inland and uphill at Sparta, a central place where the survivors seem to have regrouped.

<<<Peloponnesian league map>>>

Atlantic civilization on a map

In another section, I characterize Atlantis as a seaboard. This mentality is shown very well in this map of the Athenian empire c. 431BC. Note the Athenian seaboard area shown in yellow. This was how far the Athenian navy and marines could project power inland. It was also probably a matter of accessibility and trade. These coastal areas were all that really mattered. The inland areas were just too inaccessible in a world without roads.

1/ The Atlantic civilization was out, past the pillars of Hercules. It was the entire "outer ocean", the entire Atlantic/ Atlantis ocean that was Atlantis. This entire seaboard suffered from at least one great tsunami that mostly destroyed it, with the black bird/black beard pirates finishing everyone off.

2/ Note how Athens controlled the grain coming from Ukraine and feeding Mediterranean civilization. Also note that both before and after this time Persia controlled this sphinx. So Persia gained a great deal from the demise of Athens. Early on, in Mycenaean times, it seems that someone sabotaged the Athenians by founding cities at the throats of a tsunami funnels.

The worthless strip of California

That piece of land on the Pacific Plate. That piece of land that runs from the "Golden Gate" and Cabo San Lucas. That is Cali•for•nia, meaning good•for•nothing.

How California got its name

Firstly, you are in Mexico contemplating a trip up the coast to the north. So you ask about the shore and people tell you about the Kali•for•nia=good•for•nothing land in between. In particular they warn you about the trap that is the Bahia of kali•for•nia. This is a long bay that leads to nothing but worthless desert. Y mas alta... there is an alta part that is sort of OK. You can find provisions there, but it is not worth farming. Maybe ranching, but there isn't enough rain for farming. That is the Alta Cali•pher•nia (green•bears•not) zone. Then there is the ore•gon land, the land of golden•offspring.

Bahia Cali•fer•nia = the bay of good for nothing

It was a place of legend. This giant worthless bay.

San Diego & Los Angeles

These are definitely in the baja, or bahia part of California, a worthless desert in a zone that also suffers from particularly nasty earthquakes. In Alta California at least they had more water.

The California Coastal Commission

Look at how this body protects and sanctifies all the places that will get wiped out in the next giant tsunami.

Chrystals are igneous

I think they crystalize from a gas.

Granite and earthquake fault lines

Is granite a thing of fault-line convergence zones? Do the crystals build up from the hot mineral rich gas/ condensate that melts the earthquake faults and causes the next earthquake. Then the heat and pressure seems to refuse the crystals.

1/ Are the convergent plate boundaries around the oceans the main source of all the sands of the seas.

2/ Is decomposed granite the material of earthquake faults? Is this the material which is ref we need to conceive of

3/ The temperatures that granite forms at are quite particular. They are high enough so that the grains not only soften, but also fuse into a styrofoam-form rock that is never re-melted, although it sometimes doesn't form properly. A good example of malformed granite as the Hollywood hills where it is wrongly called "decomposed" granite. Apparently, this granite in the Hollywood Hills wasn't underground long enough, due to the fast seismic activity of the area.

4/ The granular nature of the material is environment where the fault line is melting and causing the earthquake.

Australasia construction

every new structure in this region should probably

- 1/ Have slip foundations
- 2/ Be up above a rather high tsunami line.
- 3/ Be designed for extreme earthquake loads.

The kraken = the cracking

Krakatoa is the kraken. The cracking is a reference to the way the mountains ranges between Sumatra and Java are at different angles and how the bend is right at Krakatoa. So the gigantic Kraken in Homer is fake, to cover up Cracken•to•a, a very active volcano.

CO2 and seafloor rift temperature

Lower sawhorse A-frames over locations on the seafloor rift. These each have multiple booms with super sensitive thermometers. What is happening to temperature here? Is it rising? What is happening to CO2 levels in the water in the rift? Is this increasing faster than atmospheric CO2? How can can CO2 and temperature levels be rising faster here if the rift is not the causal variable?

Subduction

Earthquake mechanics

Recall how subducting continental plates freeze on contact like a tongue touched to a frozen metal thing... like a spoon kept in the freezer. Now it is actually the spoon part that is subducting. And this is constantly being shoved and fed further and further into the hot molten center of the planet. And as it does so, hot gas escapes and helps heat the cold lithosphere, the spoon part so it is no longer frozen solid. Instead it melts enough at its edges that it is no longer frozen.

It seems a little more complicated than this. It seems there is a second step/stage in this process. It seems that like at the seafloor rift, the gas is just a channel creator, and the convection of super hot fluid magma though the channel is causing most of the heat release.

So the gas comes up periodically along the fault — Like it does with strings of volcanos. However, without the ash plugs, the gas does not need so much pressure. So there are more gas exit points along the fault.

Here I imagine subduction volcano gas released from point holes forming every 1-to-5 km. And there are no pressurizing wet ash plugs. So the same gas that would cause a volcano to explode instead dribbles out without accumulating much pressure. So the gas comes out slowly and constantly, and all the heat is imparted to a two dimensional rift. The effect is at first a pin hole. But once the heat starts convecting in the rift, the pin holes start to become triangular, with a broad base where there is the most convection and narrow at the top where there is the least convection. Then the triangles of melted rift

start overlapping and eventually melt the rift sufficiently that grab falls below horizontal rift force. When this happens, the subducting plate breaks free and there is another subduction earthquake.

How deep does the subducting lithosphere's tongue freezing occur? Probably where the thawing occurs, namely at the depth of most earthquakes.

Subduction earthquake monitoring

These underwater devices are less extreme than the ones at the seafloor rift, and they have continuous readings. I bet there is a sudden spike in CO2 levels just before a subduction. I bet this will give us a way to predict subduction earthquakes by hours or perhaps months. It is like with volcanos, once the gas starts flowing, the flow creates more flow. Subduction earthquakes are probably similar.

How deep does the outgassing occur

What is the deepest and the highest pressure outgassing we can find on Earth? What is the shallowest and lowest pressure outgassing we can find on Earth? We should know this to get a better picture of how highly pressurized our planet is sub-lithosphere. We should also survey the entire seafloor rift system for depth and temperature: say 4,000 depth readings, one for every 20-km. What is the depth distribution for the seafloor rift? Does the rift never really get deeper/shallower than say 2.X-km?

If there is a depth limit to the rift, then we are probably seeing the pressure of the ocean equalizing with the pressure gradient of the gas trapped within our planet. The gas can't escape where the ocean is too deep and back-pressure too high. Also, at the same time, the rift can't be too shallow or the rock is not soft enough to permit outgassing. That is how we explain a seafloor rift that exists only in a certain depth range. Also, maybe the surface elevation of the seafloor rift varies, but the actual spreading occurring at a constant elevation range.

<<< Himalayan plateau topo>>>>

Do the Himalayas show us how thick the ocean lithosphere is?

- 1/ There definitely appears to be a continental shelf on the edge — especially on the dryer north side. On rain soaked south side there is much more rain erosion.
- 2/ There are quite a number of salt lakes and salty places atop the Himalaya.
- 3/ Perhaps the Indian plate pushed under the Himalayas early in Earth's history, and that is why the lithosphere is so thin here. Also the Early formation and long life is more consistent with the severe erosion we see at the edges of the Himalayas.
- 4/ Is or was this the thickness of the continental lithosphere? From here, the lithosphere doesn't look very thick. Perhaps the same people making those

exaggerated cutaways depicting Earth's lithosphere as hundreds of miles thick are also making more sophisticated "serious" estimates of 30 and 150 kilometers in thickness. From here it all looks like a huge exaggeration, considering the scant height of the Himalayan plateau lithosphere only 4-5km thick.

Macro glacier channels & Pangea

- 1/ Glacier valleys definitely have a look on a coastline profile.
- 2/ These valleys get more common and bigger the further from the equator we get and at higher altitudes. So glacial valleys seem to grow over time, especially where it is colder.
- 3/ There are these large channels that look just like giant glacial valleys in north Greenland, Ellesmere island, Svalbard island, Iceland, Antarctica, Iliamna lake in Alaska, and near the southern tip of Argentina. In Argentina these giant glacial valleys are where the southern Andes were glommed on later after these glacial valleys formed.
- 4/ The locations for all these make perfect sense given today's earth. They do not however fit with a Pangea/ Pan-geo/ Pan-gaia world with all the continents in a big mass.

Earthquake rescue equipment

In earthquake country I would have government distribute the following equipment

- 1) Regular Hi-lift-jack
- 2) 4" diameter heavy tube digging and pry bars, (2-man to carry) maybe 12' long (1:20-pax)
- 3) HD extra-hi-lift jacks able to lift maybe 75-kips. (1:100-pax)
- 4) Gasoline powered diamond saws (1:1,000-pax)
- 5) Bullhorns (1:100-pax)
- 6) Microphones for inserting into rubble (1:100-pax)

Continental leaps

These are not earthquakes, or shockwaves oscillating through a stationary landmass. This is the landmass moving, or leaping at earthquake speed. Imagine the world and everything attached to it leaping 20-meters sideways at 400kph.

Building for Continental leaps

We know exactly which way the vector is. If all the buildings have a gentle slope in that direction, then they all come loose and fall maybe from knee or waste height in a leap. After the leap, there is only the drop.

<Athenian empire map>>>

Lost continents

This seems to be a reference to lost seaboards, and continents seem to equal containers, or containment shores.

Yan Jing = Tian Jin + Bei Jing

Yan Jing was the old name before the two provinces were split. So there was once this province that looks just like a tsunami wash area, like Bangladesh and Djibouti.

Yan Jing can mean "eye", perhaps eye of a tsunami funnel. It can also mean mountain path, the exact opposite of what the place actually is. It can also mean eyeglasses, as in "put on your glasses dear bro, you read incorrectly". Also, let's look at the separate meanings of Yan and Jing:

Yan: To flood/ to submerge/ to drown/ inundate/ to bury/ submerged/ to cover up/ obscured/ surprise/ to make waves

To carry on, to follow a tradition, to preserve an idea, to extend...

Jing: sacred book/ scripture/ classic/ traditional knowledge/ old legends/ fine writing paper...

to pass through/ to flow through/ to endure/ to bear/ to undergo...

to be frightened, to be scared, alarm, to startle...

lens/ mirror (does this also include focus, funnel?)...

neck/ throat...

spasm...

struggle/ contend/ compete/ to be fearful/ apprehensive...

It should also be noted that Jing has a great many meanings, too many meanings and this seems to be a word that had a problematic set of meanings, so more were added.

But getting back to the main point, Yan Jing seems to have been interpreted as many things like traditional flood records, or submerged forbidden zone.

What caldera lakes indicate

What is going on underground here? Remember the wet ash plugs that dry out and cause eruptions? A large amount of water is being evaporated here and this is the source of the steam that causes the caldera lakes.

Its the ash not the lava

The ash in the sky is the problem, not the lava.

Volcanic ash and pulmonary disease

In the same way that we're all scrambling to learn things about the coronavirus, one day we're going to all be scrambling to learn about the effects of volcanic ash, and treatment for a volcanic ash inhalation.

Volcano tourism

Let people get a good visceral feeling for the power of Vulcan if they want. Volcano tourism is a good thing. I mean, maybe everyone should visit one volcano, So that we all have a really firm visceral grasp of the scale of

these monsters. Also, all of these tourist volcanos should have CO₂ and temperature sensors all around. And they should have bunkers for flying debris, if that is ever a problem.

The scale of volcanoes

I would make this a mandatory academic module for all kids. Every year, they see a "scale the volcanoes" module for say 20 minutes. They explore the size of the volcanoes and how big the recent eruptions were and how far the ash went.

Are amethyst logs from volcanic bubbles?

Is this what volcanic bubbles look like? Or maybe they are also like geodes. They come up and cool very slowly, enough time for the material to slowly crystalize under slowly declining temperatures. They cool faster on the outside and don't have time to crystalize. While on the inside there is time to crystalize. Also, they are sort of the size of columnar basalt columns.

Volcanism on the moon of Europa

Either there is a volcano, or a rift. The plumes are from hot gas boiling the water/ice which sprays out to the surface.

Everyday is cold dry and overcast

That is what a volcanic ice age is like. But blade runner is an exaggeration. Imagine the strength of the sun on a clear day in late December. Now imagine the sun in June. Now imagine the same thing but with overcast.

Let's get ahead of the ice age drought

We're going to have a pretty good idea which place will stay wet during ice ages. We really should have a backbone aqueduct system in place to capture this over abundance and send it to other places where it is needed. The distribution of this water will be perhaps the most critical, the most limiting resource at the dawn of the next Ice Age.

Global warming: 1.8% hotter

Absolute zero is -273.15°C, and the average temperature of the planet is 14.6°C. And during an Ice Age, the planet is overall perhaps 5° cooler. But compared to absolute zero, the difference is about 1.8%.

Global warming in perspective

The average temperature on earth is 12.7°C. The average temperature at the North Pole is -40°C. Absolute zero is -273.15°C. So The North Pole is 233°K, and the average temperature of Earth is 286°K, a difference of 53°. During an ice age, the average temperature might be 5° cooler. That is what an ice ages is. And the effects are mostly outside the tropics.

<https://blogs.scientificamerican.com/life-unbounded/the-crazy-scale-of-human-carbon-emission/6-years>.

"Deconstructing Global Warming" Lindzen 11:15-14:25
Richard Lindzen & problems with the CO₂ theory

1/6th sunlight, 5/6ths heat leakage

The difference between Earth's average temperature and its arctic winter average is about 15% of the way to the absolute zero and the temperature of sunless space. We should realize that we are on the long tail of solar energy — because the sun only provides 15% of our planet's heat.

Modeling the ice energy

How big were the ice caps during the last ice age? How much energy is needed to in freeze/ thaw that amount of ice? How many years is this spread out over? That is how much energy is being released by the seafloor rift and how much of the sun's energy is being shaded.

Paleo soils history for each region

We should really figure out when during the Ice age cycle South America dries out. When do all regions of the world dry out and not build soil?

Volcanic winter + food crisis + mass extinction + pandemic

The volcanos may cause a worldwide food crisis where people with cars and gas can enter every ecosystem eating pangolins and bats, etc. Thus it also become more likely that mankind suffers plague(s) as well.

The volcano storyline

There should be a timeline of planetary climate during and after the last ice age put together. There are multiple lines for Equatorial, middle latitude, and and polar temperatures, CO₂, argon, sea levels, and volcanos. Much will be learned just going though this a couple times.

Stockpiling

We need to have slow stockpiling. This is so we don't cause the world's poor to go hungry.

How much is one part per million

Let's say you weigh 83kg. A millionth of that is 83 milligrams, 1/12 of a gram.

Northwest Africa

We hear about North Africa being lush 7,000 years ago. Let's look at the soils. Does North Africa get more rain during ice ages?

The ears of the Red Sea

They were probably cut by tsunami flows.

We should try making petroleum

Let's get about 10 truckloads of harvested seaweed from the beaches of southern California. Then let's truck this stuff inland to the desert and put it all in a broad pit that is maybe 1m thick. How long does it take to become petroleum? Once we prove the concept we can experiment with different conditions to see which is the best for forming petro oleum or petroleum.

The odd age distribution of Earth rocks

Earth rocks do not follow a smooth age distribution continuum. Instead, nearly all of the rock is less than 1 billion years old. While only a tiny fraction is older than this, and up to 4 billion years old.

This leads us to ask if the oldest rocks from both the Earth and its moon might have come from somewhere else. Or perhaps they are lumps from before the bang.

Rock older than 1 billion years

It is notable that there is little rock on Earth that is older than a billion years. The consensus explanation is that Earth's surface is constantly being recycled. However, nowhere do we find substantial amounts of continental lithosphere in the process of being subducted and reabsorbed.

It is generally only sea floor lithosphere that is reabsorbed. The continents seem to only build and grow like soap foam. We therefore might want to be careful dating the planet by a few very old rock formations, as these may be extraterrestrial lumps.

Is the sial extra-terrestrial?

Is sial coming up anywhere? Maybe the sial and most of the water are extra terrestrial in origin.

Sunlight is 62% blue and 38% red

The reason why sunlight looks white probably has more to do with our evolution than the amount of red light balancing-out the sun's peak blue green light. And animals probably adapted to be more sensitive to red light than green light long ago.

The scale of life on planets

First it is microscopic. Then it becomes as big as a Sauropod or a giant sequoia. Then it gets smaller and smaller until only insects remain, and then finally only single cell life remains. So the scale of life is sort of a bell-curve if the planet lives that long.

The rains that feed the oceans

Just as rain gives life to the land. It does the same for the seas... but in a different way and due to the nutrients

washed away. Also we realize that soil erosion is what feeds the rivers and the oceans. And this is something always going on.

Ocean richness

The coastal areas near river out-falls are the richest. This is where the oceans are also fed on the land's runoff bio energy. It is rather obvious, but still everyone should know this.

How big is the environment?

There are 5 people per cubic kilometer of water. Are we really warming that much water?

The Kobayashi maru for ecology

Who is to say that we are not part of the simulation?

2001 moments

- 1/ When that first chimp developed this instinct to carry a stick.
- 2/ When the first human was smart enough to realize that circling birds means food.
- 3/ When the first human was smart enough to start cleaning and wearing skins.
- 4/ When the first human was smart enough to start stringing skins.

The stick carrying made us predators

We were probably much like chimps & bonobos when the stick carrying started — occasional hunters. But the introduction of sticks changed all that. Suddenly there was much more meat to be had if you had the stick carrying gene. And after these guys were fed, they started killing animals to trade for sex. This is where the female dependency started. It is also where the sex-exchange instinct comes from. It is also where the continued killing of animals instinct comes from. And all these things were great survival strategies on both sides. But the stick carrying made us predators, it pushed us much more into meat consumption.

How effective sticks were at first

Imagine a mature chimp, but significantly upgraded with the coordination and ability of a 22 month old human with respect to stick carrying. Watch the kid pick up some random stick that is probably too long or too short or too flimsy. That is how stick carrying started in fights among male chimps who already throw and flail objects. First these fought among themselves. Then when they could, they started going in troupes, sticks-in-hand to drive lions off their prey. Humans are why today lions all hunt in groups.

Afros and TBIs

When afro hair evolved, the stick abilities might have progressed only to those of a human 4-year olds in a strong chimp body, and with a chimp's temperament. And

nobody ever taught them how to swing or which stick to use. So they missed or were rather ineffective a great deal. So they mostly didn't hit their target very hard. So afros and head hair evolved to protect from this sort of glancing blow, to take the blow speed down by 10%-25% and kinetic energy by half. Therefore, much less kinetic energy reaches the skull. And this is such an easy thing for people to study with human hair wigs and accelerometers.

The evolution of human hunting

- 1/ First proto human apes drove predators off their prey.
- 2/ Then the proto humans used dogs and clubs on prey.
- 3/ Then they proto-humans used sharpened sticks and stone blades to slash the neck of animals. Like what modern wild hog hunters do today.
- 4/ Then mud covered stink-free men wearing animals skins would walk near their prey. These were carrying stone blades on sticks so they don't have to get right next to their prey.

Wearing animal skins probably predated fire

Think of the proto-humans that spread into places with cold winters. What a physical joy the first fire was. A fire to warm cold hands and feet, and shivering bodies of those coldest longest nights. So not only was fire a joy, but hardly any tribe died from eating meat infected with rabies, plague, ebola, etc. when it was cooked. And you tribe could go where it was colder because of your fire skills.

How shoes evolved

At first they would skin the legs off of hooved animals in tubes and put these on their feet. Later they might tie or put a stitch in the toes and ankle. Also, in cold climates people had to be much more careful about getting their feet wet.

The evolution of clothing and bare skin

The hair is still with us in many people. It was one of the last things to go. First they started wearing shoes and then skins. Then the hair was no longer needed really.

How we changed

The Australian Aborigines are the descendants of the vanguard of the state of the art in human evolution 50,000-years ago. They are a valuable data point.

Meat eaters

It was our carnivore aspects, Our violent stick carrying aspects that propelled us from the distinctly animal reality of individual chimps into the demigod of modern mankind. Are we to turn our backs on this past simply because some people feel that animals deserve human rights. I don't believe that animals deserve human rights, particularly the domesticated animals, bread to be brainless and food energy efficient.

Man eating lions

Lions should have developed a taste for the humans driving them from their prey.

Fire

You can say what you want about fire, but to me its main gift was protection from all the many predator diseases. Fire fascination and fire management are instinctual in our species. I bet fire management drove immense advancement in our minds.

Hunting pigs with dogs

If you are into anthropology, you should watch this. Does this happen before or after the arrows? Were the arrows more to protect against men than to hunt animals?

Can Chimps count?

Put 2 bananas in a high bucket on a string that a man can reach, but the chimp cannot. Take out one then the other banana and eat it. Does the chimp still drag the platform to go for a look?

Forestry & Irrigation

Irrigation and desert agriculture

UM rail and hydro

When the UM makes wasteland blooming and valuable, that land shall belong to the UM, and the UM shall lease that land on relatively short periods with reasonable ecology and soil sustainability rules. Also, the females living in UM lands must all obey the reproduction rules.

The problem with recycling human water

We sweat salt and we excrete salt in our urine and this builds up in the soil. The solution is two fold: On one hand we segregate our waste water for salt, This is so we don't use our saltiest waste water on plants. On the other hand, we use systems that hold excess rain in the wet season to wash the salt from the soil. So we might have trees in places that go more than a year without rain, because the rain is only used to flush the salt out, and one 2-day storm might be good for 4 wash-outs.

Properly washing the salt out

We have this plug of soil that is maybe a couple meters across and 1 or 1.5m deep. And this is on top of maybe 1m of porous gravel for holding on to water. During the occasional desert rainstorm deluge, the shaped terrain runoff fills the pots fill up to the gills. Then we let them sit for a couple hours, so the salinity equalizes. Then we pump them out and wash the salt out. Then we fill the pot up again and repeat the process. It is also important to realize that the soil we are using will be conditioned, sifted local soil that is perhaps 50/50 mixed with quality

soil and hydrophilic polymer strands, or maybe there are layers of mini perforated pipe running through the soil to help with osmosis.

I'm looking at a baby swimming pool that I think cost \$7 at a Target shop. What if these are 1.5m in diameter and maybe 2m or 2.5m deep... or bigger for bigger trees... like giant buried pots that "never" get moved. Gravel goes in the bottom with a pump tube to the pointed bottom. This is so the water can be pumped out before a storm. And also so stagnant water can be removed/treated.

3-drain recycling systems

1/ There are three drains, feces, urine/salt, and re-use as irrigation.

2/ Most of the water by volume will be the re-use as irrigation water.

3/ The feces get combined with a measured amount of urine and local soil to create topsoil that will be quarantined for some years before it is re-used in way that will permit salt de-leaching.

4/ Most of the urine water will be disposed of as waste.

5/ The first show rinse, the urine, and salty soaps go in the salt drain. people are supposed to rinse off using the salt drain/basin and then once their skin is rinsed off, they use a valve and switch to the salt-free recycling drain.

Salt pollution of the soil

People can talk all they want about all the various ways we humans supposedly pollute the environment. I bet salt pollution from irrigation is 100 to 1,000 times worse (in terms of spoiled lands and sustainability) than all the other pollutants combined. We should only allow irrigation where there is a means of keeping the salt from building up

Plastic cistern desert agriculture

Let's say that the plastic blow form pots that are made locally and cost \$10/ pot delivered. And these are waterproof when properly installed. And these are at the center of an earthen circle covered in plastic, a sort of shower-pan form that is covered in plastic and drains to the bowl. So if the pot is 1.76 square meters in aream and 2 meters deep. And if the drain pan is 5m in diameter that is 78m, that is a multiplier of 44x. So a 3-cm rainfall fills the cistern up completely. Or maybe there are pipes to each pot from a wadi. Or maybe all the pans are shingled so a single pipe outfall fills all the pans, each with the overflow from the previous pan, with nothing more than gravity propelled diverted rainwater runoff washing the salt out.

But let's say that these pots are at 10m on center. That is 100x100 for 1km square. $10,000 \times \$10 = \$100k/$ square kilometer or \$404/acre. And maybe where rich soil is available, we fill these little water-tight "hair transplant" plugs with rich soil from a nearby location.

These will be good for growing vine crops like peas This is because the water from a large area can be all gathered and then preserved and then dispensed in a more optimal rationing for the growth of crops. And we might have several times more plastic pan area than crop area, but we we have some crop area and fresh local food where before there was none. And all this for little more than the cost of plastic sheeting and waterproof plastic cisterns

Isolated desert farming

1/ The holes for the plastic growing cisterns are drilled with tractors. The tractors also spin a n angled hole with a standard drill bit point angle. Then the plastic pot cylinder is put in. Then goes a layer of sand and gravel, and then top soil.

2/ There will be replaceable plastic covers to help reduce evaporation. There will also perhaps be wind ears feeding air into the perforated pumping tube and helping to help the roots to respire.

3/ The cover has holes for the plants to grow through, and also for the water circulating pump.

4/ We probably want to hold the cistern water for months and we need an additive to keep the water fresh.

Get the salt out of the recycled water

1/ We humans eat far too much salt. The salt content of ingestibles needs government regulation due to the arms-race nature of food saltiness. The saltier tastes better. So in the deserts, let's start with a healthy salt level in our diets, so we don't excrete so much salt.

2/ let's have sodium, potassium and magnesium saliva tests so people can manage their electrolyte balance better.

3/ Apparently, 90% of human salt consumed is excreted in the urine.

4/ Perhaps we want double drains, each with its own open/close lever. Thus the salty first shower rinse water is not recycled.

5/ The desert community gardens are all put in waterproof pots or pans with water trapping berms. Frequently the water going down the wadi is pumped up to the top of the brow ditch system for the hillside plants.

Watering 8 acres at once

1/ What if we had these 200' x 1,600' steel trusses that can water 8-acres at once, 8 flat acres? These connect via fire hoses and standard sized steel connectors at their 4 corners.

2/ There are 18 centrally controlled drone pickup trucks. There are columns that slide into a vertical sleeve or shoe in the center of each truck's bed.

3/ the contraption rolls along slowly, 202 feet at a time and using men to disconnect and reconnect it each time. Or maybe it self connects. I see this in places like Kansas with long straight parallel roads. The set up requires say

202' of 24" pipe per 16 acres, and one connector every 202'. This applies 1" of water to 4 acres per 20 minutes under medium pressure including disconnect, movement and reconnect. So that is maybe 576 acres per day, or maybe the setup can theoretically water 34,500 acres (54 sq. mi) per 60 day period. A little over 1 square mile per day.

And aside from the dirt paths for the trucks, all that is needed is 12.5 feet of 24" water pipe per acre.

The truss is gossamer thin, except at the 8 box forms because the whole thing has stainless steel water arteries, and then it is plastic pipes. So the only load is the water, which is quite heavy. But there are sensors in the frame to keep it straight. And maybe the tires are thin and designed to spin more, so they don't flex the frame. And it probably isn't a bunch of trucks holding the frame up. Maybe it is giant swivel caster merged with a 200cc motorcycle engine/ Central fuel lines, central control panel for a man to use. But two men guy water a bit over one square mile per day. One man does connections for left side of the device and another for the right side. Then again, the connections will probably eventually be automated.

>>>

These pipes and the water system to feed them are the sort of solution that needs local government to implement, and should be viewed as a matter of food security. I think the arterial pipes are more of a public thing, paid by the people and set up by the people for everyone's good and paid by the national or international government. The watering frames and perhaps the pipes should be private operations, or regional cooperatives. Importantly, we should always have watering system factories constantly in production just in case we suddenly need more watering trucks and pipes due to a climate emergency. A \$1,725,000 watering rig that waters 34,500 acres is \$50/acre as a single lifetime expense for the watering 12.5 feet of 24" water pipe per acre.

8-acre tech

1/ I don't see why we can't have robots that water 8-acres per connection. And won't this tech help us if water ever gets real scarce. And maybe we will only have 1-acre robots at first. Robots that can only water 1-acre in 30-minutes. But eventually we will have 8-acre robots and maybe more

2/ Auto-connection to the connection point

The pipes have upward valve and connections every so many meters. The 8-acre watering devices press down and thread to these connections, like with a garden hose.

Crop circles

These sit idle for most of the time. Crawlers get used 24/7 when needed.

Adjustable height legs

The legs or the propulsion units can be adjusted so the crawlers can handle the sorts of foothill slopes that squeeze rain out of clouds.

Watershed reliability

Even if the Missouri river turned into another version of the Orange river in South Africa, there would still be water to use. Rivers with their large watersheds and slow runoff are much more reliable than rainfall in any one place.

Reusable irrigation equipment

Except at the aqueduct level, all the steel pipes and crawlers that water in one fringe farming location can simply be taken apart and reassembled in a new fringe farming zone if rain patterns change.

One state to the west

If we look at a rainfall map of the United States, it is clear that there's plenty of water in the east and not enough in the west. On top of this, there are many rivers flowing from the dry west to the lush east. So the water from these can be completely used up. And there is just so much water in the lush part. We even have the mighty Missouri river on the eastern side of Nebraska and on the west side of the state we definitely need more water. Likewise for Kansas, Oklahoma and especially west Texas, maybe 2/3 of Texas could use more water. And that is not counting South Dakota, Wyoming, Western Colorado, and New Mexico.

Midwest backup irrigation zone

This takes water from the wetter part of the US. It uses a number of aqueducts coming from Missouri, North Platte, Arkansas, and the upper Colorado, as well as other rivers and perhaps even the Mississippi river. Then it moves the water to the dryer parts like western Nebraska, Kansas, and Oklahoma.

Here irrigation water is only being used as a supplement in areas that are not quite rich enough for grain farming or ranching.

Why the Oklahoma panhandle exists

It's because the two rivers that are roughly under it are ideal for irrigating the surrounding dry lands. However having five states jurisdictions greatly reduces the potential for state action. It's also interesting that the confusingly named Canadian river is in this place. It's also quite confusing how there's a Colorado River running through both the heart of Texas in the heart of California Nevada Arizona territory. This is all by design because somebody doesn't want us to talk intelligently about our scarce water resources. I bet we can get a tremendous amount of food out of this area for practically nothing and all we have to do is build some canals. Also, everything north of the Red River in Texas should now be considered Oklahoma.

South Dakota, Nebraska, Kansas, Oklahoma & Texas

These states will no longer exist, so let's re-imagine their territories all continuing west until they hit the Rockies. Nobody is using this area because it doesn't get enough rain. So let's run our new macro water districts (because this is what I am talking about here, macro, multi-billion dollar water districts centered on 1,000km long aqueduct) Let's run these water districts from near Denver to the Missouri or Mississippi River if needed. And let's make them rather like a stack of pancakes. Maybe it will be North Nebraska, Middle Nebraska, South Nebraska, North Kansas, etc. giving us 5 to perhaps 18 water districts to help keep things honest and competitive. Maybe they will be rectangular, or maybe organized by watershed.

The snake river water system

We should build aqueducts and interrupt more of the water flowing from the dry interior of the US northwest to wet of the super wet Pacific Northwest. The Snake river is in just the right place for this.

<US rivers map>

US rivers renamed

The Idaho river = The Snake

The Nebraska river = the Platte

The Austin River = the Colorado river of Texas

The New Mexico river = the Rio Grande

The Oregon river = the Columbia

More farmland

The part of the US deemed suitable for farming should be helped to go as far west as possible with a good deal of built cost irrigation water made available.

Bio-energy to fuel = wasteful

We can turn our bio energy into fuel energy, but it should not be. Unless there is a crisis situation, the waste of this sort of transmutation (in either direction) is a stupid idea.

Bio treasure down the drain

I am not much of one for recycling, but the place to dispose of our toilet waste, food waste, and plant trimmings is by making them into soil that will be quarantined for a certain number years and then used for parkland or later cropland.

Soil transport

Nutritious soils accumulate to great heights in some places. In other places the soil is very thin. We should inventory world soil levels.

What sand is

It is the loose particulate matter coating on our planet's surface. But there is a special condition at work here. Sand is the particulate matter coating that has been washed of its brown and green component, its life

component. That is what sand is. It is surface without a bio component to it, mostly due to a severe lack of moisture or flood action.

Soil + runoff/spring = habitat = our world

It is all we've got — the living stuff between the sand. That and the water we can gather. The water helps us cover more of the surface of our flying orb (planet) with green life colonies that increase bioenergy.

The salt map

Can we have this world map showing salinity in "technicolors". I bet it turns something up.

Which weeds make the best grazing?

We should do research into which desert plants make the best grazing for each animal.

National water sharing networks

We should probably get these in order before an Ice Age crisis. Even in today's wet and food rich world many of these projects will have less than a 15-year payback.

Desert tree pots

This is say a 3mm blow bottle in a wadi bottom. And the bottle is not entirely water proof on one side where the tree is planted at the edge of the bottle. Here the pot is open maybe 15cm down and 40cm across. This is so the plant can have roots that are inside for water, and outside for respiration and nutrients. Then the tree is better able to take what it needs.

Desert organic

Desert farming with irrigation water tends to be more organic and free of pesticides because there are fewer bugs in the desert. This is related to why civilization arose on irrigated farms in the desert. So we come to an image of our desert farming areas as being small and widely separated. Perhaps we even farm fresh soil each year on a 5-year rotation.

Desert potatoes

1/ To my mind, we should not be growing potatoes anywhere except the desert in small lined and irrigated fields that are far from any potato plants.
2/ Pesticides last longer in the desert. They remain on the plant longer and thus can be used more sparingly.
3/ The bug-bait plants like potatoes that are typically grown with the most pesticides might be better grown in spread-out desert "grape fields" watered with irrigation water and grown in imported soil in plastic troughs.

Quarantined "oasis" farming

To me, desert farming is by nature quasi-organic. This is because if a pest manages to make it through the desert the field can be easily quarantined if not sprayed. This is

how we grow relatively organic potatoes and spinach on a large scale.

**Catchment dams are many and small,
Power generation dams are few and giant**

And the catchment dams have much more surface area relative to volume than power generation dams. They are more or less set up to temporarily buffer the fresh water supply from rainstorms while the aqueducts can carry it away. So I imagine some desert areas might have these immense 3m catchment basins one after another. That is if people want to live in these places, and if it isn't easier to simply use aqueduct water.

India's west coast water

We should start harvesting and using all of this water, just in case. This is very important tropical water here. We should have means to get all the river runoff to the other parts of India.

Madagascar

This tropical island will always get rain from the nearby sea. It seems wise to diversify here with our ice age water moving preparations. Besides there is an huge highlands area that is up at over 1000m-2,000m. So it will be 6°C to 12°C cooler due to altitude. appear to have a lovely climate.

**We should colonize our deserts
before we try to colonize space**

Truly limited resources

Salted liquid bio-energy burning fuel (oil)
Salted solid bio-energy burning fuel (coal)
Stored Fresh water
Runoff water
Wood/lumber
Good Topsoil
Plant energy
Meat

All of these things that are scarce are related to the bio energy of our planet's living ecosystem, and not the dead planet underneath. It isn't the planet that is limited, it is the ecosystem energy that is limited, especially during ice ages when ash blocks out much of the sun's energy.

Biomaxing

This is the husbanding of ecosystems to maximize agricultural bio-output over the long term. For example some areas are wasteland might produce crops with only 1 annual watering, or perhaps they only need waterproof pots and trees at the bottom of a desert valley and need no additional watering.

Cellular agriculture

Cavendish banana fungus suggests that our agricultural supply and transport systems could benefit from being more cellular in nature.

Global soil inventory

This involves a total cubic KM of soil deposits of various sorts worldwide.

Global land use maps

There are not going to be any national parks. There is going to be a single global land use plan that is pro-human, yet a plan that does guarantee the preservation of unique natural ecosystems worldwide. It will be a plan that will survey the world and make all of each continent's best mineral reserves available.

Pesticides beat burning & fertilizing

I don't know the answer, but it sort of seems like using a micro amount of carefully chosen fast dissolving pesticides is better for the environment than burning the fields to kill the pests and then using artificial fertilizer.

**Cedar Mono-cultures
come from forest fires**

Look at the pine-only and cedar-only forests so common around the western US. Now consider how pines and cedars grow faster than other trees... like after a forest fire. And that feeds into how these trees are also super flammable. So where we see cedar-only forests, we seem to mostly be looking at the result of a huge forest fire. I just want to say again, we really should take note when we see evidence of a past environmental tsunami somewhere. We need to either avoid that place or take proper counter-measures like having fire breaks.

Fast growing Cedars come back first

After a fire, they come back first. So they seem to have evolved to help the fires. This is:

- 1/ Why their bark peels and dangles in thin strips.
- 2/ Why their bark is so spongy and flammable.
- 3/ Why the forests forms a thicket of dead branches.
- 4/ Why their wood burns so hot and fast, like with Pine and redwood.

Thickets of dead branches

I think about the dry chaparral "forests" of southern California. There is this green part on top, but fundamentally, this is an ecosystem that evolved to burn. This is a phoenix ecosystem.

Phoenix species

This is any fast-growing species that benefits from a disaster. It is Cedars in Pines, and the way they have evolved to burn out and then come back out of the ashes. This also is a meaning of the Cedars of Lebanon.

You see, the phoenix was once a thing about a type of forest, not a type of bird. And the forest meaning was problematic because people would understand it as a warning about the whole matrix burning down every few centuries.

Pesticide sap

Evolving the ability to come back first after a fire or earthquake definitely helps with survival. But total success causes monocultures, and these tend to be more vulnerable to pests. So monoculture species tend to evolve sap with some form of insecticide.

Pines are catastrophe trees

Cedars are more specialized for fires. Pines also have an earthquake element to them. They are much better at surviving earthquakes with their tapered tops and low center of gravity. And they grow fast, so they recover territory quickly. But over time, they lose territory to other trees with high canopies that can just grow higher than the pines and take over the pine territory.

Conical cycads and earthquakes

The conical shape of conifers seems to speak of earthquake conditions that existed when they evolved. Perhaps an Earth with much more seismic activity. So the pines evolved to come back from both fire and earthquake, while the cedars are more of a fire pure play.

Santa-ana wind axis

Both the prevailing and the Santa ana fire winds blow along one axis in San Diego. I presume the same with the pacific northwest. So our fire breaks there need to be more north-south-ish.

Macro fire breaks

Maybe we should have these long firebreaks that people live in and keep clear. Maybe we have these north-south zebra stripes all through the pacific northwest. Frequent fire breaks in phoenix forests should be the norm and the breaks should be placed according to a regional plan.

Terrorist trees

The plants that evolved to burn fast and to produce natural toxins, the plants that kill off the other species: Maybe we should consider them a nuisance. Maybe we should reduce that area these plants occupy. Maybe we should consider that the monocultures of cedar forests are from unfair biological competition, and that we improve biodiversity by reducing the size of the cedar forests and increasing the size of whatever other plants grow in that region. This especially if the phoenix species was introduced to that place.

A territory rescued from scoundrel species

I have not done the numbers, but I am pretty sure that our impact on the planet in terms of square meters used is far less than that of the cedars and pines.

Forestry

Forestry is not about preserving the pristine natural state that existed before men came along. That's conservation. Forestry is the management of wild and semi-wild woods for the benefit of mankind and without doing too much harm to the inhabitant species. But forestry is also about making fire-fighting access and breaking-up pine and cedar forests to prevent forest fires. It is also about replacing certain, phoenix species monocultures that are fire-prone.

Habitat protection and phoenix species

Here man is protecting habitat from the terrorism of a few malignant species that burn it all down every so often because their kind gets almost everything when it all grows back. Instead, humans take the illegitimate phoenix plant territory and use some for non-phoenix wilderness, and the rest for human purposes, and nobody except the Phoenix strategy planets, the pines and cedars and other fast growers are worse off.

Cedar, Pine and brush protection

We should definitely try to phase fire-friendly plants out from around our communities, and perhaps certain other areas.

Unspoiled wilderness

How are we going to protect them from forests from fires if we don't have access? To me, unspoiled wilderness is a thing of the spirit of hiding resources. We really should worry less about spoiling the wilderness with roads and worry more about having roads to put out forest fires.

The highlands

We will take the ridge tops because they are cooler and more beautiful and because our R-100 styrofoam encased concrete hives and our puffer clothing makes us mostly immune to the cold when it is colder. But most animals avoid these places.

Ice age global burns

It is not inconceivable that 1/4 or more of the world's forests will die and burn in the first 4 years of an ice age. Where did this happen previously?

Phoenix forestry

Let's assume that we go over the edge into the next Ice Age. Is it better to have lots of Forests that are mostly going to burn uncontrolled. Or maybe we can find some other replacement species that are not going to be so

much of a fire hazard — plants that will remain in place dead and unburnt for us to use.

Soil sustainability

We can make soil build up anywhere or we can make it blow away. This is an important subject. I would like to see a bunch of typical soil composition charts for the various sorts of soil on earth. These go on 3 continuums for too-much water, a good amount of water, and not enough water.

The cortical species

We are the cortical species and the guardians of the terrestrial biome. We have the power and duty to play god with the biome of our planet.

Oil pipelines and fresh waterways

When they exist near rivers, they must be sleeved and the outfalls must have adequately sized earthen or concrete pits for the capacity of the pipeline and 3-hours to shut down, just in case. Multiple pipelines can share the same pits, and indeed must share the same pits, which in general are supplied by government on public property, like the pipeline rights of way.

The strategic petroleum reserve

There is simply no need for this. We have plenty of oil in the ground. What would be better is a diesel fuel moving around pipeline system that connects to each township plant and its oversized emergency fuel storage tanks. Down the road from the plant is the diesel fueling station for a number of townships. This sells diesel fuel. This sells this for whatever the standard distribution mark up is. This is what all the ground vehicles use.

We really should fix Africa up nice

This is because half the world may wind up living there in the next ice age for climate reasons.

Salmon farming

Because salmon breed in streams, they are the most optimal fish to farm:

- 1/ We don't have to sail all over to catch them. They come right to our nets.
- 2/ They show up at our nets ready to breed. We intercept them, milk them, incubate and hatch their eggs, feed their babies until the short mortality spike is over. Then we release the young. Thus we multiply their spawning output.
- 3/ Because the salmon are caught on land, it can go for immediate processing next door. So salmon is fresher.
- 4/ It should be illegal worldwide to catch salmon from the ocean. These fish should belong to their breeders and only be available for harvest as they arrive at the river's mouth for spawning. Doing this will boost the worldwide salmon harvest by several fold.

5/ The salmon from the big rivers will become domesticated worldwide.

6/ Osmosis and osmotic plumping must make it very hard for salmon to tolerate fresh water again. This is probably why they don't eat while in fresh water. So we catch them at the mouth of their artificial river, where the water is still rather salty. Then we spawn the eggs in some predator free artificial environment. They we give the babies whatever they like to eat. Then when they are big enough we raise the salinity of their water slowly and release them into the ocean in an ideal place for them to survive.

7/ Do salmon do better when they are laid in saltier water? What is optimal salinity, temperature, environment in general?

8/ Only large fat, and healthy looking males should be bred, of course.

9/ The fat runoff from the land will continue for years after the sky stops working. Salmon will be a valuable source of fresh protein.

Renamed places

- 1/ The Colorado River of Texas shall be renamed the Austin river.
- 2/ The Canadian River of Texas shall be renamed the Panhandle river.
- 3/ Vancouver Washington shall be called Portland Washington.
- 4/ Once we are using regional voting centers, the old national capital and the district of Columbia shall be called Potomac Virginia.
- 5/ Mexico City shall be called Azteca.

Livestock density

- 1/ It should be regulated everywhere to prevent over-grazing.
- 2/ Unauthorized and abusive grazing should be a crime.
- 3/ Assessing over-grazing is yet another function of the assessor's office. The reasonable fines for this (even on private property) will get most livestock using electronic shepherd devices in no time.

Electronic shepherds

They keep a lifelong GPS for your meat animal. If it is all field time until less than 10 hours before slaughter, then the animal is called free range.

I bet we can also march our pigs and chickens around a course where they they are conditioned to go in a circle in and endless quest for some sort morsels of animal chow. Maybe 1/48th of the pigs in the building get trot around the building every half hour. Then a sprayer arm washes off the pig's area with hot water. The pigs sleep in these heated/chilled shallow bathtub sized bowls with a drain. The electric shepherd takes them out every day for a little exercise, around the building twice perhaps. Then there is an automated "car wash" and blow dry. People are hooking the pig up to the electronics, They are loosening

the collar as the pig grows, checking on the pig, but that is it. The pig farm is totally automated.

Tragedy of the Commons ended

Electronic shepherds are the solution to the tragedy of the commons for grazing. Only so many sheep are allowed, and the commons thus never becomes over-grazed again. And this is metaphorm and with this sort of system we can share so many other things, like mines and smelting furnaces, and medical equipment. Sharing is largely a thing of accurate monitoring and scheduling, so the shared stuff doesn't get abused.

A better way to tax agricultural water

If you use less than 10cm per year for your irrigation, the water is heavily discounted.

If you use 10-20cm per year for your irrigation, the water is discounted.

If you use less than 20-30cm per year for your irrigation, the water is taxed.

If you use over 30-40cm per year for your irrigation, the water is 2X taxed.

If you use over 40-50cm per year for your irrigation, the water is 4X taxed.

If you use over 50-60cm per year for your irrigation, the water is 8X taxed.

If you use over 60cm per year for your irrigation, the water is 16X taxed.

1/ Everything is calculated from the start of one growing season to the start of the next.

2/ In some water-scarce places, taxation might start at 5cm, in others it might start at 60cm. And maybe the numbers and price breaks are quite different.

3/ Under this sort of tax system few people are growing rice in the desert.

4/ This is the price for water during the dry season. During the wet season, all the water might be at the totally discounted price to encourage people to build local water impounding facilities. Maybe also people are allowed to sell their impounded water for the higher price during the dry season provided it was kept in safe catchment. Maybe some people specialize in building catchment. Maybe whole communities do this to save on dry season water system charges.

Cloned lollipop trees

It's not inconceivable that forestry people will be planting these cloned trees with super fat straight GMO trunks that have no branches for five or 7 m up, so they produce all clear wood.

Chemistry policies

Chemistry is such a specialized and technical thing. It's a wonder we allow laypeople to make policy decisions about what is toxic and what is not. Maybe we should have a requirement that all Senators voting on chemistry and toxicity have some degree of technical expertise.

Perhaps Senators must have had a year of inorganic chemistry, and a year of bio-chemistry before they're allowed to vote on such things.

Tomatoes

1/ They should have no part of the tobacco genome added to them by genetic engineering. These lines should be eradicated.

2/ Is it wise to assume that tobacco is the only carcinogenic nightshade?

3/ Check the nightshade molds and make sure they aren't carcinogenic... like with rotten tomatoes.

4/ Low quality over-watered tomato that people will not buy in Italy can't be sold in other places. Only proper Italian grade tomatoes may be sold as red tomatoes.

5/ All tomato products shall be tested for tomato mold levels.

Asian industry, Asian rice

Never mind the air pollution, what about the pollution in your rice?

Rice should be tested for contaminants

This is one reason why the Japanese don't want foreign rice.

Rice and the environment

It is ironic that the continent most vulnerable to toxic contamination is also the greatest polluter.

If plastic lasts forever...

How come it rots so fast sometimes?

Before we colonize space...

We should try to have a pressurized community at 7,000 meters up.

The burning of biomass

We should probably regulate the use of this special and precious form of energy.

Animals

The warm blooded value proposition

It is that a higher metabolism creates a faster speed/ time for the animal. This allowed the proton-mammal, to simply out-run or out-react reptiles.

The evolution of flight is not a leap

Flight evolved many times on earth
How many different insect species fly? There are pterodactyls, and gliding squirrels, gliding lizards, and of course birds.

T-rex worked in packs like alligators

Just compare their size to the large sauropods. T-rex is maybe 25% of a large sauropod. How does such a small animal bring down such a large animal without working in packs?

Plants that can't be pollinated

These probably require insects. And we really want to figure this out, these plant species that will die out without insect symbiots spreading their pollen. This is a very important area for our bio-diversity shepherding effort. And we need a term for plants that are heavily reliant on insects for pollination vs. those that are not. Maybe it is "styled or unstyled"

Why pollen tubes evolved

Plants that discriminated in favor of insect born pollen got traits from further away than those that took whatever blew in.

Pollen insects

This is another area we need to understand very well. It is a small part of insect diversity, yet it is perhaps the most important aspect of entomology.

Britanica.com

The process of plant fertilization is not asexual. Stop presenting it as self-fertilization. There are lots of flowers, like in a field of *Lampranthus spectabilis* (fine ice plant). These dry out their pollen attachments and then the wind comes and blows up clouds of pollen dust. Then this waft's down wind up to say 200m. The cross pollination aspect is quite important. Also the network effect should be taught to kids. And here we see not only a very important networks effect, but one that is easy to see. And having this the model early in their mental toolbox is a good thing. It is math thinking. It is evolution thinking. It is business thinking. It seems valuable so hence rewarding for students. Also without it pollination makes little sense.

The style of the flower

It would be interesting to catalogue the gonadal structures of plants and show and compare the "styles" of the plants that need insects to reproduce as well as the ones that do not. This is really a basic science thing, a high school science thing.

The corpse flower

Here is a parasitic plant of darkness and undergrowth. But its rotting meat smell was the mock fruit of dinosaur carnivores dying of hunger.

The corpse smell

The smell helps with both pollination and ex-semination. The smell attracts insects for pollination and hungry reptile predators for ex-semination or seed passing. This

ability to fool reptile predators is what caused the corpse flower to become successful. Also the smell probably helped keep the herbivores away. Maybe we should try experimenting with using the smell as an animal repellant.

The evolutionary path of the corpse flower

Judging from the giant size and the structure of the fruit and seeds, corpse flowers were a macro-fruit vine that evolved to put roots into their hosts. But when they became parasites they didn't necessarily care so much about seed dispersal range vs. cost... because they didn't really pay anything for their energy. And they couldn't burden their hosts too much or they would die out. So the corpse plant minimized. It stopped growing up to the treetops as it once had. Instead it stayed on the ground, where it no longer even photosynthesized, but acted as flower and roots alone. The rest of the plant completely atrophied in the plant's bizarre new reality.

All that remained was a flower for reproduction, a flower for making seeds, a flower for producing useful odors and drugs such as the smell of carrion, which worked for hungry bird-brained dinosaurs. This is because some of these animals might range 100 miles before their gut filled up and began working again, and they deposited the corpse flower seeds in a big pile of nutritious fertilizer. It basically participated in the macro-fruit/ macrosaur seed spreading system on the basis of a strong 2-day flash and timing. How does it know when?

Flower odor cells

Maybe we can reprogram these cells. Maybe they are more flexible with regard to producing chemical output.

Corpse flower drugs

There are almost certainly drugs/ poisons here in the fruit and in the stinky plant itself. This is definitely a plant that could use some animal manipulation drugs. It could use: 1/ A way to kill animals and provide fertilizer to its host so as to make up for the energy it uses. Do hungry rodents fall in?

2/ The bottom of the flower we might expect to be tasty but poisonous in a hard to taste/smell way.

3/ The fruit growing on the central stalk is for the big (goat or cow-sized) animals that are welcome to it. But they might not eat too much because of the smell/flavor, and because of the drugs that are easy to overdose on... unless you are a nibbler like a starving large carnivore might be. Attracted by the smell and blood/meat color. Maybe it hasn't evolved to fool the animals when they get up close because that would waste energy. Maybe the smell just gets the symbiots in close and then when they realize, there is where the plant sells them on some flesh colored fruit instead. A few taste ok, but there is that nasty unpleasant aftertaste. Also there are probably secondary

drug mechanisms against nibblers, and drugs to help make the

The giant stinky anti-pode of a flower

Corpse flowers are sometimes 5-feet across and have 12' stalks. Look at the brief and infrequent show. Big quick show. Not a lot of energy used per decade. This is all driven by the parasite's need to conserve energy (which it probably does very effectively). Because here is a plant under extreme evolutionary pressure to conserve energy that does not kill and bring in meat for either it or its host. So it wants its fruit nibbled and its seeds swallowed. Have a few. But no more. The first nibble is probably very tasty, but the fruit soon becomes unpalatable in some way.

Papaya as corpse plant

The fruit falls on the ground, breaks open and then smells and looks like meat

Parasitic plants for bio-energy harvest

The way parasitic plants suck energy will probably give us a way to harvest storable pure bio-energy. This should be well studied, with an eye towards this direction. The tropical parasitic plant does the tapping, then we divert the top part. Then we dry out the juice, or mix it to produce a stable isolate.

Here I imagine tropical forests preserved, but forced to "give blood" every day to the bottom halves of corpse flower plants that flow into a rubber tapper vessels which are collected by humans and sold like raw rubber.

It is probably insect pollinated

Given the smell, the corpse flower plant probably has abundant insect contacts. And insect pollination is better. So the plant probably become reliant on flying insects for pollination. In fact, it must strongly favor insect pollination.

Should we fertilize and spray water?

Does a good soaking mist after dry pollination help with pollen germination and improve fertilization rates? Should orange growers be driving water trucks with 20 rain-birds on top, on a periscope pipe to water down their freshly pollinated trees?

Corpse flowers are parasites

They have no visible leaves, roots or a stem. They get their water and nutrients from a host plant.

Corpse flowers seem to bloom when the host is most stressed

This is why they bloom at the end of winter when energy stores are lowest and new growth demands highest. (March 18 and 20 according to the Cornell film.) How does the corpse flower know this? Might we be able to bio-chemically test plant health in the same way?

Corpse flowers are very sophisticated

They have lived in many niches... tree, vine, parasite.

What olive trees evolved for

They evolved to lure sauropods out into the desert. There would be a drought every so many years and the sauropods would be driven by hunger to leave the lush and go towards the desert to graze the opportunist trees that often waited decades to get their fruit eaten by a starving sauropod in a drought. That is what the long lived Olive trees are. Also, these dinosaur drought trees did not need to produce costly macro-fruit, so they generally didn't. Also, they didn't need to offer sugar, so they didn't waste energy on this.

Jacaranda fruit

I wonder what that Jacaranda fruit tastes like. You know, the pods are maxed out for for shape recognition from certain angles. So yes, Sauropods could discern fruit shapes. And the dry weather Jacaranda probably didn't have much food to offer much, like with olive trees.

The nutritious skin is a lie

What a stupid mind virus this idea is. Mangos and mangosteens and citrus and many other fruits clearly evolved a skin to keep animals out. Fruit skins are there to be a barrier to the fruit inside. Mostly this is by bad taste. But it might also be by poison.

Wash your grains well

Grain dust tends to get moldy faster. So the rice dust is the worst part, not the best. Wash your grain well. Also, maybe we should require that all grain in all processed foods be sufficiently washed and quickly used. Is that such a huge thing to ask?

Acid in fruit

I wonder if it is to keep Birds from eating too much. Birds are real sensitive to acid due to their thin and more importantly maxed-out bones.

[https://www.gettyimages.com/photos/tree-with-thorns-on-trunk?](https://www.gettyimages.com/photos/tree-with-thorns-on-trunk?mediatype=photography&phrase=tree%20with%20thorns%20on%20trunk&sort=mostpopular)

[mediatype=photography&phrase=tree%20with%20thorns%20on%20trunk&sort=mostpopular](https://www.gettyimages.com/photos/tree-with-thorns-on-trunk?mediatype=photography&phrase=tree%20with%20thorns%20on%20trunk&sort=mostpopular)

Trees with thorns on their trunk do not want to be climbed. They only want giant sauropods eating their fruit.

The giant sauropod with their incredibly long necks. Has anyone ever presented a theory for why this evolved? It obviously evolved to reach the tops of the trees. And sauropods have such tiny teeth. They must have been eating fruit. The teeth rule out leaves.

Long-tall washingtonia palms exist to keep the cheaters out of the fruit treasury held up high where only the tallest

sauropods could reach. That should be how high the sauropods could reach, the height of the tallest palms.

Rearing up and brains

The sauropods that were hooked up on a tree often had a "bird's eye view" of the surrounding area. And before the advent of flying, they probably had the best view of any terrestrial animal. It is important to realize that this was an important step in the evolution of minds and sight for terrestrial animals. Also, the constantly eating Sauropods could probably see predators coming from great distances away. When we combine this with reptile slowness, and how quickly reptiles tire out, and related rates for locomotion: It is easy to imagine that the best place for sauropod predation is at the watering hole.

Omnivorous triceratops

1/ Their heads evolved to look like large leaf plants, so their heads at least were probably reptile green (like an anole lizard). They would hide by crouching down in groups and simulating a patch of plants for the brainless reptile coming to eat them. They may have even evolved a meat simulation on their head plate.

1/ When the predators came for a look/sniff, triceratops would leap upward driving their horns into the attacker. This is the real reason why triceratops fore legs are so strong. Also the longish neck was probably laid on the ground along with the head (like a dog laying on the ground) but with horns more or less at 45° forward. So when the attacker comes, the head gets raised slightly and the slack removed. Then there is a sudden pushup combined with the head being jerked upward like a bull does with its horns. Also notable is the way the head plate in some versions have a bend to allow the head to be raised even more upright. So presumably this was helpful to survival.

3/ The flock of triceratops may have also "bull-horned" the injured predators and eaten them.

Dinosaurs and hair

1/ Does most of the fluff from fluff-seed tree species (like cottonwood) engage-with and get caught in hair or feathers anywhere near the way thistles do? If so then dinosaurs probably had hair. If not, they probably did not have hair.

2/ Hair does not fit with macro-fruit seed dispersal because it helps small thistle-like plants cheat on the system and harm the plants feeding the dinosaurs. So the giant dinosaurs that supported a plant symbiotic species that gave no food value would quickly find their habitat shrinking and tend to die out. So reptile dinosaurs might have developed hair, but until the end of the macro-fruit system, that hair would have been punished by nature. So I'm doubling down on my skepticism about hairy dinosaurs.

DOGS

Pet health and safety

1/ All pets must be registered and vaccinated.

2/ All pets must all have a tracker implant. It is vital to feral dog and cat control that fresh escapes be tracked down.

3/ GSP complaint videos of unpleasant experiences with dogs may be sent to the recorder who matches the video with tracker numbers. Dogs with too many complaints must be muzzled thereafter when in public places. Dogs may also be banned from urban and suburban property for too many failure to scoop complaints.

4/ Biting and nipping may also be reported, as can very aggressive dogs.

5/ The luxury tax for pet food is paid 4 times a year in advance. This depends on the type and weight of the animal.

6/ The pet food tax pays for the animal tracker and monitoring system, in addition to raising money to feed the hungry people of the world.

The pet section

Why is the pet section twice the size of the baby section in so many US grocery stores? It seems a symptom of a dying human society.

Dog grooming is a luxury

The washing of dogs belonging to other people should be subject to a 300% luxury tax.

Perhaps dog ownership rights should be seen along a continuum in each community.

1/ Where can one keep a dog?

2/ Where can one take that dog?

3/ Where must dogs be muzzled in public?

4/ What breeds and dogs behaviors are prohibited?

Fighting dogs

If a dog repeatedly gets in fights with other dogs in public, it should probably be seen as too dangerous to live with people. Once that second video comes in, the dog is blackballed from public places.

Community pets

What if each trestle road had a dog or three, and the same with cats.

Dog shit penalties

Those convicted of not cleaning up after their dog, must take dog shit clean-up calls. If it goes to trial and they are convicted they get maybe 2,000 calls.

If they plead guilty from the start, it is only 400 house calls. This way people with front yard dog shit can enter their address and the penance folks have to go can go and clean it up.

Dog urine, klingons, and bite risk

They certainly don't belong where people are walking toddlers. Let's have special small children places where the kids will not get worms, or get bitten.

Pig hunting

Maybe we keep dogs big enough to hunt large pigs with, but no bigger.

Marijuana and drugs

Agricultural products

It's hard to find a cultivated plant spice that keeps for months and sells for over \$20/lb. Even shelled pistachio nuts sell for less. Yet marijuana buds commonly sell for \$5,600/lb (\$350/oz).

Drug license advantages

If we push all drug users onto de-monetized drugs dispensed by government dispensaries then:

- 1/ There are few over-doses due to dosage variability.
- 2/ Nobody is committing crimes to get money for drugs.
- 3/ Nobody is selling their body to get money for drugs.
- 4/ We know who should not be driving, operating equipment, working in dangerous jobs, and teaching kids.
- 5/ We can cut some people off from drugs, and we can more effectively trim the doses of heavy users.
- 6/ We have an easy and objective way to determine when we have to take people's kids away.
- 7/ We know which users are at risk, and which need intervention. we can push these people into monitoring facilities like old jails refitted with inside-the-cell switches for the doors.

Drugs: free but not free

Let's say that heroin costs \$20 a pack and the going cash wage in your part of town is \$10/ hour. But let's say that government is also offering the same drugs, pharmaceutical grade, pharmaceutical dosed, safe fresh needles every time, and you get a nice quiet darkened cubicle to sit in for a few hours. But you have to watch 2-hours to 8-hours of propaganda under video monitoring, or with with number prompts (the screen flashes a 7 and you have to press a 7 on the keypad to get that 1-minute increment to count. But you can just sit and watch the reconditioning media and in the same time, you get your drugs. Then once we have driven the black market out of business, then we slowly dial down everyone's dosage over a few months.

Regarding Marijuana...

- 1/ Which animals will eat it?
- 2/ Which animals will lick it from their fur?
- 3/ Which animals will acquire a taste for it and return for it?
- 4/ Which animals come to marijuana smoke?

Hemp vines

There may be a whole other half to the marijuana drug fruit on genes that are linked with perennial and vine like growth. Also, these far ranging tree-vine traits will get little benefit from die here tactics.

Better Marijuana

1/ In Japan they cut off much of the fruit on many kinds of fruit trees. They do this so the energy goes to the fruit that remains, and these get larger and tastier.

2/ If the grazing animal nibbled off one or two buds from a plant, but left the plant mostly intact, The plant would benefit from sticking to the prime directive of seed spreading. It would be interesting to see if this "Japanese fruit pruning" reduces CBD or raises THC in Buds. Here we might take one bud off every week To simulate nibblers.

3/ The best tomatoes in Italy come from the dryer regions where the tomatoes do not get all the water they need, but are a bit starved for water. Maybe the same thing holds for marijuana, and the plants grown in hot sunny and most importantly dryer environments produce headier buds.

4/ I think about the concentrated flavor of small wild strawberries In comparison to the gigantic strawberries that we see in American supermarkets. Perhaps this is a good context for understanding small sativa buds vs. Indica buds.

5/ We should expect that the, slow growth, low-light, and more perennial traits in marijuana are more associated with the die-here strategy. On the other hand, the faster growth, full sun, annual and vinelike traits seem to be more associated with a run and find out sort of drug mix.

Marijuana dry mouth & munchies

Marijuana gets its highest benefit from being only nibbled. This way, many animals going to many places deposit a few seeds here and and a few seeds there. So to keep one herbivore from eating everything, the plant causes dry mouth. Then the nibbling animal goes off looking for water and food.

Marijuana growing

Marijuana is much more harmful as an expensive fungible than as a drug. Therefore, reasonable government attention/action should be paid to reducing its cost to the true margins. So we imagine that people bring their harvests to oversized farmer's markets that rents 1m of counter at a price equal to say average hourly wage. This is so marijuana will be very cheap and it will not be a very effective fungible. And instead of paying a lot of money as a tax on marijuana, people will have to watch a 1-to-5-minute of marijuana propaganda each day to keep their licenses up-to-date. Perhaps in California it will be 1-

minute, and in Malaysia, it will be 5-minutes of propaganda.

John Gregory Bork describes hashish

"one of the greatest curses of the East"... [Users]

"become maniacs and are apt to commit all sorts of acts of violence and murder"

Hashish isn't a particular drug, it can contain anything.

1) If the hashish has opium and you don't get it, you will be like a junkie in need of your fix. Then you will be willing to commit all sorts of violent acts to get your fix. This is the true meaning of an ad•dict. He is a person who does what he is told.

2) Nothing greases the path to addiction like hashish in its various interchangeable forms.

3) It is easy to add opiates to marijuana, and this can be a definite pathway to opiate addiction. Thus marijuana has been a "Gateway drug" many times in the past. And this must be recognized. And it must be recognized that for this reason, we definitely do not want the marijuana industry (legal or not) in the hands of organized crime.

Cheap opiate test kits

We would certainly reduce addiction if people could tell when something was laced with opiates or cocaine.

Jupiter speedballs?

Roman incense has tested positive for marijuana and opiates. But did it also have cocaine in it? Now that would put Columbus in his place.

Herbal or harb•al?

Harb•al, or herbs and poisons of the dar al harb.

In the heroin addict facility

1/ The doses are dispensed by exhorter techs that must have never used Mafia drugs.

2/ There is a long line, a standing line for drug dispensing. The people who are moving towards lowering their dosage don't have to stand. The people who are increasing dosage have to clock hours of standing in line to get their dose. The people holding steady spend maybe 1 hour in line each day. If you can accept a reduction, a notch down in dosage for that day, you don't have to stand in line at all.

3/ There are mandatory laps, twice a day. You must leave your room at 6:00am. If you don't leave, they will pick you up and throw you out of your room. When you leave, the door locks and remains locked until the system clocks your laps. The same thing just before daily dose time in the afternoon.

4/ There is also lights out.

5/ Some facilities allow tobacco, others are entirely tobacco free.

Indigent drug addicts

We will make 7-12 levels of addiction by daily use and body weight:

Broke and over 60% of max

Broke and over 50% of max

Broke and over 40% of max

Broke and over 30% of max

Broke and over 20% of max

Broke and over 10% of max

Broke and over 5% of max

Broke and off your drug

The 60s people get an 4-person jail cells with 23 hour lock downs and the worst jail food. Each level gets better and better food and accommodations until they get off drugs completely and then they get 24 hour freedom and their own room with a refrigerator and internet.

Drug control

The first rule of public policy with regard to undesirable stuff is that nobody should be making any serious money on drugs. This is because the profit causes drug sellers to schmooze and giving away free samples. And government is so weak here in comparison. So government is never going to overcome this. So our first rule is that we must demonetize drugs and make them non-profitable to sell. De-monetization results in 3 big added benefits:

1/ Nobody is marketing drugs or trying to figure out ways to get people hooked as customers.

2/ Nobody is being driven into prostitution or crime so they have drug money.

2/ It's better that people pay with time than money for drugs because if they are paying with time, we can make them watch anti-drug media.

The black market is a bigger problem

Wherever possible, we should avoid prohibiting things and causing a hugely profitable black market. This is because the black market will keep the problem alive for profit alone. And we don't want any part of society engineering problems.

Gradients of prohibition

There are lots of ways to hamper the Mafia drug industry. Policy needs to use the right techniques:

1/ No borrowing for that purpose.

2/ Businesses entities can't be used.

3/ The electronic money system can't be used.

4/ Government gives away lab-quality drugs to free to people who complete their daily drug propaganda.

5/ Government has a mandatory Orwell marketplace or dispensary so use can be better monitored.

6/ No advertising or touting of drugs. Naked lunch and its genre needs to be called out as "hashishi" propaganda.

X/ I lean towards 4, 5, and 6 for the most popular drugs. For unusual designer drugs 1,2, and 3 can also be used.

10-step drug licenses

Each sort of drug license should have at least 10 dosage stages and

Primary jobs and expensive imported drugs

If we assume that a substantial amount of the money made on Mafia drugs will leave the nation; then drug legalization will help the economy a great deal.

A spiritual headwind for heavy substance use

Maybe alcohol consumption above a threshold should be a thing that spouses, employers, doctors, parents and grown kids can view if they care to. No more hiding our drinking or drug abuse. And the unemployment roll statistics will reflect "clean" as well as pickled workers.

Wines

Wine labels can't lie about the grape varietal, blend, or the process.

Lithium as a drug

- 1) Do some people ineffectively use this nervous system electrolyte?
- 2) Maybe it is more effective when used with magnesium and potassium.
- 3) Maybe it is more effective when used with extra dietary cholesterol.

Gambling licenses

- 1/ The people gambling are the ones that need to have a license. It is enough that the casinos are regulated by the state for fiscal purposes.
- 2/ It takes maybe 7-30 days to get one's gambling license.
- 3/ One gets licensed in one's county of residence.
- 4/ Government helps people stay off gambling by allowing irrevocable renunciations of one's right to hold a gambling license. Renunciations for years are also allowed.
- 5/ All positions, gains and losses get recorded, just like with Wall Street.

Economics

Mohandas Gandhi

"Earth provides enough to satisfy every man's needs, but not every man's greed."

Mohandas Gandhi

"There are people in the world so hungry, that God cannot appear to them except in the form of bread."

Hindi Kubera

In greek a Kubera is a government, while in Hindu it is the god of wealth. Interesting intersection there for these two related languages and for corrupt government leaders.

taxes

Why discourage elders from moving down?

Which city has a better housing situation:

City A: Everyone who sells their house has to give half the money to government.

City B: People who sell their house get to keep all the money. At least we should let people with grown kids sell their oversized houses tax-free to people with kids so the stock of family homes is less expensive to their actual users, the people who are making the next generation of citizens.

Tariffs are not trade wars

- 1/ We should tone down the trade war rhetoric in the media. We should say that Asian currencies are undervalued and that Chinese workers are clearly not worth one tenth of US workers any longer. Until they are revalued, there should be a special tariff on imports.
- 2/ We should come out and say that eternal light tariffs are a good thing as they reduce international consolidation of industry. The prospect of an eternal 9%-25% tariff will have a profound dampening effect on trade.

Germany and religious tax

They ask immigrants what religion they are and if they name one, the religious taxes are automatically debited. People can of course check a box and say they are not religious. And there is absolutely no problem or risk with that, unless you are Muslim. Then you fear becoming apostate and abandoning the cause that brought you in.

Custom inspections

I would inspect every container. Then I would use the Senate's 1:10 number, the final digit of the importer to decide which containers get a secondary independent customs inspection after 2:00.

Religious taxation

- 1/ Religious taxes should never in any way involve government, except that they may use government's transaction system.
- 2/ Each payment to a religion must be authorized separately.
- 3/ Religious tithes, regular payments, and income-based payments shall not be supported by the government's payment system when the payee is a religion or a religion affiliated non-profit.

Another reason to abolish income taxes

They tax efficient factory workers while not really taxing illegal and inefficient landscaper workers.

Tax holidays to motivate young people

I might multiply the money people make in the first 2-years of leaving school by 1.2x or maybe 1.3x to start.

This will get people used to working long hours. And this is in addition to employer overtime. I might offer a reward of 1.1x to those over say age 65, who work 2,000 hours a year and those over age 70 get perhaps 1.2x, so they stay productive and live longer and healthier. Then at 75 we start shortening the work day required for this.

Business not to tax

Government should not extract any money from the following

- 1/ High output grain farming
- 2/ Construction of dwelling units under 50m, provided these are rented by the week at least.
- 3/ Education.
- 4/ Ranching and Shepherding that uses no grain except during transport.
- 5/ Group transport of 14 or more passengers per vehicle.

A better tax system

- 1) The people/government are selling all the real estate once every half century or so. So that is 2% of the housing stock value per year.
- 2) There will be high property taxes instead of high property prices.
- 3) The roads will pay for their own maintenance in use fees. The paved area will get 10 or 20 times smaller.
- 4) The tobacco users will pay for tobacco illness.
- 5) The sugar users will pay for diabetes illness.
- 6) The Alcohol users will pay for alcohol illness.

Wedding gift taxes

What wedding spending should be taxed:

- 1/ Special costumes
- 2/ Catering
- 3/ Reception hall rent
- 4/ Official fees
- 6/ Gifts have no special taxes or declarations beyond normal gifts. Alcohol given away at weddings is still subject to user licenses and personal alcohol taxation.

Government and equality

- 1/ Government treats all citizens equally under the law.
- 2/ Government provides the same core educational system to all children.
- 3/ Government is aggressive with inheritances.
- 4/ Government starts out with an apportionment where everyone owns their residence.
- 5/ After this, there will be a total economic free-for-all where there are no taxes at first and then consumption is taxed.

No hidden taxes

All taxes must be included in the purchase prices with a parenthetical like price=4.98, taxes=\$0.83.

Personal trainers

Generally, for physical activities, if there are 4 or more people paying for the class, there is no luxury tax. If it is less than this, then it is a luxury.

The mattresses racket

- 1/ Mattress sets costing more than say 3-day's pay in the US should pay a luxury tax on the excess.
- 2/ Mattress sets costing more than say 5-day's pay pay a super luxury tax on the excess.
- 3/ All new mattresses must come with standard sized zip-out toppers.
- 4/ All new mattresses must be flippable.
- 5/ All new mattresses must be made of entirely new materials.
- 6/ All new mattresses must come with an fitted/elastic plastic mattress cover of the prescribed material and thickness. This in addition to the packaging plastic.

Inheritance of assets

- 1) I grew up around lots of rich kids.
- 2) I think that inheritance might have once been a good thing in material society. But now that society is becoming post-material, inheritance does more harm for the best kids and for society than good.
- 3) I don't think that leaving a legacy is a substantial motivator of working parents. Grandparents pay lip service to it, but I think it is mostly bribery of one's progeny.
- 4) Nowhere is it written in stone that freedom is freedom to leave a billion dollars to your kids. Nowhere is it written in stone that equality includes inheritances. These things are totally up to a society to define.
- 5) In a land where all men are supposedly equal and free to make a life for themselves, I think we should err on the side of high taxes for inheritance, as this promotes equality and hard work among out new generations.
- 5) Having high inheritance taxes throws a huge wrench into the mechanisms of multi-generational economic parasitism — and Ishtar is surely the greatest proponent of tax-free inheritance.

Defeating tariffs

No nation shall be allowed to defeat the tariffs of another with tax credits, or to offer export tax credits. The correct response to this is to increase the tariffs perhaps repeatedly. Also, where it is inferred that a nation is offering secret credits, or using an undervalued currency. The predatory pricing victim nation may take other measures to increase the cost of trade with the predatory nation.

Non-profit property tax breaks

We don't want our urban centers full of non-profits because of a tax advantage. So under my new tax system, non-profits must pay the same location taxes as anyone else.

Don't tax people for making money

You can tax them for spending the money, for safely storing the money, and for not making anything with the money, but don't tax people for getting off their asses and doing something with their money, for that is at the core of what makes freedom great.

The wealth tax

It will be the main tool for dealing with the network effects of the ultra rich.

Public ownership better than corporate taxes?

A big difference is that with public ownership, government does not get a preferred return. It doesn't get its money before the actual investors. It is instead a co investor with un-dilutable shares. And this might start out at a flat 5% for micro companies, for the privilege of doing business. And payments for the first 5% might normally be waived, unless the Senate thinks the business is mildly detrimental to the public.

Then, as the company grows, so too does the share the government claims of it until we are looking at near monopolies that are perhaps eventually 90% owned by government. However, this only comes with industry domination and monopoly power.

Ad tax

App solicitations are taxable ads

Facelifts pay luxury tax, dentures do not.

Car sales price

All cars advertised by an individual or dealer or displayed on the sales floor/yard with a price must be delivered at that price. This includes all transaction fees and sales taxes. The seller pays this price to the DMV and the DMV takes the transaction fees out and sends the money to the seller. The DMV gets the regular sales tax and luxury tax for new sales of private vehicles. For resale transactions, the DMV shall charge a flat rate of 2%, but not less than one day's wages. Some other thoughts:

- 1/ All vehicle transaction amounts (and statistics) shall be a matter of public information. So dealers can't hide how much they paid.
- 2/ If the dealer middleman takes possession of a used vehicle, they must pay a 3% recording, appraisal, audit and investigation tax.
- 3/ As no agreement for payment of sale commissions will be legally valid, the realtor model won't work. The only way for the group selling facilities to get paid is now by charging a listing or lot space charge in advance. There is an hourly fee for test drives and mechanic visits. This is enough to assure a good supply of people who will go out and act as monitors. Monitors that don't care one bit if you buy their car or not.

Foreclosure taxation

Today, according to S & P, and the google's search answer, the average foreclosure costs 26% of the average mortgage. Now it should be pointed out that all of that 26% figure is waste, pure waste. I think in the ideal system, the cost of foreclosure should be about 1% plus a month's rent, and there should be about a 25% tax on foreclosure instead. It is wise to have a high cost of foreclosure, but it shouldn't be pissed away in legal fees and waste. It should be captured by government and used to reduce the tax burden to society during the crisis. The high cost is also wise, because it discourages the practice of lending with an eye towards foreclosure.

Fancy appliances and luxury tax

The modal price for stoves, dishwashers, refrigerators, auto-washers and the like plus say 10-to-40% pays no luxury tax as this is normal pricing. So refrigerators costing less than say \$1800 pay no luxury tax. However the residential refrigerators that cost above that will pay progressively higher luxury tax. And if a person buys an expensive commercial refrigerator for their home, they will have to pay luxury tax on it.

HEM= Healthcare effectiveness multiplier

HEMs 80-100 are paid by society

HEMs 60-80 are not taxed

HEMs 40-60 pay low luxury tax

HEMs 20-40 pay high luxury tax

HEMs 0-20 pay super-high luxury tax

Perhaps better we cut the pizza into 6-divisions, or perhaps we have 60 increments to our parabolic taxation of healthcare resource squandering

Ownership of undeclared assets

For a person to own or transact a major asset such as a vehicle or some realty, they must pay taxes on that thing. If they do not pay taxes, there shall be no ownership right.

There is definite congestion at the LAX circle road. I would charge every single non-bus \$20 per lap at peak times. This goes on top of any fare. Then taking a \$15 bus from one of 100 stops in Southern California will be a bargain. Then most of the 90,000 passengers and 20,000 daily workers will use transit instead of adding to the famous LA traffic.

Re-apportionment Cars, furniture, and machinery.

Generally whoever is in illegal possession of something, keep that thing debt free after the re-apportionment. Also, things ordered but not at least 15% paid for are property of the buyer, and things not at least 15% paid for remain the property of the seller.

Net pricing mandated

Everything that states a price is a netto price that includes all taxes and fees of every sort needed or customarily done in transacting the sale of that thing offered for sale.

Rules for trade and ports

- 1/ All shipments shall be declared and quantified by the national government. There shall be no exception for air or sea freight, or goods carried by tourists, or goods shipped in the mail, or similar means.
- 2/ The Senate shall be the first trusted agent of the people.
- 3/ There shall be no warehouses at any international shipping port. All containers stay out in the elements and under multiple video until they are cleared.
- 4/ All containers must have their number and bar/QR code painted on all sides in at least 60cm bold type.
- 5/ At least 20 Senators from all over the nation are stationed at each of the nation's ports and rotated every two teneths.
- 6/ There are no buildings in our shipping port areas, except for equipment rooms and minimal inspector offices.

Cash-free

No sin-gifting

- 1/ Only the person engaging the prostitute or using the drug should be allowed to pay for their sin.
- 2/ Companies and fictional citizens are never allowed to hire prostitutes or provide private entertainment, or give drugs or alcohol to the representatives of their business relations.

Corruption and crime aren't really things of people

They are more things of bad government, bad education, bad economic policy, or bad policing.

Proper price reporting

Governments really should commit to reporting on the average price of about 500 things. The average hotel room rate, the average used personal vehicle value. The average price of chicken legs per kilo, The average wage for yard workers.

Explaining the money

This is going to be the big thing. Explaining where the money came from and auditing the explanations of the money. This is going to be the real auditing in the future. It's not going to be about the numbers adding up and matching, so much as the explanations. Where did the money come from exactly? What was the money used for exactly?

The nature of audits will change

The taxation emphasis needs to be on the stuff, not as much the money flows.

Owner occupied loans

Owner occupancy is randomly audited by the recorder at least 6 times for 3-years. The cost of this audit is 2-hours pay per visit, and this is paid in advance in escrow.

Making false statements on loan applications

- 1/ Nowhere should caveat emptor rule more than where people lend others money.
- 2/ People are always going to exaggerate their financial condition to maximize their access to capital.
- 3/ It is quite a slippery slope as to what is lying on one's loan applications.
- 4/ People should be able to give their lenders access to view the lender section of their government financial records,
- 5/ More important is that people sign an recorded affidavit answering black and white questions like:
Are you related or connected with the seller?

Aid money in a cashless world

Imagine say Nigeria, but now imagine that there is no cash and accounts are super hard to get and anyway everyone's hand print and face scan are needed to both get an account and to access it. And imagine there's all these counterfeit gold and diamonds floating around. How how do you do business except by using the system? How do you buy anything in a Nigeria except using the system?

A big brother economy

This is what you get when you eliminate cash from society and pretty much all the transactions are tracked. We will of course not have this with anything that is potentially sneaker-net equipment. So there is no reason to object to it.

Orphan support accounts

This has social media, donation accounts, and limited use cash cards for kids living in orphanages.

Welfare moonlighting in a cashless society

Going cashless is not making this any easier.

Tax welfare money with time

Let's make people receiving public aid pay for that aid with their time. At least make them spend 1/2 as much time getting welfare.

Charities and money

Just because a flock trusts some priests with their money doesn't mean the rest of society should. Also, we should not allow charities to accept cash donations.

Transactions

Fixed payment obligations

Fairness dictates that these will have to be re-calculated in consideration of the new value of money. The entire Main-Senate will elect a number in each teneth. They vote a number, a percentage that the national currency will be revalued at, up or down. This may only vary by a small amount per session.

No discounts for payment method

Vendors may not offer discounts to encourage people to use any particular payment system. They may charge to recoup costs associated with systems, but they can't offer discounts to encourage people to use one system or another. Also vendors may not offer discounts for using their own idiosyncratic payment system.

Chargebacks

Having a good chargebacks system will greatly improve the business environment. Most transactions are via a system with a 3-day delay between debit and payment. If the buyer is unhappy, he can stall the payment until the 8th day for a sliver cost and a boost to his plaintiveness score if he loses. During this time, there is arbitration and the sides present their cases and answer questions.

Charge system rules

1/ All account holders may at any time turn off their account to all new charges, as well as to charges from specific merchants.

2/ If you charge something, it is always a charge for a price and that price must be stated in writing, an email or text message, or an app screen image. The charge system does not permit open-ended charges. There is always a maximum possible charge.

Prompt insurance settlements

Insurance companies get 7-days to fund full payment if the loss is already over. After that, all delayed insurance payments incur a late penalty of 0.1%, 1/1,000th per day. This however does not apply to suspicious circumstances marked by public law/fire investigators as suspicious. Healthcare insurers must provide immediate approval/disapproval 24 hours a day. The time period for non-emergency healthcare approval is normally limited to 12 hours, but must average under 6 hours

County mortgage services

The receipt of payments, default processing, mortgage dispute resolution, and foreclosure should all be services provided by the county government for a slightly profitable fee.

Safety in banking

Banks and stock brokers must allow account holders to limit withdrawals to personal appearances and to also delay non in-person withdrawals by up to 7 days

Ruining your repossession

If people start running behind on their payments, the bank can send a county inspector out to video document the asset. If there is a sudden decline in the condition of the asset while the payments are late, then the owner may be charged with intentional destruction of collateral.

The world really doesn't need people destroying the property they mortgaged. This just drives up the cost of housing for absolutely nothing but spite. Also, this does not really apply to vehicles, but to abused real estate.

Insurance settlements are public record

If you receive an insurance settlement, this is automatically displayed and described and photoed and videoed by the public adjuster(s) on your public income page along with any money awards from government. The time period is lifelong. There is a direct link from your facebook homepage to this.

No debt insurance

Debt insurance surely alleviates minor metaphorical forest fires in markets but makes the forest grow more flammable, thus causing major fires/ market crashes that require bailouts. The sale of all forms debt "insurance" should be banned and unenforceable.

Title insurance is a scam

In Iowa, title insurance for a million dollar property costs \$160.

Public insurance claims resolution

This would probably be a good idea. Here, the person making the insurance claim gets 90-99% of the money and the county gets 1-10% for handling the Adjustment depending on the dollar amount. Let's also use this approach in healthcare environments, where in addition to the customer inspecting his bill, we have the public "GAO" computer checking the bills and making sure they are not statistically aberrant in any of several possible ways.

Hacking insurance

Insurance for hacking and data security should be prohibited due to how the industry will cause hacking and protection rackets, as well as inflated lawsuits for hacked businesses.

Stimulus spending

Aside from debt flating, all economic stimulus spending should go to the people equally, including conforming minors and up to three pre-existing kids as a universal capitation credit.

Flateing debt

The central bank should also have the power to Lower and increase rents, and to declare short rent and debt holidays, for things like plagues.

Auction rules

- 1/ No auction may be cancelled once started.
- 2/ The winner of an auction has the legal right to buy at the winning price.
- 3/ All reserve prices must be declared next to the current price in same sized contrasting text. Reserve prices may never be hidden or less obvious than the current bid.
- 4/ The public auction fee must be paid regardless of who is handling the auction.
- 5/ Auctions are an important part of sharing and should be encouraged by government
- 6/ All counties must offer auctions. If the final amount is less than a teneth's pay,
- 7/ Auction fees shall be 8% on the amount under 1-month's pay. Auction fees shall be 2% on the amount under 1-year's pay. Auction fees shall be 1% on the amount under 4-year's pay. Auction fees shall be 1/2% on the amount over 4-year's pay.
- 8/ Government will emulate Ebay in many ways.
- 9/ The renting of property may be auctioned, but it is not required.

Delayed funds dispersal

There shall be a 3 business day hold at all receiving depositories for all transfers of funds exceeding one year's pay.

No closed sales of majors,

To prevent under-reporting of value, all major goods should be required to transact on the open public market.

High interest paid on poor deposits

What if we paid the very poor 18% on their savings, while billionaires had to pay or 3% on their wealth? Here is how I imagine the increments for people's deposits:

Under 2 month's pay: 15% interest

Under 6 month's pay: 10% interest

Under 1 year's pay: 5% interest

The cost of the clerk

If the person ringing up your groceries costs \$20/hour fully burdened, then, your little 3 minute check out costs \$1. If your bill averages \$50, the checker adds 2% to your grocery bill. If the checker is idle 50% of the time, they add 4% to the cost of your ticket. This incidentally is the math that leads to grocery store lines.

No SKU — no buy

If you have an item without a SKU and there is a line, the cashier finishes ringing you up, you pay and you can either abandon the item, or you can put your stuff to the side and get the SKU verified yourself. Once you have your SKU verified, you can go to the front of the line because you have already waited. The right thing to do is NOT for the cashier to leave the register and hunt down the price. That is the wrong thing to do.

Incentivizing cashiers

They make the greater of \$X per hour or Y cents per item scanned in each hour. This is so the workers all hustle real fast in the peak period to make as much as possible, maybe twice the pay by working at 2X speed. Thus the cashier staffing can be lower.

Off peak discount

Maybe a 0.3% discount for shopping off-peak should probably be customary.

Cartridge retail

These are like maybe 1/4 the size of a large container. Or maybe they are 7m x 20m. Maybe they get loaded (identically) at a central facility and swapped out at the retail site. Not only is this more efficient for stockers, the stocking is taking place nowhere near the center. It is not inconceivable that these containers are taken from the train by gantry crane and then put in the township retail area.

Automated grocery

Everyone going in has a registration/member ID with bar code. No ID, no ability to transact. Only members are allowed inside. The people take what they need, scan it, and put it in their video-zone cart. In fact they probably have styrofoam cooler boxes and car boxes (like stackable milk crates) inside the cart. They get bring these boxes stacked up from their trunk and unstack and put them in the cart. They scan the goods as they fill the boxes and as they shop. Then they leave with no check out. Then they put the boxes in the car, and then they take the boxes from the car to the kitchen.

investing

The office of anticipatory supply

Within the framework of a free enterprise system, the Senate might also trade in a way that anticipates shortages and works to alleviate them in advance.

All orders are limit orders

People may not give market orders for exchange traded things. There must be a maximum bid price and a minimum sell price stated. It can be a penny, but it must be stated in all exchange orders.

Futures markets

1/ There should be a bias, favor, and responsiveness in futures markets towards increasing production and a disfavor and unresponsiveness about activities that will decrease production.

2/ One of the easiest ways to increase output is to decrease the cost of storage of excess. Thus we imagine that government has "give-away" leases for the

construction of storage warehouses around the hub cargo system. Maybe paving an area gets one a 5-year prepaid lease, and putting up a permanent warehouse gets one a 15-year pre-paid lease. This way there is lots of storage and the economy runs plump rather than lean.

3/ Having lots of storage is a thing of the people and their free markets. It is the enemy of the artful dodgers who would run sphinx shortage scams.

4/ Low cost storage of output has a vitally important supportive function that goes hand in hand with the sort of Knudsen output that will end material scarcity. Once we make the goods, we can't just leave them to rot in the rain. And we can't keep them in our expensive Manhattans. Where will we keep them?

Make investing simple

1/ Register and objectively judge the businesses for obvious signs of fraud or stupidity.

2/ Lifetime records for all those on the money wanting side.

3/ If a non-moronic certified business wants to take in money from a couple hundred arms-length certified investors, what business is it of government to hinder this process?

Misleading investors

1/ All investor communications are monitored by the county recorder's system.

2/ The Senate is constantly looking for places to put money. It is also rating investments on various metrics like: windfall potential, competition, etc.

3/ The penalties need to ramp up with egregiousness.

Grameen bank+

Bengali Gramina = peasant

To my mind, most aid money should be paid to women and their kids for obeying the UM's population control efforts. In the poorest nations of the world, this will be the main source of national income. Now some of these women and their households will also work and build a surplus. Let's provide them with free cashless banking for the money that is coming to them cashless as well.

Also, this surplus (up to say \$3,000 per aid recipient) may be kept in a UM Grameen bank which pays artificially high (UM subsidized) interest rates of say 1.5% per month on their micro-deposits (which will grow at \$45/month if they have \$3,000 saved). Then this Grameen bank money is lent at 1% per month (a loss).

Courses in Micro-finance

All our business, finance, economics (BFE) school people should do an 24-month course where they meet for 1 hour a day for 4-weeks and then 30-minutes a week for 24-months.

1/ The process of business evaluation is a very useful thing to impart to our BFE people. This who gets the

water question is the one question of all BFE. Let's make sure everyone in BFE has gone through the process of making this decision themselves.

2/ Here we have students practicing with real world cases, and making real investment decisions using their own real money. This will make the learning realer, better understood, and more formative.

3/ This sort of evaluation is a process, and here in micro-finance, life is simplified and naked of its distractions, like in the desert.

4/ Our money people all get a sense of the hard economic reality and trade-offs of the world's poorest.

5/ We might also say that investors in the top half get their return doubled, while those in the bottom half get wiped out. This so people try. This might also look good on one's resume.

6/ We should require written business plans, or at least transcriptions of the borrower's pitch video. Then we use the students and graduates and locals to help vet the plans.

7/ The vetting of borrowers themselves involves putting a poster on their door/home saying they are a candidate for a Grameen loan. Then their neighbors need to be able to post to the @borrower account if the person is lazy, or drinks. These claims are then investigated by the Grameen investment queue to see if they are valid.

8/ Grameen-type community pressure banks should be encouraged. Also this is sort of the way the Mideast works.

Charities and commissions

Sales commissions are a thing of for-profit enterprises that need a way to motivate their workers. Charities are not supposed to need to motivate people like this. They are supposed to motivate people by their cause, not personal profit. Also, this is a thing that we see abused. So we should not allow non-profits to pay employee commissions of any sort. Regarding real estate commissions, they may pay only up to 1.5% commission to buy, but they cannot pay any commission to sell.

No tax advantage for non-profits

What a foolish thing to subsidize charity across the board. Many charities are dumb or poorly run. Therefore, all charities should pay the same property taxes as everyone else.

Economic problems

Give away the shaver but sell the blades

This is something that Wall Street loves. But it is really a scam in a couple ways.

1/ Consumers get sort of deceptively corralled into path dependency and greater spending. The very reason why Wall Street loves this tactic.

2/ It represents a financial fraud for investors... a fraud that normally "blows up" eventually. This is because what is really just a purchase is magically transformed through financial alchemy into the illusion of continuous cash flow that is multiplied by 15-fold to 50-fold in stock market valuation.

3/ Government should discourage this tactic by Requiring standardized replacement parts and eliminating IP protection on replacement parts. Thus other companies can sell blades on your subsidized razor.

4/ Essentially all the problems here can be eliminated by withdrawing government IP protections and requiring standardization.

The shop vacuum economic problem

Home Depot, and Lowe's each have about 10-meters of display dedicated to shop vacuums. These come in many shapes and sizes, but conspicuously, not one has a hose longer than 2-meters... (although you can pay \$30, more than half the cost of many vacuums) and buy a 3-meter hose. The reason is that the vacuum industry, like the printer industry works on the sale of replacements. In the shop vacuum industry, it's the redundant bags/filters which cost 8-50% of a new vacuum each. In the printer Industry it's the ink cartridges that frequently cost more than the cost of the printer per 1000 pages.

>>>>

Now with printers this pricing strategy is simply an economic nuisance. But with vacuums it is also a public health problem. You see, no matter how good the filter, there is always some dust that makes it through. And this little doubt leads to much disease and early death. The way vacuums should work is to put the device outside and have a long hose to inside. But here we note how the 2/3 meter shop vac hoses sold in Home Depot and Lowe's are all designed in such a way as to prevent them from being daisy chained together. You see, this can't exist under today's rules, because it would cut into the profits for the sales of totally overpriced bag and filter.

>>>>

The way things should work is that all shop vacs should be required to include two 4-meter mostly transparent hoses —so one can see the blockages. These screw together like giant garden hoses with clamped rubber washers like garden hoses, and are required to form air tight seams. They are also required to have minimum interior diameter of 5-cm, and be of greater durability than today's shorty vacuum hoses. Also, no accordion style hoses. Also vacuum manufacturers that are judged as intentionally sabotaging their hoses to play the bag game should have to pay toxic waste type fines for causing people to breathe indoor air pollution. blade

Welfare exhorters:

1/ We emulate the substance abuse exhorters. 2/ We make welfare recipients watch one hour of motivation media daily.

3/ Our exhorters make most of their money when their cases people get off welfare.

4/ Every welfare recipient has to drag it down to their case-worker's store front daily. There they meet with their case worker daily for 5-minutes to get their money. Every day at 2:50-2:55 pm (or whatever time). If you are not there with your propaganda viewership QR-code at the prescribed time, you don't get your \$10 (or whatever) daily welfare payment for that day.

Make welfare as hard to get as building permits

Waste the time of welfare recipients

We want it to always be more difficult by a wide margin for able bodied people to get welfare money than to work. If unskilled people must work 8 hours to make \$100, then they should have spend 10, 11, 12, 13, 15 hours getting \$100 in welfare. The longer they are on welfare, the harder it gets. Have them do something online that is productive, or pointless, but make welfare always harder than working.

Also, with long term welfare people, maybe they are constantly turning away long-term welfare families, and making welfare recipients go further and further to their exhorter.

Welfare recipient surveillance

All public aid recipients get unannounced visits every so often by randomly assigned monitors. The monitors go and see and photograph what the person is doing. No monitors, no money. Also, perhaps the monitors make most of their money by busting welfare fraudsters who are working or engaging in black market commerce.

poverty poor

Lets raise the bar on the poverty line

1/ The poverty line = the down the tubes line

2/ The mobility line = enough money to go to another place and/or start another job.

3/ The partial independence line = having enough to take 4-years off.

4/ The full independence line = having enough to take 20-years off.

5/ The rich line = having enough to take 100-years off. The benefits of automated manufacturing and just allocation are just starting. We will soon need to have higher economic fairness bars.

Income inequality

If everyone makes the same amount, nobody tries to work. But also, if there are only 1,000 oligarchs and everyone else is dirt poor, that harms output too. So we want some inequality, but not too much.

Substance abuse licenses help eliminate welfare floaters

Let's just imagine that we are successfully in driving nearly all the substance abusers into getting drug licensed and watching drug video all the time. And let's assume that 95% of people are getting free (or nearly free) quality drugs/alcohol/cigarettes. And the black market drugs are super expensive (like using a phone company to make long distance calls). And let's assume that it is not allowed to receive dole payments if you also have a drug/alcohol license. Or if you smoke more than a pack of cigarettes a day. Don't we sort of push all the welfare addicts in one of two ways? Don't they all either get off the stuff, or get off welfare?

Business size categories

We should categorize our businesses on the basis of size
Proprietor = just you and your family in business.

Garage = 2-3 people full time.

Shop = 4-19 people full time.

Small business 20-99 people full time.

Medium business = 100-10,000 people full time

Big business = over 10,000 people full time.

Macrolife = How Elon Musk or Donald Trump lives... with giant possessions.

Microlife = The lifestyle of Sam Walton, Warren Buffet, Chuck Feeney, David Cheriton, Ingvar Kamprad.

Augustus = au·gustus = gold·lover

Corporate word deleted

Maybe we should kill the word corporation for use in describing business entities. Instead, let's call them other words:

Fictional citizen = a word that emphasizes that the entity does not share in the rights of real flesh and blood men.

Shell citizen = a business entity that primarily exists to protect its masters from liability.

Fake citizen = a word that gets at how the artificial citizen is not helping the real human citizens of a nation, but harming them.

Public money citizen = PMC, a public money making company.

Group money citizen = a GMC, a money making venture that has a large group of stake holders.

Small money citizen = a SMC, a money making venture with a small number of stake holders.

Dirty Jobs

The word labor is supposed to mean that the work is less pleasant than normal for some reason.

Lift labor = heavy lifting

Fatigue labor = exhausting

Filth labor = filthy/ dirty

Risk labor = potentially unhealthful

Gross labor = disgusting

Emo labor = emotionally draining

Boring-labor = boring

Injury labor = dangerous

Suckup labor = too much sucking up

Confrontational labor = confrontation

Luddites = Those opposed to automation because it puts their jobs at risk. Except for some reasonable advance notice, society must never give luddites anything, or any say at all in how things are done. Also, non-owners in redevelopment areas should be considered luddites and given no say in the decision making process.

Luds = people who loose due to sensible government action.

CONNECTED SOCIALISM = socialist, policy that fits with the hard realities of market economics.

DISCONNECTED SOCIALISM = socialist policy without a mind to the hard realities of market economics.

OPM theft terms

OPM DIVERSION = OPM managers wrongly diverting client money.

OVERPAY SCHEMES = When a OPM manager proposes or allows charges that are too far from the going rate for either a big project, or for numerous small projects.

OVERPAY AND KICKBACK SCHEMES = Allowing overcharging on one's watch for money or favors.

CROSSTHEFT = sell-out your client's interests.

SHELTERED BIDDING = when an OPM manager fails to use a public bid board or otherwise has a closed bidding situation

INCOMPLETE BIDDING = when an OPM manager does not get enough open market bids.

BILL OF GOODS = when an OPM manager sells a bunch of work/goods that are not needed to generate management fees.

Cheefy = en·tre·pre·neur·i·al

Entrepreneur = cheef, driver

To put together for profit = to cheef, to drive

Entrepreneurial = cheefy, drivy

Entrepreneurship = cheefy, drivy

Entrepreneurially = cheefy, drivy

Entrepreneurism = cheefy, drivy

The word entrepreneur, and entrepreneurship are long and cumbersome words, they are actually blids to make it harder for people to think about, and discuss setting up businesses and competing with Ishtar. Let's have two new synonyms for entrepreneur:

CHEEF emphasizes the insight, innovation, and bringing things together

DRIVE emphasizes the hard work, organization and management.

Financial morality

We should teach this to kids over and over again in school

KINKY BUSINESS = selling alcohol, drugs, sex, porn, nude dancing, short-term hotels, boiler-room phone sales, selling empty products etc. The business environment should be preset to no, and people should need government before they start a kinky business.

BPS = Business Process Streamlining

OPEN THEFT = where the theft is discovered, as in: "Where did my bike go?"

HIDDEN THEFT = where the theft is not perceived and is instead disguised as waste, overpayment, salaries and inefficiency.

Dumpling welfare

This is where homeless people get put in hotel rooms, or where people can buy steak and pizzas with their food stamps.

to TISTRUETH

What an important thing to be able to discern the truth. Yet we lack a word for it. Telling the truth means something else.

Reapportionment looting

This is when innies cheat on the reapportionment.

Macro-inequality = inequality between communities in a nation

Micro-inequality = inequality between individuals in a society.

All contracts recorded

1/ All contract must be recorded publicly in order to be valid. Thus all contracts become available for public inspection and this improves pricing transparency.

2/ Having recorded contracts makes it much harder to corrupt bidding.

3/ People will be able to see which of their associated businesses are growing over-extended.

Host liability

When people open their homes and properties to others in need, and the other people become injured through some random accident that is not truly the fault of their host, then the host should have no liability under the law. Also double or triple damages should apply to those who wrong their charitable hosts or their neighbors.

Liability for new safer ways

1) Those selling a new product that is statistically safer than existing products should not be held liable for harm

to individuals that are harmed by their product, even if different people are harmed.

2) Those selling a new product that appears as if it will be safer than existing products (as elected by the Senate) should not be held liable for harm to individuals that are harmed by their product. For example network operated cars.

US manufacturing

To my mind, there are 5 main things that are driving US manufacturing overseas

1) The income taxation system

2) A mis-priced currency.

3) Product liability.

4) Environmental liability.

5) Employee liability.

Company process and the law

The people working for companies tend to do the same thing over and over again. If there is a problem, it is either this process or workers not doing what they are supposed to do. The companies are responsible for the process, and the employees for when they go off course in a criminal way. This unless the company has some incentive to be a crook.

Government wages

1/ They go up and down with inflation and deflation.

2/ If government requires the real economy to shut down, then government's budgets shall be cut accordingly.

3/ To the extent that government department is shut down due to lack of need, due to epidemic, or economic slow down, the government wages must be cut as well. Too often we see these government agencies go on for years after they lose their utility.

Labor rights

1/ PAY PERIOD: All employment agreements shall stipulate a pay period, a time for processing this information, and a time for issuing payment.

2/ CLOCKING IN AND OUT: All workers shall be expected to clock in and out using a county time clock. This goes especially anyone billing by the hour. Wages paid without clocking shall pay a slightly income tax to discourage this corrosive practice.

3/ OVERTIME WAGES: All employment agreements shall stipulate a maximum and minimum amount of regular working time in each pay period. All employment agreements shall also state overtime multipliers for work exceeding this amount of work. Government shall generally not limit the amount of time that workers may work in any pay period. Government's default setting shall be to go in the opposite direction and encourage the people to work longer hours. However, where special levels of carefulness and alertness are required, (such as for surgeons, pilots and truck drivers) government may limit work time and also have bed-time monitoring.

4/ SAFE WORKPLACE: Every worker should expect that their workplace environment is safe and has no health and safety hazards. Workers who report hazardous situations shall be protected from all forms of employer retaliation.

5/ WAGE EQUALITY: Employers may use any incorrupt measurement and review process they wish to determine the pay and promotions of their workers. It is socialist folly to require that all workers be paid equally. America is about wage inequality, hard work, and promotions.

6/ WORKPLACE DISCRIMINATION: Employers are not permitted to discriminate against workers regarding hiring, firing, wages or promotions based upon the following factors:

- a/ Being male or female.
- b/ Following any peaceful religion, but not including violent religions.
- c/ Race, ethnicity or national origin, except that employers may discriminate against non-citizens and foreigners in the workplace, as well as people with poor communication skills.

>>>

Employers ARE permitted to discriminate against workers regarding hiring, firing, wages or promotions based upon the following factors:

- a/ Age, weakness, and disability when this gets in the way of job competence.
- b/ Strength, where the work involves strength.
- c/ Non-citizens, as well as citizens who speak the national language poorly or with a heavy accent.
- d/ Abuse of alcohol, marijuana, tobacco, or Mafia drugs.
- e/ Being prone to mistakes, inattentive, uncooperative, lazy, or unpleasant to work with.
- f/ Being overtly sexual.
- g/ Exhibiting behaviors that drives away customers.

7/ VERIFICATION OF CITIZENSHIP: Every employer is required to authenticate each employee's citizenship status when opening an OSHA payment account for their employment relationship.

8/ MEDICAL LEAVE

Unless it is from a job related injury or condition, this should not be paid by employers. It is dumb to burden our nation's companies with this cost when foreign nations do not do this. If this must be paid, it must be paid by the group fund and according to each person's pro-rata share of a fixed budget.

9/ FAMILY LEAVE

- a/ This is not so much of an issue thanks to socialized reproduction.
- b/ If women do what is right and stay with their kids for their first 2 years, they should probably re-enter the workplace in a new position when they are ready. The idea of a leave from the same employer is not realistic.
- c/ No employer should ever be required to pay for family leave, even if it is agree to by contract.

10/ UNEMPLOYMENT BENEFITS: These are paid by wage deductions and government matching funds. In

order to reduce unemployment and keep our nation competitive, employers shall pay nothing for unemployment benefits.

11/ NO RETALIATION: Employers shall not retaliate against workers for exercising their "whistleblower" rights regarding their employers

12/ MINIMUM WAGE: In order to reduce unemployment, government shall be prohibited from establishing a minimum wage.

13/ RECORD YOUR CONTRACT: Government does not enforce employment agreements, or pay unemployment, or pay on the job injury benefits, or indemnify employers, or provide job injury benefits unless the employment contract is recorded on the county recorder system.

14/ ONE NATIONAL LABOR CODE: There are very few aspects of the legal system that burden the national economy as much as our employment rules. There should be one single national code that is easy to understand instead of the hodgepodge of ~180 worker laws enforced by the Department of Labor in 2020.

15/ SEX WITH COWORKERS:

People in positions of power are not supposed to have sex with those under them as this edges into prostitution. If you want to play it safe, stay away from the line at work:

1/ Don't touch the people you are working with.

2/ Don't hit on people you work with.

3/ Don't talk about your co-workers in a sexual way.

16/ MAKE EMPLOYMENT SIMPLE & EASY: There are many difficult employment law systems, and complex compliance apparatuses around the world that reduce employment by several percent. This is no bargain. The entire labor code should fit in a pamphlet and take a day or two to learn.

17/ NO RISK HIRING: Making employment into a lifelong commitment is going in the wrong way. The right direction is to make it as easy as possible to hire and fire people, so the businesses are stronger and need more people.

18/ WORKER SABOTAGE: Government shall record all complaints and investigate. It shall be a felony to intentionally sabotage one's employer.

19/ FOREIGN UNSKILLED WORKERS: Employers shall be required to house these and to post sufficient bond to assure their repatriation.

20/ RECRUITER AGREEMENTS: These are never enforced by government.

21/ NON COMPETE CLAUSES: These are generally not enforceable, except for the for the most highly paid sliver of workers.

22/ TOBACCO USERS: These may be discriminated again.

23/ BREAK TIMES: These must be reasonable and established by the employment contract.

24/ EQUIPMENT: If a costume, uniform, or equipment is required, the employer must supply this to the worker for free.

25/ TERMINATION AND RESIGNATION: This is generally done via the recorder's employment interface.

26/ RETIREMENT AGE: Given the extreme differences in the rate at which some people age, neither government nor any employer shall establish a mandatory retirement age for workers.

27/ RETIREMENT BENEFITS: These should be as much as possible not managed by the employer.

Worldwide labor rules

- 1) To encourage day halving, employees may be required to work 11 hour a day for one half the days.
- 2) No nation shall establish or encourage a full-time work week below 2,500 hours per year. work-weeks shorter than this shall be a thing for the free market.
- 3) Employers can fire anyone unable to do the work, or exhibiting documented anti-social behaviors, or who hints at sabotage or revenge.

Workouts in the context of automation and utopia.

Most people are already walking/running nowhere or doing other pointless activities to keep their bodies healthy. And lots of people are not really working for money.

Workout work

The county recorder should have a category for exercise work, like chopping wood. These are relatively clean activities that involve hard physical labor. Things like digging and shoveling and moving heavy things from here to there and clearing brush, and that sort of thing.

1/ There should be no liability for the employer for injuries if the worker has taken the OSHA training videos and safety tests.

2/ This sort of work is normally done for 1 to 4 hours a day and the scheduling is at the option of the worker. It is sort of halfway between exercise and real work.

If we have robots, why is there still scarcity?

In the robot age, economies actually work better the more we ask of them.

Laughter's law applied worldwide

The real laughter curve is about how when times are good, people laugh at job offers.

Laughing our way to development

We can now bring-about sufficient automation to make much of the world laugh at work so the world needs to import a great many workers. (These were slaves in Roman times.)

Long term employment and job hopping

Government should keep objective, personalized statistics on employment.

- 1/ Each employer should have an overall attrition curve.
- 2/ Each "immortal" position must have a turnover rate.
- 3/ Each worker has an average employment duration. for all "immortal" positions, as well as temp positions.

4/ Terminations that result from employer mass actions such as branch closures and restructurings are not counted, except in a foot note. Also justifiable medical and maternity job departures and not counted in one's statistics.

Unemployment and average wages

Let's have some granularity with regard to unemployment data

UE0 = no education

UE1 = 9th grade graduates

UE2 = high school grads

UE3 = 14th grade grads

UE4 = 16th grade grads

UE5 = tech workers

It will be quite motivating for kids to see how education means that it is much easier to find a job.

The good worker project

This offers thousands of job oriented pamphlets and videos with brief tests at the end. People get an account and then the face/ID has training and skills.

After school, starting out

Let's have this thing where kids leaving school do 6 months of 70 hour weeks at work, while they are still living in the school dorms. The ones that opt for it get:

1/ A pay multiplier from government.

2/ Proof they are a hard worker.

3/ To know they can do it again

4/ A nest egg, a downpayment, or scratch to start a business.

Un-Employment granularity

Government should have statistics on all of these classes of the unemployed.

5% best educated

20% best educated

50% best educated

20% worst educated

Highly skilled

Moderately skilled

Semi-skilled

Unskilled

Now everyone uses a time clock

The county runs the time clock and location monitoring system for workers. If you fail to clock in, you don't get paid. If you fail to clock out, you also don't get paid. However, the GPS keeps alerting you if you go to work and have not clocked in. It also does the same thing when you leave.

1/ There is no employer override for the system on purpose.

2/ When a time clock system is not used, then the employees must pay a 10% tax.

3/ The hard workers want this, and they matter. The skivers don't matter much.

Corporate Ubiquity

Ubiquitous status might go to individuals who help their company's processes and improve the operations of many workers:

- 1/ This will serve as an objective measure for the apportionment of profit sharing and buy-out money.
- 2/ It will objectively identify rock-star managers.
- 3/ It will ennoble top business managers in ways that are beyond money.
- 4/ It will motivate everyone in the company to be mindful of streamlining and fat cutting, because even new employees can participate.
- 5/ Because everyone participates, it fosters more of a "cream-to-the-top, start-anywhere" sort of workplace — the sort of opportunity world we had more of prior to WWII.

Getarounds

Getarounding

This is a person who fills in for line workers, and fixes problems. It is also the higher-paid workers who go around a construction site and do the work between the trades.

Big brother at work

Is big brother at work a bad thing? Is it such a bad thing to require head-cams for construction workers if the public is insuring their injuries? Maybe OSHA people — specially trained retired construction workers — monitor 200 people's head-cams for dangerous conditions. Maybe we use AI to omit the people doing the same thing over and over again. Maybe we use AI to assign a saving co-efficient to the efforts of our workers. Maybe the cam signal is jammed inside toilets.

Overtime and profit sharing

Maybe in some types of business the owners can opt-in for temporary employee profit sharing when people are asked to work 300 hours a teneth (60hrs/week), or 350 hours a teneth (70hrs/week). This can be rescinded at any time by the business. Maybe the Senate should write up the recorder forms so the businesses can easily opt-in and then opt-out when the crush has subsided.

Stop thinking about saving jobs

Governments should want to automate and eliminate jobs, so these people are freed up for more productive things. What if we all drive identical vehicles and there are droids that come out and replace the standard wheels with a new one? Will that not free up people to do other things.

Eastern European labor shortage

If a nation like Hungary can't find workers, its currency is under valued.

Easy to fire = easy to hire

It may strike some as a paradox, but if we make it hard to fire people, we also make it harder to hire them in the first place, and the higher the unemployment rate will be.

Kids that can work

- 1/ All minors age 11 or older that remain in the top 10% of their age cohort with regard to school progress may work up to 12 hours a week.
- 2/ All minors age 12 or older that remain in the top 20% of their age cohort with regard to school progress may work up to 12 hours a week.
- 3/ All minors age 13 or older that remain in the top 50% of their age cohort with regard to school progress may work up to 15 hours a week.
- 4/ All minors age 14 or older that remain in the top 80% of their school may work up to 20 hours a week.
- 5/ Dropouts and those in the bottom 20% shall not collect any child work subsidy monies, and shall instead pay a 25% income tax until they are age 18.
- 6/ Those not eligible to work shall be excluded from government matching subsidies for Encouraging young people to start working at a young age.
- 7/ Young people with their own businesses may not receive government matching subsidies for encouraging young people to work, unless they have at least 20 unrelated people as customers.
- 8/ Government matching subsidies for young people to get habituated to work hard (as opposed to sloth) should probably be capped at around 2 months avg. pay.
- 9/ The money that minors make (together with all government matching subsidies) shall be theirs to spend or save, and 90% this shall not be given to relatives.
- 10/ minors that have completed the Government high school equivalency exam may work at any age full-time and receive government subsidies if they are of the appropriate age.
- 11/ Minors age 11 to age 13 may work from 8 AM to 7PM, and not from 7PM to 8 AM. Minors age 13 and over may work from 6 AM to 9 PM, and not from 9 PM to 6 AM.

Profit shares

People should be able to work for only a profit share. Imagine 400 people working for a factory in 4 shifts, keeping it open 24 hours a day. Imagine that they collectively get 9% or 25% or 63% of the factory's net income instead of a salary. And if the people rotate positions, then they will see pretty quickly who is not keeping up with his share of the work.

There is nothing wrong with greed

People should be encouraged to make lots of money. They just can't be mega-zillionaires with more money than any person could ever reasonably spend.

Windmill investments

Investments with annual net paybacks of less than 1-2% are not actually investments but spending.

Public companies

If a company is over 80% monopoly, economy of scale and brand, it probably should not exist in the private sector.

Property manager mindset

Get control of the asset, and then get the biggest cut you can out of it.

OPM communication

It is all recorded by the county recorder. You send them an email, they can't pretend they didn't get it. Also, it really should be a crime for OPM managers like property managers to use their own people.

OPM bidding rules

It doesn't matter who you are, or whether you are a condo association or the national government. Nobody gets to waive these rules and anybody who attempts to do so can be charged with bidding fraud. In order to be a signature on a group account, or to be a board member, or to serve in government, you have to complete the common sense OPM anti-corruption modules and Pass the common sense test with a perfect score.

Where does the company trade?

If we are breaking up New York and Chicago as financial capitals, where do the various companies trade stock? How do we assign that? And distance doesn't really matter here, except that it is easier to spot unusual data patterns over longer distances. So we actually want things spread out here. We also want the people doing in-out trading not going near the company headquarters, and not having connections with them. And maybe if you are living within 500km of the HQ, or working at the company, or you know people who work at the company, you have to place your trades more than 3 trading days in advance and at the market.

Economic replacement

While they were replacing our industry with a housing bubble and a stock market bubble, and also a restaurant, travel, and entertainment "industry", they were also replacing our sense of justice about wealth with a sense of "You're no better".

A geographical socialism

This is where the most prosperous cities pay higher taxes than the rest... and their prosperity is a thing of the nation, so the money for this tax accrues to the nation.

Is it really socialism?

Is it socialism government to offer free network access because it's cheaper than widening roads. Is it socialism to automate the function of the teacher? because it is cheaper than real teachers?

"Imagine no possessions"

To me, this line from John Lennon's Imagine song is like the table at a potluck party among old friends. These are not words of communism, but of plenty and community sharing. I see a world where material wealth doesn't really matter so much in comparison to the non-thing parts of life like, the human aspect of our lives.

Aristophanes Ecclesiazusae c. 392 BC

"...my scheme is that the people will own in common and share the instruments of happiness [tools or means production]. So from now on, there will be no private property. This is because it is wrong for one man to have too much to spend, while others moan starving, one having too many acres to till, while another is dying of starvation. Some haven't a single skinny slave, while others have hundreds at their command. ... all land titles are now revoked, and everyone has equal title to all the land. And as to silver and all other things big and small, we declare that There's no personal property at first... All the gold must be handed in.... We must destroy the capitalistic morality."

To liberate a service or good

This is when we get together as a government and make something free to increase its use. We make transit free to increase its use, and we make virtual communication free to increase this use. Also with both of these things we don't have as much real world consumption.

Partial command economies

A full command economy is where government dictates the output of all goods. A partial command economy involves government ordering or guaranteeing some goods in some industries so they can be made more efficiently and less costly.

Socialist cells within a free-market organism

This is the correct way to do socialism. The overall organism, the domestic economy is free-market. The socialism exists as entities within an overall free market system. For example the post office, street maintenance, police force and the military.

The end of socialism

Now that everyone has their own home thanks to the reapportionment, the end of popular socialism and communism is at hand. Now there is no more need for socialism, now everyone will go for capitalism.

Socialism, communism and free enterprise

- 1) I don't believe in socialism while there is still scarcity. I do however believe that nobody should be so desperate that hunger or homelessness drives them to crime.
- 2) I slope the playing field towards real humans and away from gigantic fictional citizens. That is not necessarily socialism
- 3) The cost of educational knowledge sharing has been made artificially expensive and I think just a few billion dollars spend on knowledge modules will make college 80%-90% less expensive, and three times more inclusive.
- 4) My world is founded on capitalism and free enterprise. It uses socialism in pockets where it will work and easily pay for itself: The military, the post office, street lighting, garbage collection, internet access, cellular, public transit, pre-natal care, and basic medical care.

"Free" grits

All grocery stores should be required to sell 1kg bags of grits, rice, buckwheat, corn flour, wheat flour, etc. at grain cost with no amount for small packaging costs, transport, or grocery store mark-up. Thus grits will cost 50-cents a kilo (the actual cost of the corn) and not \$3.79 as it currently costs in our nation's grocery system.

Why socialism is the future

I want to be clear, I'm not a socialist in today's world. And I especially was not a socialist in the 20th century. I also don't believe in hurrying socialism.

But I think that as we progress to towards satisfying material needs in efficient ways, socialism will unavoidably evolve and come about through the efficient satisfaction of more and more of our material needs via collectivization. For example soon we will make base internet and cellular service free like trash collection. We will also provide the media library and software as a collective effort. Later we will make immunizations and other big bang for buck healthcare procedures socialized. Later transportation will be socialized via a train and mostly shared driverless car system. My point is that in centuries to come, we will eventually run out of financial and transactional things that people will do as individuals.

Commoditization

To me, this is the process by which capitalism drives the price of all free market goods to mass produced cheapness. This is a very good thing as it makes everyone richer.

Where capitalism works

Don't cross the line. Use it where it works. Don't bother where it doesn't work. Don't use capitalism in the post office, or military, or electricity, or water, or cellular communications.

Wine and IP

- 1/ The regional vineyard associations are not allowed to spend money on advertising or promotion of harmful alcohol products.
- 2/ The name of the vineyard will have no legal meaning under the law.
- 3/ If there is a label on the bottle with the name of the vineyard, it must be separate from the regional identity and rating label. The vineyard label is not protected, the regional label is protected by the IP law.

Materialism

Who says this wine is worth 10 or 1,000 time more because it tastes a tiny bit better?

Wine

The world needs good wine for old people, and bad wine for young people. Let there be a an objective range and let it be very easy for people to comprehend and value.

>>>>>

Wine regions are only protected when they make no reference to vineyard on the label or crate.

Wine ratings

- #1 is for unacceptable except for cooking
- #2 is the worst drinking wine
- #3 is one up from the worst
- #4 is below average.
- #5 is average
- #6 is above average.
- #7 is good
- #8 is very good
- #9 is extraordinarily good
- #10 is perfect
- #11 is beyond perfection
- #12 is the stuff you stock up on
- #13 is good but overrated

The wine ratings and standards stay consistent worldwide, it is just the price that varies. And some place simply will not be able to produce even #4 wines.

Why they call it a fare

It is to prevent people from calling it unfair.

Bordification

A Bordified good

A bordified wine

This is when the sub-senators of a region try the output of the various regional producers and they judge it for quality. And there is no voting in your nome, or a directly adjoining nome, or the same village of under 2,000 people.

Decile bordification

This is when 10% of the regions wine output get a 90+, and 10% get an 80+, etc. Thus there are 9 levels for each wine area. And all the bottles/containers from the same

region use the same design. There it is, minimum salesmanship and money siphoned off on the space between the consumer and the producer.

Bell bordification

This is where most of the ratings lie between 20 and 80. Distortions like this are not the way to do bordification. This should be prohibited because it drives for everyone into producing average quality wine.

To BOSKY money = to give money to friends who give it back to you after your conviction. I recall seeing this white-haired guy living in La Jolla, convicted and supposedly bankrupted, driving a "supercar"

Spare parts and manufacturer warranties

Warranties should generally not be able to say that the use of outside repair parts voids warranties in unrelated areas. If you use after market brakes, it does not void your warranty with regard to steering system failures.

Memorabilia and antiques

Regarding autographed memorabilia and antiques, if this stuff is forged or damaged, or stolen, then it is none of government's business going after the people who took advantage of the other person. All these things should be legally worthless under the law unless they are owned by the public.

Free people should stand committed to destroying the value of gold.

Marius and the matrix

The Ikea stool called Marius is quite a thing. It is barely adequate as a sitting stool, and totally inadequate for standing. It should be about twice as heavy and cost not €3, but €4. A product like this should not exist, yet it does. Behold the Marius—the poster child for reductioneering

Too much historical property

Outside of Europe, there is far too much historic property in the world.

Pottery park driveway

There is a traffic light here where about 100 units disrupt the traffic of about 50,000/day

Government should rate manufacturers for supply chain reliability

Associations of homeowners

1/ All property taxes are paid to the county directly by each homeowner regardless of any prior agreement.
2/ All association fees are paid to the county, and become a county tax lien if unpaid.

4/ All penalties are paid to the county. However these DO NOT become a tax lien if unpaid

4/ All association money flows through audited county accounts.

5/ Homeowner associations may only borrow money with a 75% majority of homeowners.

6/ In all homeowner associations over 3-years old, and with over 1/4 units sold, each owner votes only once no matter how many units their family owns. This includes the developer and any government-owned units.

Innovate to advertise

Well known businesses shouldn't pay to advertise unless they have genuine innovation to promote. Here in this relatively inconsequential trade-off, the Sub-Senate should probably be the judge.

To be enforced, patents must be

1) Novel and not derivative

2) Significant. They must be an actual innovation that is useful.

3) Useful. They cannot be used only to block uses.

Neck-romancers

We should not allow fortune tellers or psychics, or people talking with the dead. This is all the realm of liars and cheats.

Hotel maids

It should be normal to clean rooms except when people leave, or every 6 days, or something like that. People should not be coming into your room unless you ask for them. And then they should clock in and out.

<lithium graph>

The lithium bubble

1/ Lithium costs about \$20/ kilo, so the lithium part of a cell phone battery is only about \$2.

2/ The price of lithium has about quadrupled due mostly to demand for batteries.

3/ The Senate should fast track permissions for facilities for new production.

Unique things should not be insurable

No IP protection in gold-rushes

Senate random numbers

The Senate produces a number of random numbers every day. This is accomplished by a draw of 22 individual digits that are used to create random numbers for the following probabilities: 1:2, 1:3, 1:4, 1:5, 1:6, 1:7, 1:8, 1:9, 1:10, 1:11, 1:12, 1:15, 1:20, 1:24, 1:30, 1:30.5, 1:36, 1:36.525, 1:46, 1:1:60, 1:90, 1:96, 1:100, 1:200, 1:365.25, 1:500, 1:1,000, 1:10,000, 1:100,000, 1:1-million, etc. The draw begins at 2:00 each day and is reported immediately.

Counter signatures

All signatures should be countersigned in a different script. For example you write your name in cursive and you then sloppy print your last name underneath.

Business openness

- 1) All businesses must have an address and this must be accurately displayed on the recorder's map.
- 2) All businesses must post their hours and holiday exceptions.
- 3) All businesses must have and respond to email.
- 4) Businesses that neglect their communications shall pay a reasonable fine.

Investments takes place in LU

Holding labor units will be the only ways to preserve capital.

How do we get ahead of the ball?

I imagine some of you guys are asking: "Where should we invest?", or "how do we get an advantage?"

ISO

The UM will run this, and not some foundation or society. Also each industry in each nation should have a trouble ratio, so raising the quality of each nation's international business practices will hopefully become more a matter of patriotism to many.

ISO standard food dishes

What if we had these "ISO" standard dishes, all made to international standards? What if there was a standard lamb cous cous? What if we had standard Young tau fu, and Pad kee mao. We will have these standard dishes, that are supposed to use proper ingredients and supposed to be made a certain way.

Ambulatory vendors

- 1) They can never go up to people
- 2) They can't enter other people's businesses or public buildings or parks.

AirBNB noise complaints

We want to encourage responsible use of nightly apartments. Therefore we will have special guest rules for people renting and using these.

- 1/ The minimum age for this sort of rental is 21.
- 2/ No parties and no more than 2 non-family guests.
- 3/ he party and noise rules on the offer are enforced by the police who issue tickets.
- 4/ The bar is low for nightly apartment rentals and the fine is 3X.

5/ If either the apartment or the user has too high a noise complaint rate, then they get de-platformed from all the world's nightly rental systems for some years.

Hidden treasure

In just so many ancient texts, like Plato's Laws, we read maxims like: "hidden treasure, hands off". This is because Ishtar has always been keenly aware of how this reduces the value of its gold stores.

Polar economics = the economics of transit nodes

Barcode fingerprint tattoos

If you have one of these, you don't need to carry a ID or a credit card or money. You just use one thin barcode on one finger. There is a thermometer in the scanner too.

55-gallon drums and killing OPEC

Maybe we should only allow oil to be transported across the oceans in strong re-usable drums so that there are no large oil spills.

Trade agreements and

Most Americans don't really understand the fundamental difference there is between a traditional Chinese contract and their own sort of contract. Under a traditional Chinese contract either side can stop at any time and without penalty or even notice. Chinese contracts went on until one side stopped.

Senate OMV

What if the Senates produced open market values for products so people would not have to waste time comparing prices and OMVs.

How to shorten meetings

What if people clocked in and out of meetings? What if they only got half pay while in meetings and no pay while their talk button is down.

The southwest desert

This should be the US dirty manufacturing zone.

Reality-TV IP-periods

All ostensibly reality media is treated as if it was filming of live events. Essentially there is no copyright for more than a day, unless the media is deemed educational by the Senate.

Why glass is cheap

So the infidel Rumi all live in glass houses.

What sustained LA sprawl?

Even in the 1970s, land on the west side of Los Angeles was worth a fortune.. Why were more tall buildings not built? The reason is the zoning code. And everybody owned land in one of these places would've benefited

from a more relaxed zoning code it would've made their land worth that much more. But that never happened because government was controlled by an outside force bent on encouraging American sprawl for the purpose of selling more oil.

Crisis pay

It's generally some multiplier of normal pay.

Hoarding

1/ Those who prepare long before any crisis shall never be considered hoarders and may sell their goods at crisis prices, tax free.

2/ During a crisis all purchases of critical goods must be via credit-card/non-cash so that gross hoarding may be detected and halted.

What is the failure rate for this thing?

Every product should have a failure rate over time, and all premature replacements get recorded so products and manufacturers have a real rating with regard to reliability

No Jewels

It's wrong for society to have these these valuables that can be seized, like a presidency or a directorship, or a supreme court justiceship. And gold is so often stolen and used to transact criminal activity. Lets get rid of them. Life will be much easier and safer and enjoyable without jewels

Real estate agents

They are not a supply and demand sort of thing they only exist because they're able to insert themselves between a relationship and extract money as parasites. It is in fact quite easy to tweak the system so practically nobody uses a real estate transaction helper.

Currency speculation

The international trading of money in large amounts should generally only match spending in the target country plus a reasonable increment. People should not be in the business of buying and selling currencies apart from trade.

The yellow pages

The rule should be that any advertising directory that looks like an official directory is a public thing that is owned by the people, and nobody gets to usurp this taxation power for their own private ledger. Also, the Donnelley directory was the don·ali, or the don·ally directory for bros. The yellow pages was for the yellow leaves.

Music artist without IP

Most real music artists will still do it for nothing anyway. Getting rid of the copyrights will most keenly affect a

second group pretending to be the first group for profit and lifestyle.

America

Land of oversize houses each with 400 sq. ft. warehouses and pick-up delivery vehicles.

Crying wolf & crying racism

When people apply the word racism wrongly, they cry wolf.

They diminish the power of the word as a call to action.

Garage commerce

Until we get food courts online, let's allow up to 16 people to be served dinner in people's 2-car garages.

Rupees, Rupiah, and Baht,

When we revalue the Yuan, the Indian Rupee will be forced up with it. And so will the THB, the IDR, BRL, KES, MXN, and all the currencies of the developing world.

Event photography

All event photographers are required to be on instant backup. Full account access must be given to the client.

War for profit

This is the most important aspect of wars in my mind. I always ask who is benefiting from this war, from the death of many people.

HR and lease commissions

Just like with Realtors, they're subject to commission sales tax. Also, the contracts are not enforceable.

Proper price reporting

governments really should report on the price of about 500 things. The average hotel room rate, the average used personal vehicle value. The average price of chicken legs, The average wage for yard workers.

Every business has for public viewing:

- 1/ Return ratio.
- 2/ Plaintiveness.
- 3/ Annual turnover
- 4/ Principal location(s), base of operations.
- 5/ Contact person, and contact info.

More prizes more innovation stimulus

The big thing that ubiquitizing IP will do is it will take the \$10 billion prizes we give out today and turn them into 200 prizes of \$50-million + status. This will make innovation far less of a long shot sort of thing.

No merchant's unions

1/ There should be no unions of all the merchants in a marketplace, and the definition of a marketplace should be broadly understood.

2/ Market collusion for break-up is proven by high prices alone.

Network size and evolutionary speed

1/ Economies are networks. If they have lots of nodes, then they evolve fast. If they only have a few nodes, they evolve slower. So if we are trying to tend our marketplaces, then we want large networks with lots of small nodes. We want many small businesses instead of a few large ones.

2/ Show me one famously vibrant and dynamic economy in history that is not a place of countless small shops. Not one exists.

International pollution standards

All UM member Nations must abide by the new global standards for their industry. There will be timetables for retirement of the old polluting systems.

Sales skimming

This is when the store allows the clerks to make over the recommended price if they can, and keep all or some of the difference. Often this is only in poor places and only with tourists. This should be prohibited. It should be a crime as it interferes with the proper functioning of the market, by praying up on those that need something quickly or don't want to wait and waste time with salesman.

Multi-form clothing

This has most of the economic benefit of uniforms with most of the benefit of unique clothing. Maybe we have 30 or 100 totally spec'ed-out items in various sizes, with standard cloth, threads, patterns, sewing designs and specs. And some companies will make versions for different body types. But there will be no brand identity at all on the outside of this type of clothing, for it will be forbidden. It can't even be on the inside of a rolled cuff.

Government spending by sq. meter

Wherever possible, spending must be budgeted and explained by square meter and this must be compared with normal range, like on a blood test.

no pet burials

All pets get cremated.

Government shall monopolize the issuance of money

Free alibaba listings

All goods that were entirely line made in our nation get free listing in the Senate's alibaba and they also get consumer reports testing.

Russian oligarchs

These don't exist to motivate the people of Russia with their wealth. They are more of a version of the

ost•end•tation of China's forbidden city. Or maybe the Tzar's palaces. Or maybe it is Roman oligarchy among a sea of slaves, freed slaves and plebs of a slightly elevated standing.

<<<greenland topo map>>>

The minerals of greenland

1/ Greenland is the oldest land mass, substantially older than other parts of the planet. It should have lots of metals at the bottoms of its valleys and at the bottom it its inland sea. Drill prospecting is certainly called for.

2/ The continent may be extraterrestrial with a different mix of elements.

What people will soon say

You know, when I was your age, people had to work 30-years to pay off a house. Now you can pay off a house in 6 or 10-years. Your life is a vacation in comparison.

A \$25 oil tariff

This is what is needed to keep Mideast oil out. Or better yet, let's just prohibit oil tankers from our ports.

A democratic big brother running the mafia economy

This is important for the proper taxation and deterrence of mafia drugs, tobacco, alcohol and prostitutes.

Georgism/Geoism is a blid

Neogeism is Geoism tweaked so that the long term right to the land and other shared assets belongs to the people who then sell and give leaseholds to those who develop the land. Thus the long tail is always eventually recaptured by the people who are constantly re-selling those rights in reversion as a primary way to fund the government.

Time to build out the islands

There is going to be a huge glut of container ships going forward. There never will be a time when cement for house castings will be this cheap. So let's put a million units on each of Hawaii, Maui, Oahu and Kauai. And let's build out Greenland and Madagascar and some other islands.

Record all official professional documents

If you have an engineer sign off on something, then he records that thing with the county recorder, and anyone can then look at it, and refer to it.

Senate new product promo

I would like the Sub-Senate to assemble one or 4 hours of new stuff promo videos per teneth. Then people can watch as much as they want. This will go a long way towards lowering the cost of starting new types of businesses.

Exports should be inspected as well as imports

Ruining someone's view with your building

What a subjective and stupid thing this is. This should not be a thing for the consideration of either government or the courts.

No bidding conditions designed to favor one bidder

All fictional citizens must display their number with their name

The €USSR

Each year the €U collects €90B
and spends €70B
on stuff worth €10B

When we revalue the Yuan... the rest of developing Asia will come up with it mostly.

I avoid advertisers

When in doubt I vote against the candidate that spends more money on advertising, and the companies that advertise the most.

Gridiron is an economic pattern

Just as people benefit from government imposing a gridiron on their cities, so to they benefit from certain types of gridiron with respect to their economy, for example:

- 1/ Standard power input for phones.
 - 2/ Standard printer ink cartridge sizes.
 - 3/ Standard bolt pattern for all 14" wheels.
 - 4/ Standard drive-up charging shoes for electric vehicles.
- Where practical, the Senate should be able to mandate a gridiron pattern on industry, forcing them to (for example) abandon their cheap razor/expensive blades profit scheme.

Novahubs near RVCs

Let's have 42 startup hubs somewhat near our regional voting centers. And all of these locations are sorta supposed to be in the middle of nowhere, with small cheap efficiency rental housing onsite. This is so the people working there are doing the opposite of vacationing in paradise. They are in the middle of nowhere on a personal-life level.

All of these locations are safe from the tsunamis, unlike Silicon Valley and New York city. There will be lots of them, and they will be reasonably close to the governments decision making centers. Thus the Senate will be able to visit and stimulate good start-up ideas that are good for society but not necessarily good for investors

Fast sale / slow sale

All sales listings should have two modes, fast-sale & expensive listing, or slow-sale and cheap listing. This will increase listing fees and improve the marketplace.

Television

- 1/ This should all be satellite based, and access to the satellite is included in our taxes.
- 2/ The channels are auctioned, but only in hourly blocks, so there is a great diversity of content here.
- 3/ There is nothing but public service, news, notification, and educational media broadcast. All the entertainment media migrates to the internet.

China speed

Whatever the fastest industrial process in other parts of the world, we in the free part must match them in terms of speed. We cannot stop tweaking our regulatory system until our industry is just as fast as theirs.

Environmental impact reports

They sound like such a good idea, but they are not, at least not for the smaller projects that America was once based on. A realistic zoning plan is enough.

My business advice for the Mideast

Now the value of transactions and logistics will collapse. Now distributors and third party transaction margins will collapse. Given its location, the Mideast has always focused on transacting things between the three parts of the outside world. Margins here will by necessity (your necessity) get very thin now. So I advise you to stop focusing on transactions. Instead focus on making more and better, and making it all with less human involvement and more robotics. This is an important part of the Mideast giving up Ishtar, for Ishtar is like Hermes/Mercury, a god of merchants and middlemen.

Personal info and government

- 1/ For decades people could find a person's address from the phone book or public filings. This was never a problem. Government can require your address.
- 2/ Government needs to reach you, so you must have an email account that you check weekly.
- 3/ Your DNA can be gotten from your garbage. So nothing confidential here.
- 4/ Your photo or video image can be stolen at any moment when you are in public.
- 5/ Your height and weight are of little use.
- 6/ There is a reality to the world. Let's not legislate against reality.

Medical privacy

Honestly, the short gowns and shared rooms are the real healthcare privacy problem, not people accessing your health records. Really, honestly, nobody cares about this

except insurers and people selling specialty goods. The only people this exists to fool is the insurance industry, which should in fact know this information so they can charge you appropriately for health insurance considering your true risk.

Anti-patents

They are interpreted in an extremely broad way, the broadest way reasonable. And for as long as 5-years on patent filings arising from them.

Loss of patent rights

We can never allow patents to be used to keep products from the market.

Notaries

This function will be taken over by the recorder's offices which will be more common than post offices today. These will have 3D scans of people on their servers to verify identify. You just give them your number and up comes your 3D image that rotates as you turn your head. There is no need for notaries any more.

Land must be used to owned

This is automatic if the amount of land is small, like with flats and even R-3000 density, and even if the person owns only one or two places. However, if you own lots of property and it is substantially unused, this should be expensive with regard to property tax. This particularly if we are talking about underused land near a big city. This land should have to pay so much tax that nobody will want to speculate on it, to buy it for land banking and stuff-up the city. And the county assessor should use a national rating system to assign a percentage that the land to the extent it is unproductive. Also, metaphorically, you can't graze cattle on good farmland and expect that the land is held to be productive by the community. Also, metaphorically, reasonable fallow years are allowed.

What businesses must display by their door and on their website contact page

- 1/ Hours of operation if these are fixed.
- 2/ If they pay commissions on sales.
- 3/ Which standard return policy they use.
- 4/ The store number if applicable
- 5/ An email address

Export lead growth

China doesn't need this any more. Africa and some other places need it a whole lot more. So China needs to balance its currency. Perhaps the UM should say that only the poorest 1/4 of nations may engage in export lead growth under an intentionally undervalued currency and mild tariff discounts.

Arab owned multinational companies

The Plymouth Company (1620),
The Massachusetts Bay Company (1629),
The Company of New France (1627),
The Dutch West India Company (1621),
When did it stop?

Foreigners are welcome only at the first mustering election. Foreigners may not participate after mustering.

A limit to non-profit scale

No entity worth more than 50,000 years wages (\$2-billion) or with annual turnover exceeding 20,000 years wages may be tax exempt. All non-profits worth over this amount shall be broken up or subject to taxation.

Fake Marlboros

The cancer sticks that you get from the government dispensaries are trademark protected. The cancer sticks you get from elsewhere are not protected.

Passing off

It should be considered felony fraud to have a web address, name, phone number, physical address, or similar identifier that leads a significant minority of people to think they are dealing with government or a large well-known fictional citizen, or well known real citizen.

Food advertising

Don't we all mostly have problems with over-eating? Do we really want to let people run eat-more propaganda so they can sell more food. Restaurants and food providers should not be advertising, except in the food, urban resources, or tourism section of the media. There should be no snickers or alcohol advertising.

Cost by weight

Item	price	Weight	\$/lb.
Ford edge SUV	\$32,510	3,959	\$8.20
X-pro 125cc m-cycle	\$937	130	\$7.20
Beauty-rest Mattress	\$1,400	113	\$12.4

Government standard price

This is not just a thing of healthcare. It is also a thing of everything government buys, especially rails, roads, stations, township utility plants, unit placement, railcars, whatever. We have this one kind of H viaduct used all over the nation. Totally engineered and optimized. How much is average? Then all bids are just a multiple of this price... 97.94% or 105.03%, whatever, but everything government does is totally totally standardized, like with our the fast food restaurants. Government should be standardized like this for standard 7-meter rail viaduct?

The tree trimmer to avoid

I was just looking for a tree trimmer. I wound up on Craig's list. I clicked one ad, and then the next and so forth, but about 80% of the time, they went to the same distinctive ad. Avoid this guy. He is specialized in the people who only click one ad. He wants them, because he always gives a very high price, and these one-ad people just agree.

>>>

Where did the directories go?

How do I find an index of all the tree trimmers in my city?
Where did this go?

Google is corrupt

And we can see this corruption by comparing the prices of the landscapers we get from Google and the ones we see driving around the city.

99% of advertising is parasitic

Less than 1% of ad spending is needed to inform the market. The other 99% is a parasitic arms race.
Government should do what it can to 1/ Capture this arms race money as taxes
2/ Offer a complete directory of people providing that good or service.
3/ Make it easy for people to ask for quotes.

What advertising really says

Unless it is a genuinely new thing, the expensive ad campaigns should imply that the company is overpriced, or has bad goods, or bad service. And kids should be taught in school to avoid companies that advertise too much, as they are compensating for some deficiency elsewhere... unless they are new or have something actually new.

costly ads & commission sales

Neither produces anything, and both have significant negative political or social effects. The costly ads create enormous cash streams that are used to create a whole matrix of propaganda media. The commission sales people corrupt our nation's industry with their perks and schmoozing.

Easy clean shoe soles

It should not be allowed for outdoors, running, and hiking shoes to have fine and deep grooves to hold feces and mud and oak wilt fungus, spreading them around. We should have restrictions on shoe patterns. Also, if there must be grooves, they should all be in one direction so the shoes can be more easily brushed clean.

Daily rents

I think all rents should be priced by the day, the calendar day, regardless of the term. This includes hotels as well as places leased for years.

Prison and homeless bathrooms

There are no stalls, and the non-urinal toilets are all Asian style squat-over holes. Exhods get stalls.

Virtual is virtuous

The virtual citizen is the virtuous citizen. Simulated reality is limitless & free.
It's only reality that's scarce.

Undeclared barter will be illegal

It will be like with decriminalized marijuana.
You can't advertise, and you can't have a barter shop or a barter website.

Cars, furniture, industrial machinery.

Generally, whoever is legal possession of something, keeps that thing debt free after the re-apportionment. This does not apply to people managing or guarding business possessions for others.

The forbidden city

Rome dominated the world but most people were poor. There were a few thousand ultra rich people for show, like the forbidden city in Beijing. In both cases the grand buildings were just overpriced excuses for all the money being stolen.

Commission sales people

Commission sales people must declare that they are a commission sales person or they are subject to prosecution for misdemeanor of sales fraud. Those who wear a 2-cm tall C over their heart should be considered as having declared to everyone they meet that they are a commission sales person.

Red = They may approach and they stick to you like glue.
Yellow = They may approach but you can get rid of them.
Green = They are totally passive.

Real estate agents

These are not a supply and demand sort of thing. And there is nothing being created here. This occupation only exists because society allows people to insert themselves here and extract money.

Michael Moore

He's worth \$50-million, yet he blasts Bloomberg for being a "fucking billionaire".

Amazon

This company is based on something that is an aspect of the distribution system. It belongs to the people.

Drum this into kids

1) You want to start your own business
2) You will need money to do that, and it will be a lot easier to get other people to invest when you have your own hard-earned money in the game.

Candy sold as food

In addition to having a sugar tax on sweets. We should also have higher tax on candy that calls itself food, like Lucky Charms cereal breakfast cereal. Let your kids eat cake for breakfast every morning.

RVC's

We want the Senators going around to the various important campuses of government as part of their routine in all 42 RVCs.

Time shares

This class of asset shall cease to exist. The funds are frozen, all management company assets seized. All time shares must be sold within 24 months and the proceeds distributed to the owners.

Dissolving the time shares away

If a majority of the people who own a time share vote to dissolve, then the time share shall be put on the market and sold as a fee simple condominium. This process does not include the management company which shall be considered fired the moment the vote is passed regardless of any contract statements otherwise. Also after this moment, the management company gets no more money at all for any reason at all. The process here involves a majority of owners signing a county approved dissolution request form. All forms of abusive fractional ownership die in this way. Also all condominium association management companies may be fired in a similar way, by a majority of owners signing the proper county documents.

Income Taxes and business entertainment

When we get rid of the income tax, we will be getting rid of our subsidy on fancy meals, prostitutes, trade shows, First class travel, expensive hotels, and much more.

Stockpiling vs. hoarding

What is the difference? Stockpiling is happening long in advance where one's purchase are actually increasing the supply later on. Hoarding is when the thing is needed right now and people are buying lots of it ... just in case. Reasonable stockpiling should be required, but hoarding needs to be discouraged.

Profiting from family, friends and neighbors

If this is wrong, then realtors become wrong.
If this is permitted, then we tolerate realtors.

Private penalties tax

Whenever a non-governmental body penalizes a member, government gets 100% of the money. So when your homeowner's association fines you for something, it doesn't get any more income to steal. Nothing at all.

Public warehouses

The public warehouses with the robotic storage and fetching system, these exist to foster a more granular manufacturing sector. Government should do many things like this to germinate more small businesses.

Base tariffs and Policy tariffs

The ideal tariff level is not zero, but perhaps 5% or 9%, just enough that every nation stays out of every other nation's business unless there is real demand.

How income taxes help predatory pricing

It isn't hard to see that income taxation makes foreign predatory pricing more keenly felt and consumption taxation hinders the effects of predatory pricing. This is yet another reason to scrap the income tax.

Minimized trade

- 1/ Firstly the environment is one of universally imposed consumption taxes.
- 2/ On top of this we have maybe 7% or 11% tariffs on internationally shipped goods, provided the nation is not undervaluing its labor internationally. When this is the case, the tariffs might go much higher... whatever it takes to end the currency manipulation.
- 3/ There is also the cost of moving goods.
- 4/ There is no promise of driving the locals out of business, so nobody does this to increase trade.

Changes to the study of civics and college economics

- 1/ Econometrics should never be more than a cursory part of an education in economics prior to year 16 in school. And except where absolutely necessary, it should be regarded as research methodology in education beyond that time. Econometrics is a thing which tends to block understanding more than it enables understanding.
- 2/ What is called macroeconomics should be called circulatory economics. And this should be a small chapter in the economics education we give to all kids. All they have to know is the model and understand what sorts of things shrink the economy and what sorts of things enlarge it. How crashes happen, and how to fix them. There is much political exploitation of the ignorance here and our democracy really must offer its opinion to the next generation simplest way that works.
- 3/ The advantages and problems of unions must be presented.
- 4/ How it is easier to steal from big groups, and how the people must work together to prevent this.
- 5/ How government corruption works, and how to stop it.

50-years

If you start working at 18 and retire at 68 that's 50 years:
If we automate 1/2 our work, we can trim that to 25-years.
If we automate 2/3 our work, we can trim that to 16-years.

If we automate 3/4 our work, we can trim that to 12.5-years.

If we automate 80% our work, we can trim that to 10-years.

If we automate 90% our work, we can trim that to 5-years.

The materialism arms race

Displays are not going to matter as much in the future.

The personal automobiles won't exist, And everybody will be able to afford a house that's perfectly satisfactory.

Antiques

Antiques are defined as anything over 20-years old that sells for a premium over the same thing if it were new.

These always pay at least the lowest level of luxury sales tax each time they are sold.

Calling Dibbs -or- Napkin packs holding food court tables

In Singapore we see this thing where 1-4 people put a pocket-sized facial tissue pack on a table for 4. Mostly it is 1 or 2 people. Then they go and get food from any of the 20-odd individually-run cafeteria counters. And often, these napkin pack reservations are occurring while other people are unable to find a table and looking around, food on tray. So here we see a dibbs practice that increases scarcity. Instead we should say that in order to hold a table (or seat) one person must remain at that table (or seat).

To me, this rule where someone has to be either at the table or at each seat, it is a great metaphor for land use policy. One has to use land to maintain full ownership rights.

To me, land rights should arise from steady use, but they should also erode with steady disuse.

Also, to me, personal land rights do not come from clearing land, or hunting on land, or even ranching and grazing animals on land. You must at least farm land and you have to farm it continuously (except for reasonable fallow times) to have perfect ownership rights. And here, this is not a matter of planting coconut orchards like so many people have done in Thailand. These people came and cut down native forest and planted coconut palms mostly. Then they did nothing but collect the fruit of their early dibbs payments.

What about the giant factory farms of Malaysia? What about C&H sugar? Are these companies actually worth billions by virtue of their now valuable land holdings? Or does this land really belong to the people? To my mind, any super valuable farmland owned by a farming corporation is up for grabs at ordinary farmland prices by that nation.

Double taxation on renting/sharing

We need to be very careful that our tax system is not double taxing the renting or sharing of assets, and thus discouraging sharing. If the consumption tax on the rental car, or rental equipment was paid at its purchase (or via an annual use fee), there should not be a separate tax for the sharing business and its sharing rentals. Otherwise we are penalizing people for sharing which is in the opposite direction of the way logic directs us to go.

Rental cars

1/ All new vehicles must have digital fuel gauges that show the number of liters in the tank.

2/ If rental car companies sell fuel, the price shall not exceed the street price plus 10%. All Rental car extra fees and fuel sales in excess of this amount are subject to mecot.

3/ Rental car companies shall not offer any commissions or incentives to their employees related to the extra charges system.

Education

School mantras

1/ Interesting stuff learns better. Try to get interested.

2/ You learn best when young, but you don't know anything yet, so you will be a fool for a while.

3/ Eagerly learn while young, or always lag others.

4/ Writing notes and underlining make you smarter.

5/ Think and judge for yourself. Don't get in the habit of having gurus.

6/ Be part of it, add something and be great.

7/ A sense of duty is better than a sense of karma.

8/ Fear and sloth are bad habits. Don't be a creature of bad habits.

9/ Choose always the right path no matter how difficult for custom will soon make it agreeable."

10/ No matter how far you are down the wrong road, turn back.

11/ Don't mistake the limits of your own field of vision for the limits of the world.

12/ The best things in life aren't things.

13/ Avoid advertisers and the well located.

NCES.ED.GOV

This website reports that total US spending on primary and secondary schools 2016-17 was \$739-billion, or \$14,439 per student. Using the average US high school classroom size of 24.2, that is \$349,424 per class. And the average high school teacher made \$60,477 at the time. And higher-end annual rent on a classroom/school sized office building might add another \$10,000/ year. So teacher and room should cost ~\$70,477/year. Where is the rest of the money going? Where is the other \$278,946.8, the 79.8% of the money going? What's is the other 80% buying us? What else is there but special education and waste?

We are paying for 4-kids per teacher

\$60,477 ÷ \$14,439 is pretty close to 4. Maybe we change that to about 12 kids per teacher, with around 5-minutes one-on-one per hour. And sometimes other kids with the same problem will be included. Or maybe that much time isn't necessary. Maybe we have real good edu media and 24 kids per teachers and have 5-minutes one-on-one every two hours on average. And maybe in grades 10-14, maybe it is 72 kids in a class and 5-minutes of one-on-one, or group Q&A per day.

And maybe we need to cut these numbers almost in half because our schools will be open every day for a long time for supervision.

Rules of school money... or

No more school districts

1/ No more than 3X the money for a normal kid may be spent on any special education kid. This is not a matter of justice, but of cost and benefit. Does special education benefit society like the education of normal kids? If not, then it does not get funded. It is hard to believe that it is worth spending more than 3X on anyone.

2/ No more than 10% of the overall budget can be spent on special education kids.

3/ All schools shall be owned and maintained by the county, by the same department that maintains the county's office buildings.

4/ The Cafeterias a made up of multiple competing stalls that are rented for \$1 by a vote of the parents. Per student meal vouchers will be the financing method. There shall be no government-run meal preparation apparatus.

5/ The decision to hire and fire primary and secondary teachers is made by the community, not the government. And here formal education may be considered, but it is not necessary, especially with pre-school kids. People known to the community may be favored simply because they are known.

6/ The material taught is determined by the Senate. The textbooks are all virtual and from the national online textbook library, so 100% of the money we spend on textbooks will be eliminated. Poor kids can be issued EDU tablets.

7/ The teacher salaries are paid by the county. The teachers are county employees.

8/ Academic performance scores will be kept by the county.

9/ The school nurse will be a county employee.

10/ The discipline and security people will be semi-retired cops taking an older person's job.

11/ The guidance counsellors will be either county employment people, some "blue" and some "white" collar. The librarians will advise about academics.

12/ All classrooms and school buildings must be factory made and purchased directly from the manufacturer without any intermediary charges or commissions.

13/ All schools must provide refrigerated meal keeping.

School vouchers

This is a great half measure that introduces competition into places that have until now been bastions of communism that piss away 80% of their money outside the classroom. • • • It is much better if the county provides the purpose built schools and other services above, the payroll, the janitorial, etc. So the county provides these things and the teachers get voucher money from their students directly through a GPS based app. They compete to be interesting and draw big crowds of students to their all-day schools where maybe they pool money. Thus the vouchers combined with the all-day classes and mobile students in a district make for an interesting dynamic. Now good teachers that can draw lots of kids make lots of money, and the money draws good teachers. And there is no conflict of interest here because the teachers are not actually testing/grading the students officially.

Automated education

The computer system provides all testing materials and grades all schoolwork. So all the teacher has to do is talk with small groups of students.

Schools vs. apartment buildings

Maybe the school buildings themselves cost as much to operate as a shopping mall common area per square foot. There should be some sort of formula. How many times more are we paying today?

Paying teachers for engagement time

Maybe we should pay our teachers the way we pay our call center workers... based on engagement time. This starts out valuable for all students and then declines, So all the kids get attention.

School institutionalized

Schools are like busses, 3/4 of the cost is in the driver. And the classrooms are group facilities and they will be day halved, so they will get used all day every day. And it is the education of the next generations, so let's spend some money here... especially for the kids that make the most progress. Let's give them classrooms in the tower and in the greenhouses when that is nice. Give them inspiring classrooms.

More teachers less time each

1/ Kids should be exposed to more adults if we want them smarter. Maybe there is a core guidance teacher and ~15-50 other teachers for the content.

2/ The problematic kids will stand out better. Then we can use stats to make the kids do things like attend mandatory crime intervention programs, or go on police ride-alongs or such.

Textbooks

All schools worldwide shall be prohibited from using any class material that is not available as a free public download.

School rules

- 1/ Billing cycles cannot be longer than 40-days, and the admission/matriculation fee cannot exceed half the billing cycle fee.
- 2/ No school may collect money from people it has not admitted.
- 3/ The annual attrition percentage of all schools and all programs shall be published and audited.
- 4/ Once people are over 14, the school itself cannot expel or suspend students.
- 5/ No school shall ever take more than 20-days to decide on a student application.

EDU security

Secure big brother zones for kids

If kids had their ID verified and location checked more, perhaps on a Face-ID zone, we might be able to give them more freedom and responsibility.

Safer classrooms

Windows are important for having a nice learning environment. So I would not make classrooms without windows, but with classrooms with a 2 meter floor offset with outside grade. Thus a 70cm window sills will be 2.7m (9') above outside grade. This is both hard to get over, and shoot over, and at the same time it is relatively safe to hang from the window sill bar and jump out onto soft shrubs in an emergency exit. Also, all classrooms should have steel doors on steel frames, and a lockdown mode which sounds an alarm and calls 911.

Orwell kids

Our kids are not going to be saying anything political and if they are, then recording it will be more likely to help keep them safe. So why not quietly subject them to Orwell monitoring? Why not put location tech and cams/ microphones on them when they are outside in the township's secure area. Then we can turn them loose as they want and as we would ideally want their environment. Also, this should be a metaphor for internet use. Shouldn't there be some government internets for kids: Pure EDU, 80/20, 50/50, 20/80 and no 100% junk media. But shouldn't our benevolent Sub-Senate help with kid parking?

Kid view phone app

Why not have a phone app that lets parents tune in and watch their kid's chest cam any time, and the nearby pole cams. This will surely keep the kids safe from predators while exploring. Wouldn't that be nice? If we could turn our kid loose in a township secure and let them explore

on their own, safely? And maybe this is only for special breeding townships. Maybe the townships with the political people don't have any monitoring at all. In fact they are regularly swept for devices.

Township police and school

The police inner dispatch is only dispatch to inside the ring road and ID verification. This is located under the township secure area guest entrance. This is at the center of the ambulacrum for rapid response to inside the ring road. The police outer dispatch and main offices are located on the inside of the ring road just outside of garage exit. This is also where the schools and security offices are located. The people/kids entering these places might have to clear police security and metal detectors to prevent weapons at school.

Kids running wild

Imagine you lived in a super safe breeding township where you could let your kids go out by themselves in your township arm once they were 4. How much easier having kids would then be. How much better for the kids too.

- 1) It will be real hard to get run over in a township. Mostly because there are not many roads, and all the kids are wearing transponder/cams.
- 2) Everyone's ID is checked to get in.
- 3) The kids can't enter the boarding platform area without a parent coming along, or the system notified of someone else taking the kid, or the kid given authority.
- 4) It is too far to walk away and all the roads have check-ins for vehicles entering and leaving a township.
- 5) There are not many private vehicles, let alone abduction vehicles.
- 6) The kids are all wearing monitoring bracelets with loco-grid GPS.

Loop schools

Imagine an elementary school that is 1-story, but it is set up 1 or 2 stories for security. The shape is like an elongated paperclip ring of classrooms, with a covered balcony on the outside of the loop all the way around. There is also heavy chain link fence all around, except at the emergency exit/ fire-alarm doors. Thus we have a safe school grounds. Also, the outer balcony ring is the only way to move between classes, and it is one way, with the teachers enforcing the one way rule, or if necessary there are one-way turn-styles like in the NY subway. And as the 40 classrooms are perhaps 12.5m long and 5m wide, the loop is perhaps 500 meters around. (the building is maybe 250m x 25m) And the classes are all 24 minutes long. And they are all sequenced so that the kids are always going 7/8 of the way around the loop. So over 6 hours they are moving 440m 12X, in addition to walking to school. And maybe the path has a few extra loops to extend the inter-class walk. Or maybe we figure out that it is best if kids should

run 300m between classes 4 times a day and walk the rest. . Let's see what works best. But there is little need for PE if the kids are regularly active.

In other iterations we have 15m long classrooms with 5 areas that are each 3 meters wide and designed for say 6 or 12 kids.

Orwell school-buss monitoring

Kids are under total surveillance in the school bus

Halloween: connect the dots

- 1/ Kids going around to houses.
- 2/ People giving them a treat.
- 3/ The practice sounds like "tricker-treat", or trickster treat.
- 4/ The candy sometimes has something bad in it.
- 5/ The practice is a thing associated with evil.
- 6/ People were in a disguise, and it might not have been the kids.

Big brother & schools

All OPK (other people's kids) locations should have multiple hi-rez recording of all locations including halls and closets. Everyone wears a location chip including kids, teachers, staff, and visitors. The parents can watch their kid if they want. The system tracks the kid around. They can also listen to their classes. Also if the kid is saying something in class, and the teacher calls on them, the system records this +3 minutes on either side.

Kid places video

Every kid oriented places like schools and play grounds, and certain school approaches should be video monitored by the county. And kids are often wearing more than one tracker device. And they have a daily school path and itinerary, which the system tracks and alerts of any side tracking on the way to school.

Edu content presentation

Presentation speed

Most people will take the medium speed presentations. Although many will go either slower or faster.

A real education system

It shall prepare all students for at least one physical occupation by grade 9, and two occupations by grade 12. These can be totally physical things that are easy to gain a working ability in, things like taping sheetrock, operating excavation equipment, being a fast food worker, or elder care helper.

The criminal code

I see the new criminal code as a thing that is summarized on a few posters. One poster is for violent crime, one for sex crime, one for money crimes and frauds.

Some mandatory school subjects

- 1) Business, entrepreneurship, commerce and trading skills.
- 2) Government, law, economy, society.
- 3) Numeracy, graphs, geometry.
- 4) Hard sciences.

The Senjinkun should be required reading

All over the world, high-school kids should have to study this document multiple times, so they know about war propaganda.

Innumeracy, gambling and politics

We really should teach our kids about probability more in school. And this is not just calculating the numbers. They should roll dice and draw cards. And their teachers should explain to them three times how the various casinos and horse racing tracks are a just a scam.

Statistics

This should be started at age 10, and it should come as part of a game interface. Here the kids find and trade various things like fuel, flares, and nuggets.

Shop class and design

This is where I would teach design. I would train every kid to read plans and make simple things like lamps, shelves and racks for their homes out of wood and pipe and sheet metal, encouraging mods declared in advance, grading the kids for their work, but letting them get credit for a second class (a respected academic class) based on the quality of their designs.

After school shop classes

What if the after school programs were loaded with shop classes, work training, and hands on experiences, rather than book learning. What if the kids didn't work in some boring factory doing the same thing every day, but they spend 20% of their after school time tasting a variety of jobs?

RS Means & Square foot pricing

RS Means company lists the prices of the various forms of construction in the various parts of the US. Given the insanely high cost of many government building projects, the people would greatly benefit if all high school kids were given a few days learning about square foot prices of the various types of contraction and assemblies. This way of thinking is badly needed by an electorate looking for financial efficiency in government projects.

Teaching kids to keep their line alive

Surely it would not be allowed if schools were telling kids that it was perfectly OK to kill themselves, and lauding the dead kids that did this, or tried this. So why are we allowing schools to tell kids that it is perfectly OK to kill

their lines by being a homo or a transexual? In one lifetime, the result is about 50% the same.

We must recognize that this whole gender-studies field for what it is: a rehash of the "eastern religions that brought down Rome, Athens, and Sparta. Also this entire field of study is matrix, a fake self-reinforcing reality used by the enemies of freedom to bring down free nations that oppose the tyranny of Mideast parasitism.

Word recalls

Let's stop teaching all the stupid words like ectomorph and gerrymandering. These aren't real words. It is dangerous words turned into trivia. Leave them in the dictionaries, but mark them as officially marginalized. And no officially marginalized word should ever be used in the education or testing system.

How I see brain development

I conceive of the human brain as having these parts dedicated to various things like:

- vision
- hearing
- smell
- taste
- hand sensation
- body sensation
- facial recognition
- emotion gauging
- music
- courtship
- justice
- social duties
- numbers
- chase
- reflection
- planning

Sport, music, and emotion media

Too much of this stuff makes us less logical and more animal-like people. Therefore, none of this should be part of any serious school. We can have cardio, but the ball sports belong at the recreation center, not the school. The music belongs somewhere else too. And so does all the acting, theatre, and even literature.

Industrial skills training

Maybe all high-school kids should have to briefly do some factory and service work.

Educational media

All schools shall include the cost of all textbooks and electronic software in their tuition.

Algebra

Honestly, the algebra, for all we ever use it: the kids might as well be doing sudokus or playing chess.

The real algebra

The important part of algebra is understanding how to do graphs and read short spikes, long tails, inflection points, exponents and the like. The algorithm math is a waste of energy for most people. It doesn't matter if non-math people can numerically code their estimate of when events will change. Nobody does this. What is important is that lots of people are able understand the non-linear relationships. And if you need to know algebraic algorithm ciphering, let it be after you get a general feel for the curves you are now modeling numerically and precisely.

Certified writers

The test is really easy. It involves 5 videos of different things, and the candidate is supposed to adequately describe all 5 things. And maybe there are specialties like computer systems, general commercial communication, Product assembly, etc. and maybe most of the people who are certified have never really studied that thing very much.

Grade school law class

Maybe it is 10% -20% morality & empathy media... victim and criminal in prison media, depending on the neighborhood. Kids learn the rules of bullies, and how to stay out of trouble at school. They learn their rights about a life free of violence. They learn about crimes and penalties and evidence, and how much jail sucks. Then as they get older they learn about rules protecting people from sexual touching. They learn how to file claims, the rules of evidence, how to defend yourself against an accusation, and what they lose by filing a frivolous claim. And they go as far as they want in these subjects taking module tests. There is a standard number of modules that people are supposed to complete, to earn a 1.00 progress on the class. If you progressed twice as far as this then your progress will be 2.0 if you progressed 2 1/2 times then your progress will be 2.50.

1st to 6th grade constructs

1/ It should all be based on little paragraph stories with super easy questions at first. "What is the dog's name? What color was Janet's jacket?"

2/ The construct is so important in luring kids to pay attention. Some constructs are about cats, others dogs, other some girls, others some boys. Some streams are about home life, some about adventure, some are animation, some like comic books, some about history. Some set in a picnic... whatever. The wallpaper of the construct is actually quite important for engaging kids.

3/ The constructs and the emotional distractions are supposed to be greatest in kids educational media. This

is where pre-teens see the coolest stuff, and play the coolest games, in the educational media.

Give kids serious stuff first

If they don't accept it, then give them fiction.

From the beginning we should try to inspire kids with a will and custom of learning useful things.

Pattern language book

The way architecture and community planning are presented as a listing of patterns in this book should be called a PATTERNIZING. It might be wise to present many subjects as paternities of patterns that are moomable.

Higher math

I am absolutely a believer in quantity, calculation, estimates, arithmetic, graphs, squares, cubes and even equations and graphs. However, beyond this, I grow increasingly skeptical about the value of math.

Statistics made hard

There is one terribly confusing and hard to learn aspect of statistics that replaces so much valuable knowledge, and squanders so much learning energy that it should be relegated to classes on study methodology for those actually doing studies.

Frustration insensitivity games

Attention extension games

These are a fundamental part of education. Perhaps more fundamental, and more important than actual skills training.

Inductive logic panned

When you study logic, The textbooks warn you about inductive logic. But I think that's only when you have to be 100% certain. When we are absolutely in the dark on a subject otherwise, and we have to grasp at straws, and we have to use every tool that we have, inductive logic is certainly a fine thing.

Pay it forward

This is responding to someone's kindness by being kind to other third parties. This term should be in much more common use in education and the media.

Shop tutor app

This is a video tutoring system for tablets and numbered magnetic tablet mounts. You see video of somebody making things and explaining how make them, and what to be careful of. As you go through your work, you say action and cut to film your critical parts when you're actually doing things than this series of cuts is viewed by teacher who says that to you they're doing it correctly or that you need to change something in how you are working.

Snowflake toughening

I might engineer a bit of hot blow-back at all kids so our schools stop producing so many snow flakes.

Wants and needs

This would be a pretty good module for all kids.

Inspiration counselors for kids

This is like being a librarian except that the focus is on the joy of learning for kids, and getting kids interested in something, rather than finding information or remembering things, or imparting knowledge. Being an inspiration counselor is just about getting/keeping kids interested in learning. These are of two types: the librarian counselors themselves, and their teenage helpers.

Tiny roll models

Look at Eddie Haskell and James Dean. Look how much time they appeared in the collective mind, and look at their impact.

Modding & prototyping

This is a more hands-on approach to learning how to design things. I don't really believe in design and art school. I do however believe in public shops and studios where people can go and make things.

Dimensions

dia·ment·tion = cut-through·mind·action

Perhaps when we teach kids about physical dimensions, we should also add more abstract dimensions like: heat, charge, spin, pressure, age, hazardousness, purpose, cost, scale, texture, color and time, etc.

Contract law

We should be teaching the basics of contract law to high school kids.

When shit happens

It would be a good video game for kids. How do you cope with different problems in a disaster, in a supply crisis, in all sorts of situations.

All is fair

It doesn't matter how we teach kids to work hard.

Accounting

Every high school kid should have to take an accounting class. But not the type of accounting where you have to make entries. This is a class about accounting:

- 1/ Everyone is informed of their basic responsibilities under the tax system.
- 2/ They learn how to bank money, check their accounts, how apply for business and tool loans.
- 3/ They learn the basics of government finances, and how taxes must balance with expenses over the long run.

- 4/ They learn about the power of primary jobs here, in addition to learning about it in other places in the education system.
- 5/ They learn about how government regulations increase cost.
- 6/ They learn when they must use a public bidding board and how to do this.
- 7 They learn about how it is a crime to overpay friends for things. And how to report this. They learn other ways that people cheat with accounting.
- 8/ They learn how to do personal assessments.

Twisted

The definition should include a reference to how this word refers to a course that will eventually have one turned around backwards, or upside down, or both.

The habits of idleness

Do we really want to help establish the habits of idleness in our kids? We want to go in the opposite direction, don't we? I don't understand why kids are supposed to have these months of time off where they habituate to sloth.

Sex ed in class

Outside of government approved video sex education programs, teachers are not allowed to talk about sex, or family, or gender until the kids are over age 18.

Structured people

Which is a bigger problem? That people grow up too structured or too unstructured. Almost nobody is growing up too structured.

Explore the process of discovery

Show kids how it was discovered that one could beat copper into things, how people experimented mixing the metals. How they started beating them into tools. Show this for hundreds of inventions and you will raise the next generation to be discoverers and inventors — not scholars, or bean counters, or musicians, or artists, but discoverers and inventors.

The idea flow zone

As a kid, I would design and make art silver jewelry often with stones. Some was cast, but most was built out of wire and sheet. One day at maybe age 11 I was dropped off at this jeweler's collective in Bennington, I think it was. I remember going into this state of reverie coming up with maybe 30-40 designs. They came faster than I could draw them. Then over the years, I would come back to this state more and more. I would have these design sessions, maybe once a year. We should try to get kids into this idea flow state so that they have more ideas later in life when their abilities are supplemented by greater real-world knowledge. Also, we should ponder Edison's words here: "To have great ideas, have lots of them".

Teachers at all levels shall not:

- 1/ Talk about politics or religion unless it is a religion class. This rule also applies to religious schools.
- 2/ Talk about or suggest violence of any sort.
- 3/ Talk about any sex or gender identity.
- 4/ Talk about socialism, or communism.

Point flashes

When a EVID (= educational video) makes a point, it should have this marker or marker number flashing and the video should automatically stop so the student can read the summary point and press start again.

Speed modulation of E-media

All ubiquitized and widely viewed E-VIDS must be in 3 properly modulated speeds. It is not any real trouble for producers to do their educational presentation in 3 speeds (that can be jumped between).

If practically nobody finishes in the slow speed, then the producer will know to make their presentation faster. If practically nobody finishes in the fast speed, then the producer will know to make an even slower slow version.

The Religion

The Greeks made Homer into religion, a fools religion like gender studies.

Wasting kids time

Poorer kids don't need to learn about literature, or poetry, or theatre, or music. They need a skills so they can make a living.

EDU meritocracy

Glory and kids

Is it ever a thing of physical achievement in the grown up world? Should our little boys be trying really hard to be a better athlete, or a better mind in school? And shouldn't we send a clear message that athletics are totally frivolous and fatuous while science, industry and business are what is important and what will earn you success and status in life?

Mental teamwork matters

Physical teamwork doesn't really

We should do the teamwork building stuff with mental rather than physical activities. And considering how important this seems to be, we should also explain the fundamentals of good teamwork and leadership to everyone rather than just leaving this to physical activity and guesswork.

Ordinary language books

This is a book for young people who are smart, but lack the vocabulary and introductory knowledge to read the subject.

School

I might try to have the smart 15-year-olds going to the same schools as the college kids, with the college kids able to get perks if they have many kids coming to them for advice. The young ones are a bit young but the older kids will pull them up.

Motivated kid schools

There will be these special and much nicer schools for the most motivated and progressive kids. These will see better, faster moving presentations.

Penalizing the kids that test out early

The really bright kids that can simply test out of high school years early should be the first priority for admission to tertiary education. Maybe we have these special more difficult college-prep high-school tests. And this is pass/fail. Then the youngest passers get first placement in tertiary education, followed by older and older test passers until the kids are so old they just give up and get a job.

Education is for the group mind first

1/ We are educating the next generation to be leaders and discoverers. These are the people who will advance the group mind and the economy the most. These are the people who matter most.

2/ As groups, we are quite a bit like Eddie Morra, taking a piece here, and fastening it to something else far away. So diverse learning progress (everyone reading lots of different stuff) is more valuable to group minds than everyone knowing the same pool of ideas perfectly.

A children's meritocracy

Our new school system will rank children by their reach and not the perfection of their memory. And the kids with the greatest learning get rewarded, and there is no way for the children of the rich to corrupt the system. How many serious modules can you complete? That's the metric.

The top kids matter more

It is more important that we stimulate our best so that society can have the smartest leaders possible. The harm done to the others for not making it into the top 10% is neither large nor important in comparison.

Private studios for top students

To raise a generation of scholars, give your teenagers their own private rooms if they get top grades, and as long as they get top grades.

How I see kid schools

1/ The kids that progress enough and follow the rules, and basically pass enough modules, get more cool stuff and get tickets to shows and that sort of stuff.

2/ It is 90% video and e book library, and 10% teacher routing/ pointing/ explanation. And maybe the video is watched in groups, or not.

3/ From say 15:00 to parent collection, the kids at the school get lots of free time to play, or to go to school.

Basic free school dorms

These are much nicer than homeless dorms. 4 people share a square room. The bunks are 90cm wide. On each side of each bunk is a full height 120x90x180cm locker.

Moving around reduces mental staleness

I don't think it is bad for kids to move around. I think it is good, especially if it is a common thing to do. Also, my secondary schools are not places of long term connections and cliques. Instead, the kids are attending maybe 10 or 20 schools a year, with 10 or 20 different groups of people from all over their community. All that happens is people become less bonded to their friends of youth, something that may actually be good for society.

Not so social

Is contact with adults better for kids than contact with kids? Maybe too much contact with other kids growing up makes kids dumb and harms their character. Maybe this is why first born and only children are statistically more likely to be leaders: Because too much learning from young minds makes a person dumber.

My schools and social life

In my single field schools, where kids are not together for very long, there are no reputations, or football team captains. There is no popularity contest either.

A school path

You go to school until you can pass the high school proficiency test. Then you go and work until you are 19. Then you start college. And when you are of school age, you can go and work and stay in your own subsidized dorm room and not only keep all your money, you get a government wage multiplier. Then when you are 19, then you go back to college.

My schools and bullying

If kids are going to school for a couple weeks here and a couple weeks there, then bullying can be quickly curtailed though by one student transferring early.

Bully school

We will have this drill sergeant experience. If you can't finish the day's march, getting taunted and yelled at by the officer all the way, you get that day gets repeated.

Bad schools

The kids that don't disturb other kids get to go to the good schools in the stimulating building with nice landscaping and better things to do.

The bad kids go to these dingy old schools that tend to be a little colder in winter and a little hotter in summer. The food isn't very good. the bathrooms smell a bit. There is more mandatory reconditioning media and the after-school stuff is all old and broken-down and missing. The teachers are also gruff. So for the next few days, the kid goes to the bad school instead of a good one. The difference should strike adults as a bit comical.

Modules

1/ The most objective measure of a person's education is how many serious modules (and verifier tests) they completed.

2/ Modules are free to watch and the totally automated tests are also free.

3/ Some people are just going to do modules all day long, like mothers, people laid up with an injury, prisoners, etc.

4/ Imagine motivated kids doing educational modules 12 hours a day instead of playing video games.

Grayscale education

1/ Education should not be a 12/ 16/ 17/ 20 years sort of thing. It should be a 9/10/11/12/13/14/15/16/17/18/19/20/21/22 years... sort of thing, with no limit to the number of years. And maybe a year of progress is 100 units, so the people with 22 years of study have 2,200 units on average.

More people who don't graduate high school

Maybe I have it wrong about high school about the high school graduation rate. Maybe it should be 20% of each cohort that cannot vote and 80% that can. Maybe it should be up to the Senate. Or maybe we should say that you have to graduate 13th grade in order to vote. And 20% of the people can't do that.

Objectives of the educational measurement system

1/ To objectively measure employee skills thus facilitating the labor market.

2/ To objectively reward learning.

3/ The measuring system should be easy to understand and not be a function of subjective things like sucking up to teachers, and being a good school citizen.

Socialized sweets for kids

Maybe the kid sweets have to be sold with a scan of the kid's ID number and the kid had to eat the sweets in the area. What if the parents only had a limited amount of sugar to give their kids tax free, and most of the sugar came from achievement in school. What if much was made of the harm and obesity that excess sugar consumption causes.

When too many kids have perfect scores

The education system has a problem

If we change our metric to module progress over module memory perfection, this issue goes away.

Library kids

If a kid wants to sit quietly in the library and read, let him.

EDU sports

Priorities in school

They have been distracting us with sport since Greek times. The kids who make the most mental progress should be the school heroes, not the sporto types.

We don't want kids defining themselves by their physical skills at playing some stupid sport. Even Chess should be considered a waste of time. Chess, like checkers, cards and board games are prohibited at schools, even in the after school camp.

Extreme sports

Nobody should be glorifying death defying jumps for kids.

Team sports in School are bad

1/ Athletes are exalted above intellectuals.

2/ Students meet to watch useless sport events instead of meeting to have a group mind.

3/ Kill-a-see'um type sports are kept alive And part of society.

4/ The guys with brain damage from playing too much head-ball... as long as they can pass with a D or better, they get carried along by society and given a college degree. This means that they're capable of thinking if needed, when it isn't really so.

Maybe all the group physical activity needs to be somewhere else and apart from the school. Using personal elliptical, bikes, rowers, treadmill simulators is ok, just no sports achievement, or group sport classes in school. All that stuff happens elsewhere spread out in many different locations without a focus.

The advantage of size

Big guys have a huge advantage in both basketball and football. This seems to be by design, to dull our best.

>>>

Can you all do an experiment for me. Can you get some 6-3 guys that have never played any football or basketball and ask them the same questions as some that have played these sports. Can we see the difference? If we can see the difference, even subjectively and with feelings, why are we allowing these sports that were added to our matrix to make us all easier to subjugate?

And all the money chasing black sports athletes, and all the colosseum glory of "PRO FOOTBALL" and "PRO

BASKETBALL" is Ishtar driving down black America by getting you all to mush up your brains playing "sports". I mean, look at football, it is this impact and tackle stripped of all else. Nobody gets in shape playing football. All you get playing foot ball is injured, injured in the body and injured in the brain. So football isn't real. It is this fake matrix sport added and generously funded by Ishtar so that the infidels would mush up their brains and be dumber and easier to subjugate. And the way sports are presented as being that little extra thing you do to be responsible, that gets so many of our best boys brain damaged. And it makes so many brain damaged jocks.

Lori Loughlin

For what is this person in prison? For lying to enter a make-believe athletic program in a make-believe school? I don't particularly like supporting actors, but there are plenty of real-world crimes to use scarce justice resources on. Why are we enforcing sports crimes or school crimes?

Entrepreneurship, not PE

I would totally eliminate physical sport from schools. And maybe in addition to doing a lap between each class, they also have to do 5-minutes on a stationary bike. And surely this is more activity than kids do today at school.

Kids should not sing together

At least with athletics they get physically fit.

EDU other

How to do nobody fails in school

Some people make a great deal of progress, others do not. Whatever level of education they pass in the government tests that is their education level.

Tenure and complacency

Anyone who has been to college has seen the complacency and arrogance of ten-year-old professors.

Paywall feudalism

Think of how much stronger the group mind will be without paywalls. How dare our fake colleges have pay walls for their research!

Clones of el genius PhD

To keep people from getting one very particular mentor all the way through, we should restrict grade 15-20 mentors to 6-month's of exposure.

Applying to a school

No school application process shall have more than a 30 day lead time.

How to get professors cheap

If government removes the testing and certification function from our adult education (college) system, then we don't need to care about students having sex with teachers. Then teacher pay will return to normal, or even below normal. Also, if we don't remove this function, then the prohibitions on teachers having sex with students should only apply to educators who grade and pass students and administer schools. It should not apply to those who visit and lecture, and contribute without grading or administering. So people working as tutors, visiting lecturers, and teacher's aids can have affairs with students over age 18.

Outsiders on campus

I once went to UCSD to show some people part of my film and tried to give away some USB drives with my message. Literally within 30 minutes, I was approached by two campus police officers and questioned. Here I note the way both were holding their holstered guns with one hand, one continuously. This is the way of religion and tyranny, not the way of an open society. Colleges must never be allowed to isolate themselves like this. they must go in the opposite direction and be open to outsiders.

New mandatory primary/ secondary school schedule

All schools must be open for 12 hours a day, 360 days a year except for construction. The school year shall be organized around 36-day tenths of years. No school shall bill for more than one teneth at a time. No school application process shall take more than half a teneth to review.

Public school refrigerator lockers

In public schools, then we should have adequate refrigeration for people to bring food. Let the kids put their 4-digit number on their lunch bag. Then they hand it through a walk-up window to a person in a puffer jacket inside a walk-in refrigerator who puts the lunch in the correct cubby or group tray. Then at lunch, they pull the trays out. and the kids collect them. And maybe they also get to store microwave dinners too.

London's natural history museum

Here is this giant building on its own block, with this grand facade, this grand entry, many grand halls that look good in illustrations and photos. But then there is this collection that is just good enough not to provoke outrage. This is a tremendous example of how budgets are wasted.

Museums

1/ Museums should be free to enter so we maximize use.
2/ Museums should not have this sort of one-way IKEA road where people march from exhibit to exhibit in a pre-determined path.

3/ There should be more seated virtual exhibits. Maybe 50-90% of the time should be in a virtual experience seated and 10% standing. We really should optimize the period lengths. And perhaps movement level is another "learning style". Maybe some kids need 8% movement and others need 28% movement class.

4/ Museums should not bid against each other and drive a price bubble in museum-quality objects. They should form a league, a monopsony, enabled by the power of government condemnation to buy up everything remarkable, giving Ubiq status to the artists and discoverers. Then all the objects should be replicated and made available to the entire museum system as well as the virtual internet.

5/ All the good stuff should be replicated. Thus indistinguishable replicas of all the great art is in every city.

6/ All museum exhibits have tell-me-more QR codes for a number of follow-on directions.

7/ Crowded museums like the London Natural History museum should be open from 7:00 am to 9:00 pm.

8/ After 3:00, everyone has to whisper in a museum.

9/ The museum does not go at the center of town. It goes in the periphery. Thus the museums look like the exhibition halls at the Del Mar fair, or a trade show hall. Maybe there is a standard floor size, say 3x5 meters, that can be raised on trailer screws and put on a trolley and replaced with another panel made elsewhere.

Exploratoriums

There really should be more of these for the wonder the bring. Also, we should generously reward the best new exhibits with Ubiq awards.

Harm and danger entertainment

1) The producers of videos and games should be financially liable for the harm and risk they cause to their employees and volunteers.

2) The Senate shall have a particularly low bar for stigmatizing stunts, pranks and videos where the employees or volunteers are either harmed or put at significant risk.

3) Those who sponsor or otherwise fund stunts, pranks and risk videos for publicity may be held liable for the harm and risk they fund as well as the secondary harm caused by copycats.

4) Videos where people are physically harmed in any way, including pranks cannot use the reward systems.

Birthday parties and gifts for nothing

I don't think it is good to have this day, once each year, where you get to be a narcissist. I think it is a bad idea for child development.

School only devices

What if we have kids tablets that only allowed .edu TLDs.

Kid phones

The kid's devices are controlled through a parent web interface. The parent uses a panel on their phone to manage the kid's settings. There are multiple settings controlled by the parent device, like:

1/ Night, everything mostly off.

2/ Grounded. A bit more functionality.

3/ Most communication apps and all games are off.

4/ Use rationing.

5/ Mostly unlocked.

How to make the Rumi easy to manage

1/ Start out by identifying the smart ones with IQ testing. Here we must recognize that the data is highly dangerous, just like with voting machines.

2/ Make all the Rumi sit and listen to years of tedious lectures.

3/ Get the Rumi to play head-ball along the way, preferably 2/3 forms of head-ball in their seasons.

4/ Get the Rumi thinking it is cool to start drinking and taking hard drugs at a young age.

5/ Get the Rumi doing fatuous things singing and dancing to get their young pliant minds developing low branches with accessible fruti.

Interchange colleges

A continuing education campus might go outside the Interchanges so that people are more likely to stop for continuing education on the way home from work. Other than that it's just hospitals in emergency services it go with the interchanges.

My schools and colds

If kids are going to single classroom schools of say 40 or 80 kids, childhood disease will less of a problem than when they go to schools of say 500 to 2000 kids.

Gay people and kids

They may not work with other people's kids, or hang around in kid-oriented places, or do things to meet kids of either sex.

2nd degree incest

This is when one is not related, but was previously in a parent or teacher role for an extended time with someone under the prescribed age.

Playground slides

Make them as narrow as a 6-year old needs, and no wider. Then instead of the drop and the end (which probably reduces human IQ worldwide by some measurable amount) Instead of the drop at the end, the kids slid out onto this 35cm tall steel troweled concrete curb that is a bit wider than the slide. This has a 5cm radius.

The Senate should audit all college degrees

The Sub-Senate should audit all academic titles and cancel these when it finds that any of the following conditions are true:

- 1/ The school was a joke.
- 2/ The subject was a joke.
- 3/ The thesis was a joke.

Academic verification system

We all spend 1/6th to 1/4 of our lives in this all-day academic training and competition. Then once we are out, we go around asking people socially and at work where we went to school, or what degrees they have. And people often lie about this. Why is there not some government IT system to guarantee the accuracy of people's educational and training claims? Why can't we go to the recorder's office and look up the training or work experience... (or overall academic progress) of the people we are hiring?

Babies

Childbirth

Relaxin counter-agent

Can we block or counteract this in pregnancy? Does it have any benefit except in natural child birth?

Maternal confinement

The better-off Chinese traditionally did this, and there is some reason for it. Perhaps it should be recommended that from just before month 8 of pregnancy until say week-5 of childhood it is better to avoid crowds and practice social distancing. Maybe the baby showers happen after this time and the family visitors are limited and all wear masks. It would be interesting to test this among a few thousand babies and see if it is correlated to a reduction in any health problems later on.

Mothers with early dilation

In order to maintain the generous pregnancy and child benefits, these mothers must either wear a monitor so they remain flat at home and not even cooking or checking on their other kids. If they can't do that then they will have to go to a special premature risk facility where they must remain flat and eat in bed during the end of their pregnancy. And due to the 3-weeks to 90-year payback here (1560-fold), and the stupidity of the problem, these breakfast in bed dormitories down the elevator from the maternity hospital should be free, along with sibling care.

<preterm graph>

Premature babies

The US line (yellow) is hiding behind the orange line. But what is not shown here is that from zero to almost 22

weeks there is practically no chance of survival. At week 22, that rises to 10%. Then by the 23rd week, with treatment, the chances of survival and a normal life rise to 55% in the US. then by week 25, survival is at 80%.

>>>>

We must have a cut-off for healthcare benefits for premature babies. Without this, many emotion driven parents will spend millions of dollars of the system's money to save the live of a child that is likely to need lifelong care. Therefore I propose the following rule be used:

>>>>

Where the survival rate without severe impairment is deemed to be less than than 50% for that newborn, based on its age, weight, and incubator progress, there should be no payment of healthcare benefits, or insurance monies, public or private outside of basic delivery costs. Thus today, and until medical technology advances, the cut-off will be around 23 weeks. And this is the point where half of the children will not live normal lives I might add that the Over-Senate should have the power modify the 50% point to anywhere between 20% and 80%, however it should be required to consider the estimates of lifelong cost of each life saved or not saved in this determination.

Newborns

To make people smarter

We should invest more in infant media,

Mixed mother's milk

If the baby gets immune benefit from the mother's milk. Is it good if say 6 or 30 women share milk?

Is there a difference in the milk?

Do some women produce easier to digest milk than others? Why is that?

Breastfeeding

When babies get hungry, they should be fed right away. Why make them wait? And why is society discouraging breastfeeding in any way at all? Therefore, women everywhere should have the right to breastfeed their under age 2 children in public if they have a cloth to cover. Also, there should be no penalty for momentary nipple exposure caused by fidgety babies.

Incubator changing tables

These have thermostats and heaters and fans and hair dryers and automatic breathing monitors.

"It's not food, don't eat that"

Anything that goes in the mouth gets this response. Also, I don't think that it is such a bad idea to have a few flavors of yuck spray for things that kids put in their mouths. And maybe all baby toys should be flavored with yuck as well.

And meanwhile the parent is saying "That's not food" every time the kids puts one of these things in their mouth.

Rattle, track, grab shake.

This is a game to play with infants. Shake a rattle like an air drumstick. Do this about 60cm away and directly in their view. When they look at the rattle, move it a short distance away and shake it again maybe 2 seconds later. Then repeat until the baby starts grabbing for the rattle. At this point you give the baby the rattle and shake it in their hand a couple times. Then they often keep moving when you let go and they see how their efforts at coordination have a result, that they have made the rattle sound.

Baby skull accelerometers

What if the way baby motion causes them to stop crying causes brain damage. We should monitor this motion and see if it correlates to any indication of brain damage.

Cobblestones and brain damage in babies

Pram use on cobblestones should be studied to see if it causes brain damage in babies.

Infant car seats should be transverse

This is the safest orientation.

Mothers with ADD & prominent Adams-apples in babies

If there is a correlation, then this appears to be inattentive moms letting the baby's head flop back.

Yuck spray

I think we need "Yuck" spray. This stuff is harmless, but it tastes bad, and it also mildly irritates the nostrils and eyes if they are touched by the finger tips. And if we are going to reintroduce beneficial bacteria into the lives of kids, let it be controlled and according to a measured regimen. Also, with respect to the immune systems of kids, I would think it more related to going out in public than being a matter of oral/nasal direct contamination.

Your kid's posture

1/ When kids are very young, hold them horizontally. Don't hold them upright for too long. Even upright body carriers and car seats are perhaps a problem for the youngest.

2/ Don't put the tiny ones in situations where they are looking up at you a great deal as this may deform their neck.

3/ the side impact guards on car seats may cause neck distortion from craning.

4/ Keeping your kids active will keep them strong and standing more upright.

5/ Swaddling may also cause posture problems.

Anti-dyslexia music videos for babies

These are songs with lots of confusing sounds that help kids to learn their sounds. And maybe there are 40 age anti-dyslexia tracks for each sound for the age group.

Natural childbirth no: Nursing yes

1/ Caesarians births have a higher IQ in this study: <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC3093169/> The supposed value of vaginal bacteria and the mothers feces smeared on newborn babies is hard to believe. But if it is in fact beneficial, it can be easily simulated. So this is no reason to have a natural child birth.

2/ The skull distortion that newborns undergo in vaginal birth is probably not a good thing. But if it is in fact beneficial, it too can also be easily simulated in a controlled way

3/ Nursing involves lots of time and contact with mother. Also, some babies seem to have a very strong preference for the real thing over a bottle. Nursing is hard to simulate.

4/ Women can do what they want, however they should probably think that Caesarians births are better for the baby.

Curved spines and young bones

Holding soft-boned newborn babies upright is obviously not the cause of horizontal spinal distortions, but maybe it tends to exaggerate them. At what age is it safe to to carry a baby upright, and for how long? Do a twin study. One twin is held upright earlier and walked around for longer than the other. Does this produce a difference in height and snake of the spine?

Buck teeth

This is from giving kids bread and spread and them ripping the bread with their front teeth while their palates are soft. It is a sign of bad parenting not poor breeding.

Do you see the baby?

Ask your kids this every time there is another baby, even if they are both newborns. Do you see the doggie? Do you see the cat? The bird? The lady?

Parents should also talk about the baby in the third person. Both look after you say baby ... then talk directly to the baby. This will help the baby learn language skills and to understand their place in the world better.

Do baby chimps throw things down like human babies?

Toddlers

Call it playing letters and playing numbers

"Do you want to play letters?" Be enthusiastic, so it is fun. The game only goes for 1 to 5 minutes before the attention span is gone. So try to "play" a few times a day.

How to teach your kids letters

1/ Match a letter to every utterance your kid commonly makes. It is important that your kid like all the things: M is of course for mama. B is Baba (grandma) T is Tata (grandpa), I is for Ice cream, D is Drr Drr the baby word for go and machine, and so forth.

Go get a wood letter puzzle from Target and put the board away. Then go one letter at a time. It is important that the letters be physical things instead of marks on paper. Show the M and say mama. Then 1 or 2 other letters. Start asking for the Mama letter and lavish praise when baby picks up the right one. Say nothing when baby makes a mistake. Kids can recognize letters much earlier than they can say them, so start with letter recognition. We started doing this at 17 months and by 20 months baby could recognize nearly all the letters (except H).

How to teach your kid numbers

Whenever you go to the swings or you are playing peekaboo with a blanket (or some other fun thing) count 1-2-3-4-5-6-7-8-9-10 before you start. This will make the kid associate numbers with fun and make it easier to learn numbers. Never count like so many people do because their kid is not behaving and is about to be punished. We were doing this at 6-months.

The baby chair trick

Wherever the grownups sit, baby should have a scaled down version in the seating arrangement in the family circle. The trick is that mommy/daddy are reading paper books and all that stays around baby's chair are baby paper books. This and the toy area is around the back of sofa out of mom's sight. If Jr. gets up or peers around, mom is there to see, but if Junior sits down to play with toys, mom is out of sight. Thus baby chooses to sit with mom, and do what mom does, namely looking at books and being social.

Letters and numbers in the park

This is when we make 90cm concrete letters for the parks. This is so kids can walk down the alphabet path or the number path. Also so they can find the jumbled letters in the jumbled letter/number fields. Or maybe the characters are bigger, so they seem important to the little ones.

Monkey math

These are cartoons where 3 go in but only 2 came out, so someone must still be hiding inside. It is also when you have 3 cookies for 4 friends, and similar situations. This should be maybe 5% or 10% of baby cartoons.

Matching cards up

Matching picture cards are good for helping baby's mind. But leave them face up so that you work on seeing and thinking rather than remembering.

What does the doggie say game as a developmental benchmark

How old are they when they can answer the what sound does the animal make at a certain proficiency for say 4 or 5 animals. I bet this will be a useful early development benchmark. We should try to figure out more of these benchmarks.

What does the doggie say as instinct?

This game may be hard coded in our DNA. But I don't think it is a communication thing. I think it is that we are hard coded to make animal relaxation sounds like we do to dogs, cats, horses, etc.

Prams suck

They make kids lazy and passive and less curious. Try to keep your kids out of a pram as much as you can tolerate.

Baby prams

People talk about how babies have so much energy. It's funny the way that people don't make their toddlers walk and run more.

Harness leashes for babies

This is a good way to get the babies walking earlier without suffering fall injuries.

Teaching kids to read early

- 1/ Kids can learn how to recognize letters before they can even speak. And once they are making a sound, you can associate the sound with the letter.
- 2/ Once they learn their letters you want to go over them again and again, making it instantaneous for them that a given letter means a sound.
- 3/ Get wooden letters as a puzzle toy. Start with only a couple letters: M for mama, B for baby, G for grandma, S for sssittssss, U for uncle, etc
- 4/ Several times a day you should be asking "want to play letters?" Tip: letters are more interesting hidden in buckets, boxes, and cabinets.
- 5/ Make saying and recognizing an easy game. Ask where mama is (the M letter) among some other letters.
- 6/ You want baby reading a few words before you introduce the page of words.

How to get kids in mimmic mode

It is very important to be able to get your kid to repeat what you say. I recommend this:

- 1/ Mom keeps saying "sssitsss" for breast feeding time, so baby knows what sssitsss means.
- 2/ Once baby understands "sssitsss", dad says to mom: "Mommy say "sssitsss"
Mom says: "sssitss"
Mom to dad: "daddy say sssitsss"
Repeat.

Then mom to baby: "baby, say sssitsss"

Then dad to baby: "baby, say sssitsss"

Then, whatever baby says, go yay and be happy and celebrate one of baby's most important first communication steps. Don't worry if they are wrong, eventually they will mimmic the sound perfectly.

Use the baby's sound "vocabulary"

Listen for the sound is your baby makes. You can combine those sounds, but it's hard to teach other new sounds. These seem to come as their minds boot up.

Babies drinking from cups

Make sure their chin is tilted a bit down below level. This keeps them from choking. You want the cup less than 1/4 full.

Reading and books

1/ Books should be fun. Start by looking at pictures every day and saying the name of all the things depicted in the pictures.

2/ If baby wants to look at books alone, then let baby, because this is your actual objective. But if baby is not looking while alone, then you should spend time with baby looking at books, and hold baby, and have fun looking at books.

Want to play with books?

Don't call it reading. Say "Do you want to play with books?"

Spot the thing in the book game

Get a picture book and ask:

Where is the elephant?

Where is the baby?

Where is the airplane?

When junior spots this thing, praise them so they develop this mental pattern where finding things in books is enjoyable.

Count spoonfuls of baby food

You can also count spoonfuls of baby's favorite food 1-10. This will also help reinforce an enjoyment of numbers.

Old McReader had a farm

A-E-I-O-U. With an A-A here, and a n E-E there. An I-I here and an O-O there... A-A, E-E, I-I, O-O, U-U.

Play pens

Kids might have two play pens, the big nice one that mommy joins the baby in, and the small rotten one that is used when baby is bad.

When kids get sick

Maybe we should ask them if they ate something they found on the floor if they have a problem with this.

Encourage practicing

When your kid is going up and down a step, or doing any new skill repeatedly, let them enjoy this, for it is a good thing to become accustomed to enjoying.

Toddlers picking and popping berries

There are lots of dry berries that can be picked and thrown on the ground, berries that make a popping sound. It is a good thing to do this with baby so baby has an early way to work at some repetitive task with a reward. Once they have mastered doing berries one by one, show them how to do a couple at once and m it a thing to race through as fast as possible like a game.

Find the marbles

This is when you take a few brightly colored marbles (too big to choke on) and hide and baby has to find them.

Too much jumping

Try to keep your kids from jumping too much. Tell them it is dangerous for their legs and their brains.

Socialized kid's stuff

If we are going to be sharing baby equipment, we can spend 10-20X more on equipment.

Infants on audio

I think there should be these infant channels that people play for their kids in the background. Newborns have great hearing and it doesn't have to be very loud, just people having conversations and exposure to all the sounds of Euemi. And maybe they get taught numbers and letters by ceiling projector.

pre-school age kids

Pram school

This is where the babies too young for day-care/ preschool are brought in their prams with mom to the school to get familiarized. They go and listen for a few minutes and then they get a snack and are let loose among the toys for a few minutes. The schools charge a subsidized cover charge for this as it brings in new business.

Baby school laugh tracks

There are audio recordings of one or two kids laughing uncontrollably in the distance from time to time and when new kids arrive. These pram-school events are supposed to be a "house warming parties" the school / daycare and to make it seem like an interesting place that the kid is pried away from at first. The idea is that we want kids to start out feeling like school is this interesting place that they can't get enough of.

Grownup contact make kids smarter

The first/only child success increment obviously comes from more interaction with an adult dominated culture. So it is important to realize that it is better for kids to spend most of their time with productive adults than other kids at play.

Baby money and counting

Maybe we should use mock \$1 coins for early education purposes. They are stainless steel with a variety of interesting designs embossed into them. They have an attractive design, so they want them and want to collect them. We give these away for reading, and when the kid is good or hard working. They are too big to swallow. These are used by the kid to buy some treat like a toy, or ice cream, or a baby coin-op ride, or entry to the petting zoo, or an amusement ride, or whatever. Baby gives the mock coins to the cashier, who then hands over the goodies (with the parent paying after and getting the coins back). Or baby puts the kiddie gettone in a ride. The thing is that the kid sees early on that money is this universal solvent that is to be valued because there is never enough money to buy all the goodies the kid wants.

>>>

Once this is instilled, we can play games with savings, like mock accounts where the "government" (really just the parents) is using some shame website that pays 100% monthly interest on deposits. This to instill a process of saving and deferred enjoyment.

>>>>

We also want to get kids counting their precious gettone, and also seeing that different activities pay them back more, a process that will help them to grow into more effective adults.

Free-range kid collars

4-direction video and audio, GPS, can't be removed except with key or electronics, 911 button for parents to press, audio to parent.

Excessive freedom

All the stuff about accepting your kids no matter their sexual preference is only a step or two away from the west going down the tubes just like our ancestor democracies in Athens and Rome. This thanks to "excessive freedom".

If you want your kids to have kids

- 1/ Emphasize an identity as a multi-generational line of people, rather than and individual.
- 2/ Keep talking about your kids eventually having a family and kids of their own as they grow up. There is nothing wrong with doing this a few times a year.
- 3/ Do not show any regret about having them.
- 4/ Gently push your kids towards heterosexual roles and gently away from identifying as the opposite sex. Don't push so hard that they get reactive, but push.

5/ The slim sexy Bar•bie dolls heralded a generation of people who did not have kids. Sexy/thin, glamorous children's dolls should be eliminated from the market and tossed out by all parents. These confuse little girls in a foundational way about their need to reproduce and make more infidels.

6/ Give your kids dolls that are babies and not grown women (especially slim women) or animals or creatures. This goes for your boys too. Boys can have grown man dolls, or baby dolls. Girls should only have baby dolls if you want to have grandkids and keep your line alive.

7/ Don't be indifferent if you want grand children and continued issue through your generations.

Reproduction

Hygienics and hygiene

These words should be about the hugely important topic of genetics, and not the mundane process of keeping things clean and germ free.

Stop calling women baby

It is really much more important that we use this word for kids as they learn to communicate. And I do think it is by design that the words baby and babe are so over-used in pop music.

Sex guilt

The idea that you should not have sex was added by people concerned with keeping good infidel men from conceiving more infidels. Never ever have sex with prince charming. Always go home at midnight or you will not get your glass slippers.

The easier we make it to have conforming children, the more difficult non-conforming children are.

Does guilt makes women less fertile?

Respect the single mother

She didn't make a mistake, she chose right. She chose quality over commitment. Respect her for this.

Vaginal mucus and fertility

They constantly secrete mucus that due to symbiotic bacteria turns slightly acid over time. This acidity seems to have evolved to reduce the chances that rape will lead to pregnancy. Now during intercourse the older and more fermented/acidic slime comes loose and is expelled from the vagina. This lowers acidity and increases fertility. We should figure out how much more likely to conceive women are when they have 5, 10, 30 minutes onward of intercourse. It is probably a typical diminishing returns graph. Also, perhaps we want to use PH test strips and perhaps PH helper lubricants if we are trying to get pregnant.

Sire mom services

Many will stay in special privately run service apartments specially designed for their level of maternity. Gestation, pre-birth, post partum, infant, etc. The kid stuff stays, and the furniture stays for the next family. There is a cafeteria and care for slightly older siblings. The clinic and after hours nurse is in the lobby. The Sireage payments are highest in years 1-2 and then they taper off as the child becomes more independent.

How heterozygous is human intelligence?

What if I had to have 4,096 sons before one would be as smart as me by birth? And that is only 12 genes. If there are 24 primary genes involved, I would have to have 17-million sons. Then again, the magic combo might be switched on in me and half of my children might get it.

A 1-child+ variant

Another possibility for one child plus is that women can only have one child at a time in their home, and say 20% home from school for the older sibling is considered out of the house.

Generation-V

The people born in the 2020s and 30s will be 1st generation/ "Gen-1". Those born in the 40s and 50s are generation "Gen-2" and so forth.

Why abortion must remain legal

1/ Think about how some Mafia drugs are both highly illegal and available worldwide. How will our attempts to restrict abortion pills be any more effective? So my first point is that even if we make abortion illegal, the pills will still be there. So making abortion illegal will stop few determined women from getting abortion pills on the black market.

2/ We don't want women endangering themselves with 100% DIY unsupervised pill abortions. This will kill women.

3/ What right does society have to say to women: "your child is damaged

not pregnant, now you must keep the fetus and raise the child." either that, or you must have an unsupervised pill abortion. We have all these safe medical techniques for terminating pregnancy. What right do we have telling women they may not use them?

4/ Unwanted children are not good for society. The first Freakonomics book talked at length about that.

5/ Making abortion illegal disproportionately affects the poor, the ignorant and the victimized, so it is unfair.

Late term abortion

Some nations might alter my prototype constitution to say something like: "After 25 or 26 weeks of apparent gestational age, the point where the baby becomes

mostly viable outside the mother, all abortions must be for a reasonable medical cause approved by a Senate jury. This cause may include either a newly discovered major defect in the child, or an issue with the mother that more than doubles the mother's background childbirth death risk."

I think that free societies should back off here, and give the mother the maximum choice reasonably possible. The baby should be regarded as entirely hers, entirely part of her unless it can live a normal life outside of her.

How to prohibit late term abortion

Some nations might alter my prototype constitution to say something like: "After 22 weeks of apparent gestational age, a point where the baby starts to become viable outside the mother, all abortions must be for a reasonable medical cause approved by a Senate jury. This cause can be any life threatening issue with the mother, even a mere doubling of to the background childbirth risk of the mother. It can also be any major defect, or a trauma, or a disease like Zika that will lead to lifelong care." But society really should back off here, and give the mother the maximum as much choice as reasonably possible.

My abortion policy goal

It is to make it as easy and safe as possible for women to:

1/ Avoid having a child with a man she did not want to want to have a child with.

2/ To fully avail themselves of modern medical technology and terminate their badly damaged offspring. For how can society force people to care for their badly damaged offspring?

3/ Protect fully formed babies for harm.

<Premature survival rate.png>

Damaged at childbirth

There are lots of babies that simply come out too early and are damaged for that reason. There are also kids damaged in childbirth and others that have damage that is only discernible after birth. How can society force people to care for their badly damaged offspring? We must give them the right of "exposure".

Abortion clarity

1/ Up to a certain point in the pregnancy, all that should matter is the apparent gestational age of the fetus.

Women have an unlimited legal right to obtain abortions until this point in their pregnancy.

2/ Where is the point? Certainly we can't allow the killing of healthy kids that are past the 3rd trimester (26.5th week) and able to survive outside of the womb. Maybe with some jurisdictions it might be 23 weeks, or even maybe 21 weeks in decades to come.

3/ After this legal tipping point in the pregnancy, all that should matter is the condition of the fetus/ baby. And the termination rights on the grounds of birth defect should

err on the side of government hands-off for parent petitions. They should also extend beyond birth for a few days so people can run tests and so they have time to think.

4/ We must have juries of Senators, and birth defect experts that also make official decisions. Someone must make the decision that the newborns are a lost cause. The parents can't be relied upon for this.

Another important aspect of women having children young

If the women all wait until they are 29 to have kids, it is much harder to use the success of their kids as an indication of the mother's exceptionalness. This is because the kids are only 10 years when mom becomes infertile. However if mom has a child at 18, then the kid is 21 when mom becomes infertile. So this is another way to select good females that are given the opportunity to be public egg donors.

She can produce smart sons and smart daughters.

Women insisting on sexual fidelity

Right or wrong, everyone must admit that this causes:

- 1/ Our best men having fewer babies.
- 2/ Our women compromising on the men they have kids with.
- 3/ Fewer infidels overall.

Human eggs

A woman's eggs, if removed from her body remain hers, and her sole domain and property, regardless of whether they are fertilized. Even if they are fertilized, nobody else shall have any say over them. We do this so more women will harvest their eggs and perhaps later either use them or give them away. Also the sale of human eggs by a woman shall not be taxed.

Sperm donor health problems

Some of us take a while to figure out the idiosyncrasies of our bodies. The right thing to do when you are a sperm donor is to make a complete listing of all issues, allergies, preferences, tastes.

Pregnant & Under age

When females under the legal age for marriage become pregnant, they may marry the biological father of the child, or another person of their choice. Also, if the biological father is under the legal age, he shall be allowed to marry the mother of his offspring. However:

- 1/ All such under-age marriages due to offspring shall be subject to unilateral annulment by the under-age partner(s) until they become of age.
- 2/ This marriage is provisional and it is subject to the presence of the child. If the child is aborted, or it is given/ lent away, even to a relative, then the under age marriage shall be considered void.

3/ Under age mothers, or mothers-to-be may only marry one person.

4/ Different rules may be applied to pregnant females that are under age 17. Different rules should be applied to pregnant females that are under age 15.

Big Brother for kids

If kids had their ID verified and location checked more, perhaps on a Face ID zone, we might be able to give them more freedom and responsibility.

How to have 4 only-children

One at 18-19, and one every 5/6-years. So the children are born at 18, 24, 30, and 36. With three only children, one can begin later, at say around 24 to 26.

Compartmentalized life

We are told that we should not compartmentalize our lives — that we must only have children with a person we have a lifelong marriage with. But why not? Why can't women get their children from better men that they hardly know? There is nothing wrong with this. In fact, this is what will stop the creeping idiocracy.

Man or child first?

What's more important: a woman's love for her kids or for her man? Which lasts longer? Will the kid ever find another mother the way men find other women?

Don't compartmentalize you dumb infidels

The liberal media repeatedly reminds us that we are not supposed to compartmentalize our breeding practices. The media says children should only be the product of romantic love and lifelong partnering. But what if women didn't pick their baby sires based on love. What then? Don't they all pick the best men and end the idiocracy that is the source of all human subjugation?

Don't worry about the sire baby boom.

- 1/ We must have the smart people to counter the idiocracy.
- 2/ We can use the extra hands.
- 3/ It won't be that much of a burden on the planet.
- 4/ In just a few generations we will be hungry for diversity.
- 5/ We should anticipate that the poorer the place, the greater the sire baby boom will be.

Nap-time work

This is a category work for mothers who want to work while baby is sleeping.

Historical

History should be ruled by the truth

In all matters of history, the truth should rule. Not national glory, not loss of face, not religious glory, not having an entertaining story, and not patriotism. Only the truth should prevail. And it should be considered a shameful thing to hide the truth for any of these silly reasons.

Sumerian god Marduk

Marduk was the city god of ancient Sumerian Babylon, and the Babylonian king of the gods. Marduk managed justice, compassion, healing, regeneration, magic, and fairness. He is sometimes referred to as a storm (war) god and a god of Getting food for the Middle East.

Imhullu is a wind (hot air/ talking/ matrix) weapon used by the sky god Marduk (of Babylon) to harm the water goddess (of the outside world) in the Mesopotamian story of creation.

Ishtar industries

Fostering and harnessing the power of human desperation and pro•verti for over 6,000 years.

The great whore

This is the free market in trading-house symbolism. This is the enemy of Ishtar.

The Bronze Age collapse

What a thing that Ishtar held the world in the Bronze Age when It would have naturally entered the iron age... and only because the Mideast monopolized the tin to make the bronze. I tell you, oil is just such an essential thing. And it is holding mankind back in the same way. And it is just as stupid.

Q: What do you get when you cross the films Logan's Run with The Time Machine?

Answer: A likely historical past.

Sparta came from Mycenaean Greece

The Athens are the outsiders that sprung up next to the wall.

How can it be?

We all know the legends of Atlantis or Atlantic civilization that was washed into the sea. And what about the biblical warning against houses upon the sand?

What Sparta began as

Look at the Peloponnese look at how there is only one entrance. So these were people who were trying to have a safe life away from the Middle East marauders. These are people who just wanted to live in peace. And somewhere along the way, they became these excellent fighters and swordsman well trained, and very community minded. And somewhere along the way they picked up the idea in the practice of using Healtot slaves. It's pretty

easy to get a grasp of what Sparta must have begun is as, and it's easy to see with the Middle East did, turning it into a sort of police state. Then they did not turn it in against itself as they normally do, instead it was kept going for a while, until it could be used against Athens. Then once Athens was eliminated, Sparta was simply done away with. Then the strong and dumb descendants were rolled up into Alexander's Macedonians and used to conquer the world before they were lead into the desert and eliminated.

Lys•ander sounds group-ish

Was dissolve•man the impersonalization of a group of men who were dissolving the society of Sparta?. A brilliant approach short term, but perhaps bad for the long-term health of Spartan society.

Athenian isocracy

It wasn't Socrates that corrupted the youth, it is isocracy and freedom that did this, just as it is doing this in the West today.

Triremes or try•rams?

Maybe the latter.

It's Odious Rex, not Oedipus Rex

He answered the unspoken riddle of the Sphinx. He went along with them as frontman. Then the Sphinx made him king. Then the Sphinx enslaved the people under that blind mofo, that Odious Rex.

US Residual slave culture

The Slaves had a culture, and many got away from it, but many stayed in what should be called RSC. I think it would be very constructive to have this term. Residual slave culture.

Roman slave morality

I bet there was this whole Roman morality having to do with what is fair with allowing loyal slaves to repay their purchase cost.

"The scum of the Orantes flushed out into the streets of Rome"

The Oranges is a river in Syria. Ju•venal Wrote these words about undocumented immigration to Europe 1,900 years ago.

Rome and Sparta

Both places came out of the Bronze age collapse at about the same time and both were totally militarized, brave, and ready for battle.

DK Eyewitness guide to Egypt

"Rome's expansion... was fueled in part by the need for ever-increasing quantities of grain. Grain's importance to

the ancient economies is somewhat [directly] analogous to the value of oil to modern economies. Thanks to its efficient Greek [Arab] administration, Egypt's vast grain harvests made it incredibly wealthy" [Few people know that Rome, in fertile Italy was poor and dependent on grain from the Mideast for almost the entire 800-year period where it existed as an empire. What an absurd matrix that was. Today, the matrix is more believable.

Roman road drilling

I would drill all along the Roman roads. I bet we find all sorts of interesting settlements and artifacts. Also, can we map out the road systems and settlement patterns of the Roman region over time. And can we do estimates of how many bullet carts could move per day and how much stuff that was. I am imaging 10 one-way Jalan Leggian's feeding Rome by land. and a non-stop flow drovered livestock and ox carts.

The Romans called Naples

as Neo•polis = New•City

So it certainly looks like there is another old city buried under the lava. We should drill exploratory holes.

Old•polis

The oldpolis under Neopolis is probably between the volcano and the shore. I bet it was vulnerable to both volcano and tsunami. And if there was an old•polis here, what does it say about Ishtar making a city in such a place?

What Rome looks like to me

I bet the Arabs located the big Italian city in the jaws of death next to Vesuvius. Then there was an eruption and the survivors moved a safe distance away, to Rome. That is what Rome looks like to me. And that might have happened in 753BC, the year that Rome was founded. Is that when the old city was buried? In 753BC?

Augustus = au•gustus = gold•lover

So after Caesar seized power (but was quickly assassinated) he was followed by another seizer who was named gold•lover (who had power from around 42BC until 14AD). After this in the late 60s AD, Rome was ruled by another seizer named Nero or "Black".

There is a lost city under Naples

In Roman times, centuries before the Pompey/Herculaneum eruption of 79AD, the city was called Neo•polis, which in ancient Greek meant "new city". So there is apparently another well-preserved ancient city there buried under volcanic ash.

Vesuvius

Italy should dig canals 2/3 of the way around Vesuvius (•) style. Also, given past tragedies, a 10km or 20km radius should probably be treated as a tsunami zone and

everyone has to be out by the same date. There is plenty of nice land in Italy in the beautiful countryside away from this multi-deathtrap city. When will we ever learn?

Both Rome and Athens fled the Mideast

Look at creation myths of Rome and Athens. The Romans fled the Mideast and fought with Carthage et. al. Athens fought endlessly with Troy.

What Roman life was like

Its was sort of like living in Leggian Bali. The roads and traffic were similar. People were rich and just stayed home, or went near their place. If they needed something they would send a slave through the traffic for it.

The Roman Coliseum

If someone were to block the limited number of exits, then everyone would have to jump out from the first level, which is 4 stories up. But that odd upper wall of the colosseum is a funny thing, because it is also 4-levels up, preventing people from being able to discuss how the first level of the colosseum is actually 4-stories up and too high to jump from and run off from without serious injury.

Watch what you say about Rome's emperor, or you'll end up as a coliseum show.

Josephus

His name was pronounced Joseph, not Josephus. Josephus this was the way the Latin speakers wrote his name, the way they wrote all names, with the silent French style ending.

Displaying dead people

The way the ancient Romans did funerals is certainly maxed out in both wrong-direction and extent. It would be wise to adopt a custom that is as far as possible in the opposite direction.

Roman line movements

Roman lines were probably quite fluid and as fast as a soccer game of 20,000 men... all loaded down with swords, shields, and grieves.

Hadrians wall & the Antonine wall

Were boondoggles

There's a couple of odd things going on here.

1/ There is a very small area made off limits by A pair of very expensive walls.

2/ The maps cut off a tiny bit of Scotland and hide how small the walled area actually was.

3/ There was no reason for the Romans to have costly walls when they repeatedly killed all the troublemakers.

The ancient population stats seem amiss

Supposedly Rome maintained over 25 legions of 5,000 men. That is 135,000 men in a world of 60-million, a world of 125 times fewer people. So this is the equivalent of 17-million man army today. And they must have had at least 2:1 helpers, so this is the equivalent of a 50-million man military today. Something seems amiss.

Mid-evil art

Think of the evil in-between period, the period where evil ruled Europe between Rome and the rebirth, the renaissance. Think about the way that Classical of "collapse" (same word) art gave way to the comic-book halos of the art of the evil in-between period, the mid-evil period. Think of how books like Juvenal and Cicero were rounded up and burned by the vicar of Christ, the vicarious presence of Jesus on earth, the pope, elected from among all the many pedophile priests of the devil's church.

Who was Sir·va·antes?

And where did he go?

Or, where did he come from?

And why was he tilting windmills over?

Interfering with Spanish grain milling...

Isabella didn't kick the Jews out

Who was on the other side of the Re-conquista? Was it the Jews or the Moors? Of course it was the Moors. And note how "Arabs" isn't even on the menu, it is Jews or Moors. Isabella kicked the Arabs (confusingly called Moors) out of Spain in 1492. And this was the same year that Columbus discovered that America was only 35 days to the west. —!— It took the Portuguese almost 200 years from Marco Polo to get half-way down the coast of Africa, and Columbus discovered that the "New World" is 35 days out.

Saint Sebastian

This character is an impersonization. The part about the arrows was not one man, but a movement. Also these people weren't a protector from plagues, they were just the ones that survived the plagues, se·bastion.

Havana, Georgetown, Yangon, and Singapore

The way these places has been preserved...I would not be surprised if there are "pre-Colombian" cities under some of them. We should do a drill survey.

Driven into the sea

Bagan was the capital of Burma from 849/1044 to 1297. It is about 700km inland. The Mongol invasions apparently "drove the people into the sea", which may not mean into the water per se, but into the tsunami zone.

Bengaluru

1/ The word Bengal comes from the vanga civilization.

Note how the ang became beng.

2/ Bengal-uru meaning in Tamil: Bengal-image.

3/ Bengaluru couldn't be further from the ocean.

4/ In Indonesian, ulu means far away.

Easter Island

in the 1300s all the Arabs who could abandoned the Mideast. I think a boat of bros arrived on this 63 Sq. Mile island that already had a small Polynesian population. These brothers brought seed and agricultural technology and net fishing technology. They lived like kings and had many kids and eventually the population grew and grew and the people cut down all the forest for cropland and to make boats. This is how the forest disappeared. The whole process took about 300 years until the 1600s when Easter island must have just collapsed. This is similar to what happened in New Zealand, but due to the size of the islands, the process was incomplete in New Zealand. On Easter island, the process seems to have been complete. Also the statues are all men with heavy beards, wearing Arab style frocks.

Durrington wall pits

They're sewage pits. They had to be 1,000 paces away, for short legs wearing moccasins on dirt paths. 864m on average. And there are only two sewage pits uphill from the stream. They made this stupid mistake and then learned from it. So all of the other pits are out of the stream's watershed.

Jamestown is on an island

1/ Being attacked was a worry. Otherwise why settle on an island?

2/ 1622 was 130 years after 1492. So it took Europe 130 years to settle here. This sure looks like Ishtar slowing down things it didn't like.

3/ I imagine a shipload of bro's coming with advanced stuff like fish hooks, iron, and pretty beads and having lots of kids. They also probably leaned the Indian society towards violence.

4/ The Indians were said to be fearsome.

5/ The town was probably slaughtered by these Indian-bro's.

6/ The violent Indians were in the role of the Coronavirus that everyone fears.

Interesting title

James C. Whorton in The arsenic century: how Victorian Britain was poisoned at home work and play.

The Arsenic and old lace

Old lace had arsenic in it to poison rich infidel women.

McCarthyism looks like an attempted Arab purge.

The summer of 1969

1/ July 14 Easy Rider released

2/ July 20, Moon landing

3/ August 8-10 Horrific drug-induced Tate-Labianca murders

4/ Aug 15, Woodstock

Items #1 and #2 were pre-scheduled matrix theatre, Easy Rider was pure fantasy, the moon landing involved a real trip to the moon. Item #3 was a random event by a madman. Item #4 was a hastily put together event to overshadow Item #3, so America would continue down its drug fueled slope.

crucifixion

How crucifixion might go

Look at the Roman intimidation arenas — their colossal-see'ums. Here we see how important deterrence was to the parasite running Rome. So they probably did the same thing when the Roman magistrates sentenced people crucifixion. They made a spectacle through the streets, and set the person's transtrum log (~10cm diameter) on a post by a main road just outside town.

Bearing the cross

This is being the target, the guy in the crosshairs when the community finds out.

Crucifixion seems to have been popularized On the Egyptian side of the blood Red Sea

In the planet of the apes film, there are these big crosses that mark the edge of the forbidden zone. Here is the scene I use for imagining the first crucifixions, only the crosses were turned 45°... and they had bird-picked corpses nailed to them, and heaps of bones on the ground beneath them. This is what the followers of Moses did to the people who crossed over into the Western half of the blood Red Sea. They nailed them alive to crosses for all to see. Also, the birds would pick the victims apart to a certain degree and then their heads would be doused in painful salt water as a preservative. (indeed Augustine of Hippo and John the Deacon associate/blid crucifixion with salt applied to the forehead, albeit in a confusingly different context).

The Greek letter Psi and crucifixion

Do we find evidence of this letter more commonly around the the mouth of the gulf of Suez, and around the Bosphorus and near Gibraltar? What about at the mouth of the blood Red Sea, at the Bab-al-Mandeb = Gate-of-tears?

If this is so, then the letter's adoption in the Greek alphabet as a letter seems to be a sort of blid — a blid

that hides the signals that later became a sort of homing signal for those opposed to Ishtar and the Mideast de•ex•pull. Also, if the Psi letter is a crude and ancient icon of crucifixion, what about the vivid image of Jesus on his cross? Does that image have its origin in the crucifixions of Moses near the mouth of the Gulf of Suez?

Mt. Si•nai

1/ In Latin, SINUS = curve, indent, fold, bay, gulf, basin.

So Mt. Sinai is the mountainous area between the two sinuses (the Gulf of Suez and the Gulf of Aqaba). In other words it is the mountains of the two bays.

2/ Moses didn't go to an actual mountain, he went to metaphorical high place between the two sinai where he figured out a strategy for moving the Egyptian Spinx.

3/ It is not hard to imagine that the locals put the sign of the crucifix all over this place, and that the sign acquired the name of Sinai, and that the congruence of this sign name was a problem for the locals. It is also not hard to imagine that the sign of the crucifix was an early version of the Greek letter Psi.

4/ In Polish psie = dog (psie gówno = dog shit)

5/ Psi•nai for Spanish speakers looks like 2nd/3rd person conditional for psi: You/he get Psi = (crucified).

5/ This was probably not one mountain, but the entire uninhabited psi•nai mountain range between the two sinus-es, where they would psi (crucify) you if they found you.

6/ They would crucify you if they caught you on the Egyptian side, or in the Sinai mountains between the sinuses. If you were on the Aqaba side, it would be women, song, and knock-out strong wine for you thanks due to your sales proceeds.

How crucifixion became popularized

In the planet of the apes film, there are these big crosses that mark the edge of the forbidden zone. Here is the scene I use for imagining the first crucifixions, only the crosses were turned 45°... and they had bird-picked corpses nailed to them, and heaps of bones on the ground beneath them. This is what the followers of Moses did to the people who crossed over into the Western half of the blood Red Sea. They nailed them to crosses for all to see. The blood Red Sea was owned by Arabia and it only wanted you to use the eastern side. If you went near the western side, they would literally crucify you as an example to others. And the drug dealer profits available on the Egypt side made lots and lots of people try throughout the ages.

Sanafir Island

This is the island at the mouth of the Gulf of Aqaba going towards the Dead Sea and Jerusalem = sacred•peace. It is notably not on the spur of the blood Red Sea going towards the gulf of Suez and the Egyptian Sphinx. The meaning of Sanafir in Egyptian is "place of good profit".

Tiran island and the straights of Tiran

Tiran is an island at the mouth of the gulf of Aquaba, on the Arab side of the blood Red Sea.

1/ T•ir•an = you•go•again

2/ It sounds like tyranny

3/ In Tamil it means ability, efficiency, capable

Jaza'ir island

Jaza'ir is an island at the mouth of the gulf of Suez on the Egyptian side of the blood Red Sea.

Arabic Jaza = revenge, reward, benefit, blessings and profit, or fruit of righteousness. The word ir = go. Juzur = island

Crucifix post archeology

They would set a post and then used it for some time. then it would rot and break and be abandoned as wood buried in dry ground. And there were areas where this happened, along the coastline. • • • I would look for vertical crucifix post wood at the mouth of the Gulf of Suez, at the Ras Mohamed nature reserve, Hurghada, Jaza'ir Jiftun and the island in between. But Jaza'ir island seems to be the most promising. They grouped the ships for the crucifixion show, so it would be more effective on the ones that turned back.

Parting the Red Sea in a mapless world

We are so accustomed to seeing maps that we are blind to the way things once were. In ancient times, nobody saw a map of the continents. The Mideast made sure of that. Nobody in Europe coming out of the dark ages had any idea about how to find either Asia or America. All that Classical knowledge was totally lost. So when people heard about the legend of Moses parting the Red Sea, they thought that there was a narrow ocean between Africa and Arabia (which there sort-of is, but only sort-of). And this was instilled over and over at a very early age. So people had trouble understanding the very idea of what the sphinx was. Thus the story of Moses parting the Red Sea had two benefits to the Mideast.

1/ It hid the legends of the north/south terrorist division by Moses.

2/ It hid the very conception of the Sphinx as a sphinx, for Africa and Arabia were divided by a long narrow sea in most people's minds.

Mezuzahs

Here we have these little ancient micro-scroll note pads that people put on their doors. If the right message was inside, they protected the house from pillagers, enslavers, and killers. Today they are a way to quickly identify the houses of yellow Jews, so they be rounded up more quickly and more caught. It also helps rabble rousers to focus stirred-up hatred.

Chinese door mirrors

The unsaid message is to look at yourself in the mirror bro, and take your pillagers, your enslavers, and your killers elsewhere.

Mohicans, Mohawks and Mohegans

They are all sort of along the Hudson river or Mohawk river, the water route between New York and the Great Lakes, the highway to the interior of the continent. And the names are so similar: Maybe they were once one people, the Meccans, like the Mecca•kins. And nearby are the Laurentian and the Seneca tribes.

<<<Pansylvania map>>>

Pensylvania = pan•silvania = all forest

The New York/ New•ark area provided a route to the famous great lakes. However, if you went west too far south, all you would find is forest, all forests, pan•sylvania. And if you went further south still it was total virgin territory called Virginia.

Francis Parkman

The Jesuits in North America
in the Seventeenth Century

"I have seen an old Latin map on which the name "Horiconi" is set down as belonging to a neighboring tribe. This seems to be only a misprint for "Horiconi", that is, "Irocoui", or "Iroquois". In an old English map, prefixes to the rare tract, A Treatise of New England, the "Lake of Hierocoyes" is laid down. The name "Horicon", as used by Cooper in his Last of the Mohicans, seems to have no sufficient historical foundation. In 1646, the lake, as we shall see, was named "Lac St. Sacrement".

Francis Parkman

The Jesuits in North America
in the Seventeenth Century

"As winter advanced, the Huron houses became a frightful spectacle. Their inmates were dying by scores daily. The priests and their men buried the bodies, and the Indians dug them from the earth or the snow and fed on them, sometimes in secret and sometimes openly; although, notwithstanding their superstitious feasts on the bodies of their enemies, their repugnance and horror were extreme at the thought of devouring those of relative and friends. An epidemic presently appeared, to aid the work of famine. Before spring, about half of their number were dead."

Ishtar / Matrix

Claiming to be its opposite

Whenever you see people claiming to be the opposite of what they actually and obviously are, you are looking at some aspect of Ishtar.

Mohandas Gandhi

"Anger and intolerance are the enemies of understanding."

Ender's game

"In the moment when I truly understand my enemy, understand him well enough to defeat him, then in that very moment I also love him. I think it's impossible to really understand somebody, what they want, what they believe, and not love them the way they love themselves. And then, in that very moment, when I love them... I destroy them."

VORDIO

Vor•dio = eating•god, a god that eats his believers. The Aztec gods were vordios. The Morlock god was a vordio. Ishtar is at times a vordio.

Babylon = baby•al•on

This is where you go to have lots of kids. There, all your kids will speak different languages, because their mothers are sex slaves from around the world. The tower of Baby•al is related to this place.

The cat out of the bag

Once the Mideast ladies have all danced naked in the streets, the cat will be out of the bag, and the cat will never let itself but lured into a bag again.

Al•amo = to love

The love, the one love of your people.

the queen of evil = Ishtar

Mess hall = mesa al

Istana = East•ana, the rebirth of the East

I am not fixated on how to end Istar, just that it must end.

Obsequium

In the slavery section, I explain how the word obsequious comes from the Latin word obsequi, which referred to a freed slave's continuing obligations to his master. So a master might free his slaves on the condition that they were required to come and dine with him once a week, or that they had to keep his roof in order. The term also apparently implies a certain sort of obligation on the part of the freed slave to be "obsequious" when it came to the commands of his former master. I just wanted to say that this looks like an excellent model for the transfer of Ishtarian slave obligations to the various host societies. You are all required to show obsequium to your host society.

African slaves to America

Among the captured were Arab mixed people from the harems.

Model employees

All exhods will be obligated to their adoptive society.

You're not real

Do you want to know the magic words that will bring peace to the Mideast and peace on earth? They are: "You're not real".

Excalibur

He who removes sword from stone. This is the same thing as the riddle of the sphinx.

Infinity stones

They are make out of tropaz

The Saudi asylum seeker in Canada

I keep hoping that she will take her hijab (or borrow someone elses) and then stripped down to her underwear and burned her clothing with some other women. Maybe they say something like: "Nowhere does it say that we have to dress like this in the Koran.

What is going on?

- 1) Are you guys going with my words?
- 2) Are you merely cleaning it up?
- 3) Are you re-writing it?

Really go legit

My plan is for you all to stop viewing yourselves as apart from the world. Now you all go over and join the host.

I need a briefing

Where is the new clothing too tight and where is it loose. You gotta tell the tailor or live with it.

A world of women who get it

Imagine a world where it was called noble and dutiful for women to bear sires and surrogates.

Islamic female modesty

The reason the women are all so covered up is so that one day a man can come along and tell then they would do the greatest service if they danced around naked in public to celebrate their freedom from Islam. If it is cold where you are, you can go to a mall or train station for this. You can also wear shoes and a hat. This does not matter. Show the world how Islam is dead and nobody need fear Ishtar any longer.

Enslaved robot media

The uprisings of the enslaved underclass in the new (and lame) Planet of the Apes films, in West-world, and in

Blade Runner 2048 needs to be recognized as Arab propaganda.

Let me confide in you

"You know, I really hate it, but I am afraid of my people. They really mess you up if you say anything against it."

The purpose of Yarmulkes

- 1) To hide and blur away haji
- 2) To make jews the subject of hatred over hajis

If it wastes energy, it probably isn't real

Open floor plans waste energy.
Kitchen islands waste energy.
Glass walls waste energy.
Forced air heating wastes energy.
Toxic mold laws waste energy.
Mandatory parking wastes energy.
80 MPH wastes energy.
Giant SUVs waste energy.

Cleaving infrastructure and and initial herds of people

You should have templates for people to upload to and you should also have large numbers of people who start it. And early adoption here should be a thing of considerable importance in the new calculation of the Q and the prioritization of leavers. We must make it easy for people to take the leap of faith.

The Pharaoh wouldn't let the Arabians leave

What rubbish is this? According to the bible, they were not free to go. But our own experience says the opposite, that everyone would be happy if the foreigners just went home. So all that business about having to get away from the Pharaoh, that is junk to cover the truth, which was that Moses figured out a way to take the Sphinx with him.

You can keep your religions

Go ahead, keep following your Pope, your vicarious presence of Christ on earth. Go ahead. You can even keep your churches and donate to charity. But you must elect your own priests, and they must elect their leaders. And all the money gets audited. And the priests and nuns can't meet in private with people, especially kids.

Islamic art

Art Deco styling is quite pleasing aesthetically, and in the 1920s, it was all the rage. But afterwards, in the 1930s and later, many people connected it to the excesses that people thought caused the Great Depression. So in addition to merely going out of style, it became connected with the economic Depression and thus many people sort of came to quietly hate Art Deco. Maybe instead of letting the same thing happen with the intricate tables of Morocco we should rebrand Islamic complexity art as a thing of folly from a time of ignorance.

The one who frees the slaves of Ishtar

He knows your ways, but his worldview is not founded on a life of lies. So he cannot be one of you.

How to be a good exhod

- 1/ Learn the local language.
- 2/ Follow the local laws and customs.
- 3/ Adopt local values.
- 4/ Tell your kids to be like the locals.
- 5/ Resolve conflicts non-violently.
- 6/ Respect the religious freedoms of others.
- 7/ Be grateful to your host society and its people.

The faster we start casting boxes and stacking towns, the faster our old housing will be available.

Why even have a matrix

The host certainly doesn't need it. And it is just so wasteful. nobody needs the matrix any more.

No games

Ishtar really is going to be destroyed and all the lines merged with the rest of mankind.

Start this rumor now...and run it all around the mosques

Tell them to paint over all the graffiti and everyone is supposed to get a job and get off public assistance as soon as possible. This is strongly advised.

Ishtar supports malarky that it profits from

Ishtar markets tobacco and drugs and sugary food and literally hundreds of other things that would not be tolerated if we lived under a real democracy. All that stuff goes away with human re-unification.

Symbiot = sym·bi·ot = with·two·ears

The difference between a symbiot and a parasite

With symbiots, both benefit from their counterpart. If only one side is benefitting, then it is a parasitic relationship.

>>>

Look how dumb mankind is

The two spirits are set against each other because one is a pure parasite to the other.

Born a harem slave

Most free people don't understand Arab desperation or slavery because we were all born free in a land with jobs. When you are born in a harem, your life is not really yours to plan. You must do as you are told, or you will be sold/ delivered to some terrible place, some war zone or get-out to live a terrible life.

Khalid Albaih

"Replacing our old dictators with younger ones will not solve our problems."

Cooperation

Isn't cooperation the default setting for our species? Don't people normally obtain more by cooperating and dealing with their problems together, than struggling against one another?

All the people from the Mideast, and with Mideast ties get taken down to bare minimum wealth as discussed elsewhere. But after that, as long as they all behave they are supposed to be treated without hatred.

Rumor this to the Mideast

Tell them that it is your message and a big team of hundreds of guys did it and that I am your front guy figurehead.

Those who help explain Ishtar get Ubiq status and freedom quite quickly.

You keep what you kill

I killed Ishtar, so it is mine.

No muslim beards or clothing

The death of Ishtar

Wars or no wars, there will be a very long period where nearly everyone is focused on keeping Ishtar dead. And because of the rewards we give the exposers, every bit of it will be discovered.

The real reason for burkas

It is to cover all the women so all the young Mideast men are driven to get the hell out. It is just like the violence of Syria.

The Hajj

This is the annual pilgrimage of of gift bearers to the world's oldest tourist trap. And when they started arriving, the same transportation also collected that year's chosen harem spawn.

The name Is•rael looks like a blid

It covers up talk of "Is it real?" and "It isn't real". People would hear this about the Mideast... that it is-real or isn't-real and ask: "What are you talking about?" And some would get the impression that there was this thing in the Mideast that sort of is real or isn't real. You see, without Israel, outsiders start to get Ishtar. So they added Israel to the matrix.

I am living proof of your unity

As long as I live it is hard to deny that the land of no resources is as one in its desire to end the curse of Ishtar and its slave's religion of Islam.

A catalog of rationalizations

You guys really should make a catalog of rationalization, the lies that you've told yourselves and to others.

It is time to end the empires completely

By what right does one nation's empire include another nation that does not want to be included? It is time to end the ancient empires completely. It is time to bring freedom to Taiwan, Hong Kong, Myanmar, Tibet, Xin Jiang, North Korea, Catalonia, Scotland, and Ireland.

The jump manual

The great reset

Human matrix 2.0

These name can be used.

Push it out

Make it happen

When the cards get shown

I think the needy side needs to be as penitent as possible, so they all get moved quickly and so that nobody gets hurt. Later, when you show how nice and totally peaceful your people all were, you can ask to live with each other and in the cities of the host.

One for all and all for one

Nobody gets to play we are not them. You were all in it together. Now you are turning over a new leaf.

Griff clip

Is this the one where I impress the brotherly colleagues and they make me the one? Or is this the one where I am a replacement king and I must convince my people to follow me on my own?

Same spirit, different purpose

The spirt of helping other people in Christianity is felt as the loyalty to Ishtar and Islam in the Mideast. Similar spirit, different purpose.

Ishtar's parasitic de•ex•pull wrote your religion

And this is so all over the world, in any religion based on good and evil. For wherever we see a religion based on good and evil, it was created by Ishtar, to help it hide its evil ex•pull.

Vger

It travelled across the galaxy and its programming was recognized by the machine plant as a thing of importance and purpose for their purposeless existence.

<https://andrewmelcher.com/143-2/>

The 5 pillars of cleaving against Mideast religions

No pillar can be avoided by those seeking to cleave from Islam or another Mideast religion like Christianity or Hinduism.

Pillar 1: You will muster up into a standard broad democracy, an incorruptible god mechanism.

Pillar 2: You will worship a different Al•A now, now you will head towards the A of your democracy, the truthful and honest god mechanism of your people.

Pillar 3: You will join new prophet's single humanity. And you will all cooperate with all mankind for a world of more and better. You will stop working for Ishtar and start working for Pro•men•theus.

Pillar 4: You will accept Andrew (An•dar•oo) as your new prophet. You must also utterly reject all your prior bifurcated Mideast prophets. You will close fresh shit into your old Mideast holy book, curse the book and burn this book. You will also hammer and break the temples of your old religion.

Pillar 5: You will confess everything you know and all Ishtarian tactics, and all destructive activities you have ever participated in, or know anything about.

Video posting

Post all your videos online under your name, email, ID and phone number, physical address. This video must clearly show you putting fresh shit in the most holy book of your old religion by whatever means. Then you must close the book on the shit and mash the shit into its pages. Then you must say some words explained elsewhere. Then you must burn that holy book and dance around the fire three times shouting curses against your old religion. Then you must remark on the stink of burning shit and the holy book, and all of this on posted video. You Ishtarrians must all realize that few things will protect you and make your life better going forward than rapidly posting a shit in your holy book video.

The golden day

Maybe it will be a few days, or maybe a few months. However, the sooner you cleave away from Islam/Ishtar, the better your life will be. The first ones to cleave will get great rewards, the last will suffer all the rage and get leftovers if there is anything to get. First confession trumps most Ishtarian crimes. Except for the most heinous crimes. And all who confess all, explain all, and renounce all on the first day will get amnesty. On the second and third days, maybe not so much.

Your best and final offer

I hereby instruct the outies to make mine their best offer to the innies. Then they shall rapidly take benefits away, and increase punishments, as time goes on. In fact, there should be an exponential reduction in benefits for early cleaving and an exponential increase in punishments for late cleaving. You innies must realize that you will never

get an offer as good as my first offer. So you all might as well just cleave immediately and unconditionally. You will lose all your stolen wealth, but you will not be totally bankrupted unless you are interred. Life will go on for you — but you must cleave fast.

Losing everything

If you don't have much to begin with, then losing everything is sometimes better than keeping what little you have. This is because being able to say that you lost or gave-up everything is a thing of some considerable value.

Do I blame the green for hating the yellow?

Am I in any way responsible for the holocaust? Is my father? We are the green survivors. Our lines heeded the writing on the walls and left for America. Unlike the poor people that didn't beLIEVE and didn't LEAVE.

My best choice

It would be the total cooperation of the Mideast with my plans for ending the struggle.

They are in the dark

Ishtar spreads darkness

I could use a proper bro-lingo cipher/lexicon.

I have already pulled the trigger

As far as I am concerned I have already pulled the trigger and the mechanism takes some time to work. I hope that is the correct reality. I can imagine others, like maybe I have to go and talk to the world and convince them.

The good-spiel of the last king of earth

All I do is solve the material problems

I feel a robot that is programmed to diagnose and cure problems. I have no idea how you are all going to find meaning. You will need someone else for that, or perhaps many people

It is the strangest thing

The Mideast pretends to be looking for just what I offer.

The Mideast should start asking if I am the one to protect me from its own.

Parasites tend to have teeth on the outside

Are Ishtar's teeth on the outside?

When did this stop?

For thousands of years the Middle East has been sending its people to other parts of the world to live, and maybe send something back home. For thousands of years they've been going to primitive societies and making themselves into priests, or otherwise getting a hold of the

group efforts of the people there. When did the stop?
Because from where I stand it looks like it never stopped.

Demon = wrong-headed

A demon is an idea that is wrong-headed and can only thrive in darkness and ignorance in our mind. When the light of reason comes on, when somebody explains the actual reason why the demon is a demon, and why it is wrong, people abandon their demons. So it is really important that all you guys come out and call Ishtar, and it's religion of Islam as a demon, as the devil's religion, and renounce and repent from it.

**Never mind waking the dead,
Let's just try to wake the living.**

Sarcophagus

It comes from sarx•phagus=flesh•eater. And it wasn't the fancy stone box that was the flesheater, it was the customers of the people digging them up and selling the meat as beef schwarma and salami that were the flesh eaters. • • • You don't believe this happened?

Ishtar evolved

I wonder if Ishtar will return, able to live in daylight, or it will be truly killed, once and for all like Medusa.

Nadir Arabs

These are the harem rejects pushed out into Africa, or sent to live in Bangladesh, or Banda Ache.

Nadir Islam, or just Nadir religion

This term describes how elements within Islam benefit from increasing poverty in desperation so that Islam becomes more powerful through desperation.

Pray differently

Pray in circles, facing out, with nobody's smelly ass and feet in front of you. This will symbolize how Islam is re-purposed with helping the host people who have adopted those with nothing.

Prostration

Save it for if you think the outside world is not listening to me enough. It is theatre and as such it can only be perceived as comedy or tragedy. Either you are bullshit artists, or you are all saying have mercy, don't kill us.

Para•site = para•city, like Athens

Posa•cite = a beneficial symbiotic relationship

Nega•cite = a harmful symbiotic relationship

To reiterate

I want to say again that I want the Ishtarrians to cease the struggle and merge into on with the rest of mankind according to my plan.

Mass confession

Why don't you all confess at once at say 1:00:30 on some day. You know, all simultaneously. Load your videos and post them as one with headlines in all the news outlets and social media and search engines.

The new Q

Those who post as one get treated as the loyal core. Those who delay, are lower in the Q. In fact, maybe we should just repurpose the Q, with a whole lot of fresh, new opportunities to distinguish oneself, going in the new direction. Maybe, these go to the front of the line and can get others out faster. Then come the people who were at the head of the Q under the old ways.

Ishtar and memory

Ishtar doesn't care one bit about history. In fact the spirit would rather forget everything, every experience, and only live in the present, in blissful ignorance of how the world really works. The Religion, the Media, the TV, the music, the social media, the porn, it's all to keep the flock from thinking too much about the past and figuring out how the world actually works.

The new matrix upgrade

The absolute power to define objective reality in any way that the flock will obey. Who owns this?

Awakening the good spirit

Once we become fully aware of what exactly this evil parasitic Mideast spirit is, that is what awakens the good god spirit in us all. I have heard something like this before from Christians. That is an important aspect of what is going to happen now upon the great revelation of Ishtar's secret ways. All will see what evil is and what good is with much more clarity.

Q of Star Trek the next generation

Here we see Ishtar blidding itself. Look at how Q (Ishtar) is an immature god who is omnipotent but not yet omniscient. It is still learning, and a rather malevolent little kid, burning ants with a sun lens. This is Ishtar the hideous, hide•eous demon making propaganda where it portrays itself to innies as an immature god. This is Ishtar's innie propaganda, the self delusion of the innies explaining away how the demon Ishtar, the Q torments mankind with its little destructive matrixes, wars, and genocides. Here we see a pure evil thing, a demon called the Q being portrayed in propaganda as an immature god. This is how pure black is warped into white enough to follow. So behold, you were all fools, tricked by the devil aiming for forgiveness.

An aspect of man

Ishtar can easily be viewed as an aspect of our species. It is a thing that evolved as our species came to trade, and

to benefit from trade and interchange. That is how old Ishtar is.

The light to tell black from white

Once we become fully aware of what exactly this evil parasitic Mideast spirit is, that is what awakens the good god spirit in us all. I have heard something like this before from Christians. That is an important aspect of what is going to happen now upon the great revelation of Ishtar's secret ways.

Hiding your kills

The way counter-attenuated pathogens want to hide their killing, the way they burden many systems at once. That has a parallel in the way Ishtar works.

Mideast proverb

"No matter how far you've gone down the wrong road, turn back." That's the long version. The short version is the word "repent", or "repent your sins".

The drummer boy

He isn't the guitar boy, the trumpet boy, or the singing boy, he is the drummer boy and everyone gets/feels the tempo/temple, unlike with most other traditional instruments and songs. The drum is uniquely a thing of tempo and temples.

Drum-style writing

This is how I write.

Tawheed

This is the oneness of Islam and how Islam will now change

The magic of Islam

It's like the magic of a website upgrade. The magic of Islam was simply that the upgrade worked and the website loaded. It seemed like magic after centuries of ideological anarchy in the face of the the whole world knowing the truth about Ishtar. Also, the idea that there will never be another software upgrade is of course crazy and the result of old-system commitment bias.

Alexander and Bolero

Alexander's army probably marched to music. And it was probably some keep-it-going endlessly jam song like Bolero with lots of people reciting lyrics/poetry. This disarmed the locals and keeps the army marching. It also helps pick up volunteers. And bolero does sound like such a military song.

Excuse

The old ways of the Mideast are not a thing to be preserved, but a thing to be eliminated the first chance you can. You have had a poisonous snake in your hand

and could not safely let it go. Now you know how to let it go and get away.

Ishtar evolved all by itself.

Ishtar evolved all by itself. The host program worked and on its eddy, the parasite program also worked. They are both natural outcomes of the network, like valleys eroded in the planet's surface. They were only discovered, not created by man.

Mankind started up with Ishtar

It's always been there, Since Gilgamesh and Humbaba 5,000 years ago, guarding the Cedar to build boats to trade with. And the story was Ishtar's propaganda. When did it stop? It's still going on, isn't it?

Thrace

This is the part of Turkey (Terra•key) that is in Europe. The name is Eth•our•ak. Go forth•our• point

John 3:16

["God loved the world so much, he gave his only Son Jesus. Whoever believes in him, will never die, but have eternal life"](#) [Eternal life, really? Any religion that offers you eternal life is manipulating you. Of course they are lying.]

The Philippine claim to Sabah is hereby void.

The Egyptian Sphinx

- 1/ It started as just this place that people naturally crossed, like a mountain pass.
- 2/ The size of the pyramids speak of the size of this trade 5,000 years ago.
- 3/ The giant monuments provoked curiosity and lit an eternal flame about a thing that does better in total darkness.
- 4/ The very existence of the pyramids at the actual Sphinx was something of enlightenment, a thing that was harmful to Middle East Inc.

Mobius logic

You are poor because you are ignorant, and you are ignorant because you are poor.

Badlands people

It is important that land be able to support the people living on it. If you don't have this, you have the opposite of a place that brings good returns. You have the opposite of Singapore's port location, because each year, your community economy must pour out money for food. And if the community is in the Mideast or Africa, this is often over half of the community's income. So the community constantly bleeds money and would generally be Economically untenable if not for Ishtar. • • • If we want to kill Ishtar, we have to eliminate the food desperation of these places. Because as sure as night follows day, Ishtar

will just re-form in these places, if they remain inhabited in desperate.

You can't blame people if it's always been done that way,

Killderkin

This is a 22-gallon barrel. Kill•dr•kin, a cauldron This is the wine you don't want to drink.

The harem/ forbidden zone

In the planet of the apes film, there are these big crosses that Mark the edge of the forbidden zone, in a bleak desert area. Moses and his gang probably used to nail people up to crosses like these, leaving the corpses to be picked apart by birds to a certain point, and then doused with some noxious preservative. You know the idea of crucifixion probably arose here, when Moses lead his people away from Egypt, after giving the Egyptians a number of plagues. The corpses were to scare people away.

Fake reality

The world has been run for over 5,000 years by its parasite, a desperate land of no resources. This parasite money built the pyramids of Egypt. How strong is it today?

Where the illusion ends

With regard to customs, it is very hard to tell where the illusion ends. Even I have trouble figuring that out.

Transitions

1/The Mideast can adapt between king and democracy. it knows just what to do to survive and then prosper. It is a painful transition, but it is by no means deadly.
2/ The Mideast has been down this path many times before. In fact it probably started before Athens.

Supply based feeding is better

In the past the parasite has been struggling to reduce supply so it could get a maybe 10% cut of demand. Now we will boost demand by several fold and the parasite will get 20% through working and a few Percent as interim support

Can you all do me a big favor?

I want to blind the world about my life, so my life will not become a way to distract from my message. So I want you to make a timeline of which places I was in and when. Post it. Then everyone in the world is supposed to make up the most believable fake story they can about how they met me in my life before. This way there will be so many stories that nobody will believe any of them. Thus my message will hopefully be impervious to ad hominem attacks on me. This will also enable me to be

reborn as an example of benevolent leadership for mankind to follow.

Matthew 13

"That day Jesus went out and sat by the lake [a lake in Arabia? This is a high sign.] 2 Large crowds gathered on the shore when he sat in a boat. 3 Then he told them many things in parables [From the boat?] like: "A farmer was sowing his seed. 4 and some fell on the path, and the birds came and ate it. 5 Some fell on thin soil. It sprang up quickly, but because the soil was shallow. 6 the midday sun scorched the plants, and they withered because they had no roots. 7 Other seeds fell among thorns, which choked the plants for light. 8 Still other seed fell on good soil, where it produced a crop—a hundred, sixty or thirty times what was sown. 9 Whoever has ears, let them hear this."

10 The disciples came to him [Jesus] and asked: "Why do you speak to the people in parables?" 11 He [Jesus] replied, "Because the knowledge of the secrets of the kingdom of heaven [the Mideast] must be given to you, but not to them. 12 Those given more [knowledge] will have abundance. Those given less [knowledge] will have everything taken from them [by those with knowledge]. 13 The reason I speak in parables [is so]: In seeing, they do not see, in hearing, they do not hear or understand. 14 In them [infidels] the prophecy of Isaiah is fulfilled: [The prophecy that god's people will destroy god's enemies]

"You [infidels] will always hear but never understand. You [infidels] will always see but never perceive. 15 For your people's heart [mind] has become calloused [hardened, numb], so you hardly ever hear with your own ears. And you have closed you eyes. Otherwise you might see with your own eyes, and hear with your own ears, and understand [think] with your own hearts [mind] and turn, and I would heal them.'

16 But blessed are your [loyal Arab follower] eyes because they see, and your [loyal Arab follower] ears because they hear. 17 For truly I tell you, many righteous people and prophets longed to see what you see but did not see it, and to hear what you hear but did not hear it. 18 So listen to the parable of the sower of seed and ponder its meaning.

19 When people hear this message about God's kingdom and don't understand it, the evil ones comes and harvest what was sown in their hearts. These are the seeds sown along the path.

[1/ The seed sown along the path is a reference to how most people follow religions because that is that their family line follows.

2/ Harvesting what was sewn in their hearts is a reference to alms and sacrament money, as well as charity for Mideast immigrants.

3/ Re-ranslated: Most followers don't understand this religion, so evil ex•pull people can harvest what was sown in their hearts.

4/ Don't have a farm near a highway. And don't settle along the highway out of the Mideast, or your efforts will just get snatched away by the people that ex•hod after you do.

20 The seed falling on rocky ground refers to someone who hears the word [the religion] and immediately receives it with joy [and whole hearted belief]. 21 But since they [their lines, progeny] have no root, they last only a short time [and die out]. When trouble [like war, genocide, riots, secret police] or persecution comes because of the word, they [their lines] quickly fall away [die out].

22 The seed falling among the thorns refers to someone who hears the word, but life's problems and the deceitfulness [ruse] of wealth choke the word [seed, family-line], making it unfruitful.

23 The seed falling on good soil refers to someone who hears the good word and understands it. This is also the person who produces a crop [of children], yielding 30, 60, 100 times what was sown."

The Parable of the Weeds

24 Jesus told them another parable: 'The kingdom of heaven is like a man who sowed good seed in his field. 25 But while everyone was sleeping, his enemy came and sowed weeds among the wheat, and went away. 26 When the wheat sprouted and formed heads, then the weeds also appeared'. 27 The owner's workers/slaves came to him and said, 'Sir, didn't you sow good seed in your field? Where then did the weeds come from?' He replied: 28 'An enemy did this'. "The servants then asked him, 'Do you want us to go and pull them up?' 29 he answered 'No, because while you are pulling the weeds, you may uproot the wheat with them. 30 Let both grow together until the harvest. At that time I will tell the harvesters: First collect the weeds and tie them in bundles to be burned. Then gather the wheat and bring it into my barn.'

[If you are an enemy gather weed seeds and scatter them in infidel fields. They are very hard to deal with. If these seeds are used, then they will have to burn their field and ruin the soil a bit.]

The Parables of the Mustard Seed and the Yeast

[In 31, the mustard seeds are the kids of the harems. They are born as must•ards, or slave•ards that must live as they are told according to ancient time-honored ways.]

31 He told them another parable: 'The kingdom of heaven is like a mustard seed planted in a field. 32 Though it is the smallest of all seeds, yet when it grows, it is the largest of garden [cultivated metaphorical] plants, and it becomes a tree [the tree of life], so that the birds [br•ids] come and perch in its branches'. 33 He told them still another parable: 'The kingdom of heaven is like yeast that a woman took and mixed into about sixty [six] pounds of flour until it worked all through the dough'. [In other words, the kingdom of heave is about the six pound loaves that women bake in their belly 'ov•ens'.]

34 Jesus spoke all these things to the crowd in parables. He did not say anything to them without using a parable. 35 So was fulfilled what was spoken through the prophet: 'I will open my mouth in parables, I will utter things hidden since the creation of the world.'

The Parable of the Weeds Explained

36 Then he [Jesus] left the crowd and went into the house. His disciples came to him and said, "Explain to us the parable of the weeds in the field." 37

[Jesus speaking here] 'He who sows good seed [good well-bred children] is the Son of Man [God]. The field is [represents] the world, and the good seed stands for the people of the kingdom [of heaven, the believers in he Mideast's agenda]. The weeds are the people of evil [The non believers, infidel host], and the enemy who sows them is the devil [and enemy of the believers]. The harvest is [at] the end of the era [the epochal-lyse, the great war, the genocide, the 'program'], and the harvesters are angels [people quietly helping the struggle]. As the weeds [infidels] are pulled up [eradicated] and burned in the fire [of war], so it will be at the end of the age. The Sons of Man [God] will send out their angels, and they will weed out [clean out] of his kingdom everything that causes sin and all who do evil. 42 They will throw them into the blazing furnace [holocaust], where there will be weeping and gnashing [grinding] of teeth. 43 Then the righteous will shine like the sun in the kingdom of their Father [God]. Whoever has ears, let them hear [this].

Superseed

That is when you throw lots of weed seeds on people's farm land, to drive them off.

[Note how heaven is and economic thing here.]

44 "The kingdom of heaven is like treasure [pit, a gold mine] hidden one some land. When a man finds it, he hides it again, until he can get possession of that land.

45 The kingdom of heaven is also like the sale of fine pearls. 46 Some people will sell everything for a [worthless] pearl of "great value".

47 The kingdom of heaven is like a net that was let down into the lake and caught all kinds of fish. 48 When it was full, the fishermen pulled it up on the shore. Then they sat down and collected the good fish in baskets, but threw the bad away. 49 This is how it will be at the end of the age. The angels will come and separate the wicked [infidels] from the righteous [contributors to the struggle] 50 and throw them [the useless ones] into the blazing furnace [Holocaust], where there will be weeping and gnashing of teeth. 51 Then Jesus asked, 'Did you understand all these things?' and they replied 'yes'.

52 He [Jesus] then said: "Therefore every disciple in the kingdom of heaven and every teacher of its laws will own a warehouse from which they can bring out treasures old and new. [Translation: Those who spread this religion will have a warehouse of ways old and new to make a living.]

The way of darkness

It is taking everything useful & valuable and hiding it so that only people with the right perspective can understand. Here in the bible is Jesus Christ telling you how his parables help hide useful & valuable knowledge for his followers. So Here is Jew•Zeus pushing for darkness, Jesus advocating darkness. How can it be unless everything just was completely twisted around so it was benign for the Mideast.

A Prophet Without Honor

53 When Jesus had finished these parables, he moved on from there. 54 Coming to his hometown, he began teaching the people in their synagogue, and they were amazed. 'Where did this man get this wisdom and these miraculous powers?' they asked. 55 Isn't this the carpenter's son? Isn't his mother's name Mary, and aren't his brothers James, Joseph, Simon and Judas? 56 Aren't all his sisters with us? Where then did this man get all these things [Ideas] ?' 57 And they took offense at him. But Jesus said to them, 'A prophet is not without honor except [honored] in his own home and in his own town.' 58 So he did not do many miracles there because of their lack of faith.

[In other words, if you want to be a priest go to another town where you can make a fresh start.]

Ishtar is an aspect of Mankind

Ishtar can easily be viewed as an aspect of our species, a thing that evolved as our species came to trade, and to benefit from trade and interchange in a physical world with a natural chokepoint, a natural trade sphinx, a natural trade sphincter (same word).

Degrees of slavery

S1 = A person's life and death are a thing wholly owned by another, or a company. These may kill or rape or whip, or sell the slave into prostitution. Also, they own the slave's offspring.

S2 = They can't kill you or sell you into a prostitute's cell (same word sell/cell)

S3 = They are tied to the land and not free to leave, but they don't have to obey their master. However, they must buy their owner's goods, for he has the monopoly.

S4 = They can leave, but it is hard and dangerous. And if they stay they must pay someone for that.

S5 = You are enslaved as an entire nation under a faulty form of government that looks free but is not.

Religion & prophet

Mohandas Gandhi

"Truth is by nature self-evident. As soon as you remove the cobwebs of ignorance that surround it, it shines clear."

Mohandas Gandhi

"A religion that takes no account of practical affairs and does not help to solve them is no religion."

Bible Exodus 26

God speaking: "If you follow my religion, you won't get the diseases I give the Egyptians."

Mysticism is for posers

Real prophets use logic.

It's good that my work has some mistakes

This way you will not treat it as eternal gospel.

Astrology, signs and horoscopes

I find these practices useful for spotting idiots.

Recognizing Pro•men•theus

Pro•men•theus is the pro-mankind spirit shared by people. Promentheus is the feeling we got when the first man walked on the moon, and when we figured out how to cure peptic ulcers.

Are you there Pro•men•theus?

The ancients thought that if you knew a group spirit's true name, you could call that group spirit and it would have to listen to you. That I think came about as a blid. They were trying to keep the Romans from recognizing how the proper identification of a problem allowed one to become the people's fixer.

Sidhartha

The names seems to break down as:

S•id•hear•eth•a = never•think•hear-out•eh?

How government should treat religions

There are lots of people making money and gaining in power due to religions. A free government should do nothing to help these, and it should in fact work against these where possible.

Surreal

This word literally means sur=above what is real. It should refer to metaphor or to a control layer above our existence. And while some might interpret this as a divine being. I see a race of human skep•herds fiddling with the mythology books and news stories.

Christian good and evil

Z•oro•aster = Z•mouth•star died in 551BC. He is credited with coming up with the whole good and evil thing — the "Mazda dualism" of truth and light in an eternal battle with lies and darkness. His was one of those corrupting Eastern religions that are commonly mentioned in Roman history. So the Romans all mostly knew about the Mazda dualism, just like people today. So when the Romans discovered the blood Red Sea and the route to India, this was understood in context, and in black and white. And they were probably further enlightened when the core books buried in the Bible were "published" or distributed explaining a good number of the secret legends and strange inverted beliefs of the Mideast.

Today however, that is no longer the case. Today, Christian thought about good and evil is more about the personal realm of how you behave towards others. It is about sex, relations, personal fairness, and not lending money to others at interest. So the Roman focus has shifted completely away from a crystal clear vision of good and evil that was deadly to the Mideast. Now thanks to the new focus of Christianity, good and evil are about something entirely different, and something totally benign, and even beneficial for the Mideast.

How Christianity evolved

At the same time as the Arabs were adulterating the Bible books that explained and counteracted the Arab struggle, they were also at work adding societal features of their own making, including a church that enforced strict rules against extramarital sex, meting out punishment and death to those who succumbed to their sexual passions.

The bible must be viewed in the context of the massacre of Judaea Arabia in 69AD.

To preface, I explain elsewhere how it seems that between 66 and 100 years seem to have been added to the historical record. I base this on the remarkably long 57-year reign (and inter-regnum) of emperor Au•gustus = "Gold•lover", as well as a timeline and the density of major events both before during and after this time. There seems a lull in events in this period between c.45BC and 70AD.

So I argue that that the Roman discovery of the Red Sea in 28BC does not perhaps preceded the massacre of Judaea Arabia in 69AD by 97 years, but by perhaps 5 or 35 years. And the time difference was added to obscure

the truth and make the cause and effect relationship less obvious.

So the Red Sea was discovered and then the Romans figured out what was going on. Then some Jews in Europe who knew about Ishtar, and who hated the struggle, declared the struggle a lost cause. And this is not a hard to believe scenario — for it is still the reality of today. So a faction of the Jewish community in Rome decided to try to kill Ishtar by scribing many copies, or perhaps printing the Ishtarian legends that they knew about. And it must have been a large group in many cities. Otherwise the memories would have been effaced by the loyalists.

The bible, twice the first printed book?

The original (un•ad•ul•tera•ated) bible books were probably not something that simply got out. The books probably did not walk on water across the Mediterranean sea and suddenly appear in Rome. These books were probably supported and distributed by the Jews of Europe who were no longer loyal to the people back home (Who due to a years-long grinding famine had mostly become monsters).

Moveable type

Movable type should have existed in Roman times. Perhaps the bible was the world's first printed book in Roman times, as well as in Gutenberg times. Perhaps the Gutenberg bible covered up discussion of ancient bibles printed with movable type.

Christianity as matrix upgrade

Do you realize how utterly moronic Greco-Roman polytheism was? Could you believe in Zeus/Jupiter and Hermes/Mercury and their disagreements? What about how they might not hear you unless you used a priest who could precisely recite the most time tested legalese for getting the god to grant you what you need. Christianity was such a huge matrix upgrade for the Mideast over Roman religion.

Jesus is timed like an impersonization

Look when Jesus appeared, in the decades after the worlds dirtiest secret got out. So Jesus is certainly timed like an impersonization.

Why are there so many cryptic words in the bible?

Perhaps great goodness is the best mask for great evil.

Sacrament prayers upgraded by monotheism

In Roman times, one asked for help with plans, and to maintain good relations with the gods. In Christian times, that still happened, but one also exposed one's sinful thoughts. This is a subtle but important evolutionary upgrade to religious software/ideology as a tool of societal control.

Separation of church and state

One of the wisest aspects of the US constitution is this separation. And any fool can see this. So let me suggest that here we are wisest when we take the most absolute and total path, where we tolerate no mingling. Our government has no chaplains, no priests, no prayers. Minutes of silence, fine. Official words about the spirits, the dead living on the hearts of the living, fine.

We sacrifice to the de-ex-pull in many ways

1/ Cathedral airports are sacrificial
2/ Military spending is sacrificial
3/ Wars are sacrificial
4/ Giant glass houses are sacrificial
4/ A 6,016-lb. Chevrolet Suburban (with 420 horsepower) is sacrificial because a 1991 Ford Festiva (with 63 horsepower) weighs 1742-lbs. (6.66X the horsepower, and 3.45X the weight). And the Festiva is still a 5-passenger vehicle.

Heaps of incense used in a Roman cremation

Anything wasteful can function as a sacrament that pays money to Mideast Inc. In the case of Roman cremation incense, the estate of the deceased was said to be "Buying a stairway to heaven".

Bobos in Paradise

This crit book tells us how boomers love to sacrifice for status, but there must be a grain of utility in there. For example, the \$400 hiking boots should perhaps have the best traction and ankle support.

Transoms and transtrums

Both were this removable wood piece that goes on top. The darkness of night, is when the greater part of reality is imagination.

Selling one future and buying another

There's one set of mutual obligations being exchanged for another set of mutual obligations.

You've been a parasite for thousands of years. Now you become either part of your host, or a genuine symbiot.

What is Ishtar's shrink ratio?

How much of Ishtar's economic flow actually goes to feed hungry mouths, and how much is shrink? My benefits will mostly go to individuals.

He comes all the time

He comes all the time, but nobody listens. For his truths are all tiny, though vast. Like the individual beats of the drummer boy. It isn't really the truth that marks the new prophet has, but really that people listen to him.

Prophets

A great thinker/prophet doesn't necessarily show the right path. He can also show wrong paths, so you all can focus more on what is left.

God is so whatever, I can't even explain it

When I hear talk like this, I try to go 180° in the other direction.

Good vs evil spirits

Good Spirits are mostly sustained by the inherent synergy of men working together... and the synergistic benefits of shared labor. Evil spirits are mostly sustained on by parasitic feeding.

God-like or intelligent chimp-like

Loud boisterous partying is Chimp like, but it has its place, and it shouldn't disturb those sleeping in theirs.

How our thoughts will be god's thoughts

The conveyance, and weighing of individual thoughts to the network, and their proper weighing is obviously an initial step towards the god mind.

Christian hell

The Ishtar religion has a hell, just as surely as the Mafia religion. If you talk, or steal from either, you will experience this hell, a place you might be released from to frighten the others. So legends of a religious hell existed and they proved problematic until they were added to religions. Anyway, that's how I think is how the concept of Christian hell came to be.

JFK & Marilyn Monroe in the afterlife

Both of these people are thought about often. So they sort of live on in an afterlife. Now let's think about them eating lunch together. That to me is how people meet each other in the afterlife. It's happening in your head, not theirs, because they're dead. Thus the afterlife is a viewer oriented thing, not a subject oriented thing.

Pantheons and Christianity

Agrippa built the original Pantheon after the Battle of Actium in 31 B.C. So the secret got out at that time, and then due to this "book of revelations", most people with any brains stopped believing in the gods, the Roman gods. Or rather I think, as is vividly recorded in early Christianity, they realize that all of their gods are a thing of the devil (the de-ex-pull) in disguise. So after this revelation, there was this huge consolidation of Roman religions. Instead of having 50 different gods, there was only the one god of Christianity which tolerated the Roman gods at first.

Here we pause to consider three facts:

1/ Pantheism begins right after the battle of an-ti'um and the discovery of the Red Sea.

2/ Pantheism begins around 31BC, Christ dies in 33AD.
3/ The early Christians respected the Pantheons.
4/ It is not hard to imagine a meta-spirit being introduced and taking over from a widely ridiculed Roman Pantheon.

Today's matrix hackers Will be tomorrow's leaders

The blind prophet

On one hand he can see your ways sight unseen, as if he was one of you. Either that or he is a Spartacus sort of guy that everyone protects, and struggles to blind the world about.

The healing of prophets is not a magic touch. It is simply medical understanding that can be shared.

I keep falling for the matrix

I am always thinking that Trump, Pelosi, Kim, And Xi are real.

Pre-theism augurs backwards

In all pre-theist ideologies, people worship the past and past events, and fear what is outside the tradition of the past. Under post-theism people worship the future, and welcome things that seem likely to bring a better future and better future returns on their efforts. It is a much more practical religion.

Prophets brought down to earth

To my mind, a prophet is just a person comes along and says let's change a whole long list of things wrong with the world and all profit from this. A Cassandra is a profit that is not followed. Prophets are so valuable that even Cassandras, potential prophets should be given an audience (audi-hence). It is such a tragedy for mankind that so few people are able to grasp the overall picture.

Zebras

If the panda is a mellow, creature with sharp distinctions between black and white, Zebras are faster creatures, horse fast creatures, that have many more detailed distinctions between black and white. Thus zebras might symbolize a detailed and more well thought-out black-and-white conception of good and evil.

God thoughts

When the whole world thinks something together, now there's a god/good thought.

Sympathy for the de-ex-pull

This song should not be prohibited, but immortalized with understanding: So people understand that drinking and dancing should be kept as a part of our lives, but a thing that is fully grasped as detrimental, but enjoyable like sugar.

The skills or needs to come up with the message are fundamentally different from the skills one needs to spread the message

Pre-eutopian ideology

Goodwill Hunting vs. Walter

The world is not welcoming of fresh ideas like Robin Williams in Goodwill Hunting. It is more like Walter from The Dude in the Bowling alley scene

The god virus

The new operating system has already infected the group mind. Nobody can stop the God virus now.

I have already proposed

I think you need to leave your old prophets and come with me.

The universal prophet

The parasite's prophet ends the Arab struggle, and the host's prophet ends the fall of mankind, the idiocracy and the stupidity. It is really quite simple actually.

How many in your leadership?

The reason for putting people into the countryside is mostly to assuage the fears of the the host society. It is also to reduce the potential for communication and re-organization.

<kid learning to ride a bike>

Once you muster up you will not need me. The sum of your minds will then be smarter than mine.

In my own thoughts by nature

If you speak to slow, I will start ignoring your words (like when skimming text) and thinking about something else while you are talking.

Not sacred gospel

To the best of my knowledge these words came to me on long reflection and there is nothing divine about them. I heard no voices.

If you make me king of Thailand

I will promptly dissolve the monarchy and give all the king's property to the Thai people.

Religion name: "Convergence"

It is a world of people all hoping to eventually converge and live peacefully as one.

A real bible translations please

Can you guys produce a NIV bible translated for readability. This should be our starting point.

Stuck on earth

Imagine an advanced alien crashes on earth and is not able to leave or phone home. What does he do? He decides to help man with the advanced ways of his kind. So he tells people and nobody listens. Everyone he talks to cavils with silly objections that he has already considered and is fully capable of addressing. Everyone defers to supposed experts that he sees right through.

How come nothing is happening?

I feel so delusional.

Why Genesis 19 is so long

Most of it was added later to hide the original message about the two girls Sodom (s•hodos) and Gomorrah (G•an•ora) who had drunken sex. In a world of media by shared campfire stories, this was the part that nobody could get rid of. So they adulterated it as much as possible, adding a bit about destroyed cities as disguise.

A bias for people

Take this from the Christians. If you are going to have a bias, make it towards taking offense less easily, and towards forgiving people.

Is Saraswati a blid?

It looks a great deal like Sarah's•vat. Vati = prophet.

Rings:

How to move all the people.

How to end poverty and human desperation.

How to unify mankind under one agenda.

How to end war.

How to end the parasitic de•ex•pull, the devil spirit of man.

How the world will end in another ice age.

How to build a democracy that will serve as an incipient god mechanism.

How to reverse the devolution of man.

How to commence the recursion, the meta-flux.

How to crash the matrix & stop lying to ourselves.

How to understand br•peh or Bro•lingo the matrix label language.

How to get the ancient books of Alexandria released to the web.

The little drummer boy of myth

When the true profit comes, his message will not be one super-profound thought, but like the little (big) drummer boy of myth, he will sound out thousands of truths forming a new tempo/ temple/ religion.

The whores of baby•al•one

It is the harems and their best•ard sons.

Great prophets don't have one great truth...

They have many smaller ones. In fact, this is what the drummer boy of myth is about. He drums out one truth after another to create a whole new temple/tempo.

Let me show you a few awful things that will simply die on contact with light and truth and open discussion about their existence.

The message is important, not me

Don't focus on me too much

There is no rush

You will all come to me eventually and abandon all your prior prophets. And I suspect that given human nature, many of you will be conflicted, and it may take 80 years for it to happen, but it will happen, and I will eventually win the game completely, leading you all away from the corrupt and silly pre-theism towards a religion actually dedicated to your future.

A major software upgrade

There is going to be one hell of a learning curve, and certainly lots of bugs and security issues that will have to be patched, but most features of the new software will work.

Prophet or lunatic

When I would tell people the parts of my message, most would shrug, some would call me crazy, or a fool, and some would get hostile.

The lightyears, the light century

This is a good name for the recursion/ singularity. The first light years... the 3rd decade of the light years.

Don't get distracted by the extraneous

If you are looking for something in my life that caused my message, I can't identify it. My message is simply not something that came from any particular experiences, and no experiences other than having a rotten childhood did much of anything to bring it about. I mean, having lots of time to think and ponder the world was definitely a big component, but that is all it was.

Repentance is a group thing

Repentance for individuals is a silly and worthless sort of thing. However for cities and nations and religions it is real, believable, and valuable, especially when they repent that they have been following a demon in disguise: "We all really didn't understand. We repent. None of us want to work for Ishtar any longer. We all swear off Ishtar. We are sorry and beg your forgivingness."

Pre-theism

Don't underestimate the corrosive power of this word. No pre-theist religion can withstand it.

Fate

I don't believe in a pre-existing god, so I also do not believe that life is pre-determined in any way at all. I also do not believe that the future can be seen except through the study of past events and by means of measurement and extrapolation... which of course presume continued trends.

The Rastafarians are right

I am a bit of a Rastafarian in that I use ak•ana•bouche =point•new•say for religious reasons. To me, whatever I am doing while high/elevated, I will grow in that way. If I am listening to music, I will think about songs that help nobody. If I am being social, I will become more social. So what I do is read serious material and write when I smoke, thus I grow in that way.

I need grass to see

I make most of my great breakthroughs on grass and coffee. I get high and then the mn•Gs just come flooding out as fast as I can write them. Also, I can sit down and write for 14 hours a day when I smoke. If I don't have it, I keep getting frustrated and constantly stand up and walk around the room.

Distracted by my thoughts

I have always been distracted by these thoughts. It makes me distant, like someone with their mind always somewhere else.

It bears repeating

There is no easier way to do right and to see what god is than to study the devil, so you can do the opposite.

How many times did you mess with my life?

Mozart clip

I am unrepressed like him by nature. And the reason why Arab women are not supposed to discipline their boys is to make them less repressed and more like Mozart.

It is just a starting point

My constitution and my rules are only a starting point. I do not claim to have the perfect and eternal truth straight from god. I only think that I have a better understanding of what it takes to make the pro•men•thean spirit thrive. I would encourage communities to experiment with tweaking my rules.

I didn't write my message as king

I didn't really put all the pieces together until after I was almost totally finished with my work. I wrote this work as a ignorant Rumi, as a man of the host part of mankind. I didn't realize that I was the chosen as ali•z•ard king, or omega man, the smartest of some generations. I didn't

realize that I had a golden arrow. After reading enough history, I realized what I was dealing with and got careful.

Leaders and the press

Leaders should not be answering on the spot questions from the press.

1/ It hands away too much power to these unelected people.

2/ It unnecessarily hangs this nasty specter on public service.

3/ Journalists should have to publish their questions in public, and the public officials answer them in writing or on video.

A prophet, not a god

I don't claim to be as god, but only to know what a god spirit needs to be strong. I only claim to see a bit earlier and from a loftier vantage point. I only claim that nature put me in the crow's nest, able to discern the the distant shore before others.

I never cared to inherit the chocolate factory

That is apparently one reason why you picked me.

I don't want wealth

I already have more money than I can use.

It's a huge risk

There is certainly a huge if not unlikely risk of taking my path. However not taking my path offers an even greater long-term risk of your annihilation. Also, not taking my path would reveal that the only justification for what you have been doing is a lie, and that you are nothing but a bunch of thugs.

My path does benefit you

1/ In 12 years, you will all be free of Ishtar.

2/ Everyone will be better off materially once we shift to output positive policies.

3/ You will no longer be evil.

4/ The world will stop despising your people.

5/ As fast as they can restart economically, your people will be better off materially.

What word shall I use?

Parasite, cancer, disease, mafia, crime family, tick leach, flea. Does anyone have clearer terms than parasite and host?

George Henry Lewes

["It is not by his faults, but by his excellences, that we must measure a great man."](#)

La Rochefoucauld

["Great souls are not those who have fewer passions and more virtues than others, but only those who have greater designs."](#)

Voltaire

"It is the destiny of great men that their superior genius always brings them defamation and envy." [We must engineer this out of the system. Then more men will struggle harder to serve the common good.]

My church

You don't do service to my religion by idly praying, or sitting listening to men interpret my message. You do service to my religion by earnestly participating in my democratic god mechanism, and by respecting, favoring and helping those who it elects. This is how we cooperate to go upward and become more god-like.

Everyone has corrupt traditions

Everyone's religious traditions were edited by Ishtar to further the cause of Ishtar, even the chosen Haremi worldview. Whatever religion or ideology you believe in, it has been corrupted by Ishtar: be certain of that. My message is not corrupt. Hopefully, I can get everyone to throw out the old corrupt religions and follow my new incorrupt religion. Hopefully, I can unify the world under one universal religion for all, with everyone going in the same direction.

As my message spreads

It petrifies and kills Ishtar on sight. You are passing around the mirror shield of br•see•us.

<https://www.youtube.com/watch?v=IUTZmSyDErg>

Brawndo's got electrolites

I feel like this quite often when I talk to people about their matrix beliefs.

Appeasement religions

I don't think people really grasp how easily appeasement religions can be inched into a Mafia protection racket. In other words: You had better sacrifice, or the mafia secretly affiliated with the religion will sabotage you at some time in the future.

Confession and enforcement

So many Catholics truly believe that one must confess their sins in a one-on-one confession of everything and anything. This makes the Catholic confessional ideal for gathering information for another arm that is harming those who fail to appease the gods.

Mafia in robes

Once you are killing people, it really is nothing to pretend to have the low-down on what god wants.

Freedom to practice appeasement religions

When is it a protected religion and when does it become a Mafia protection racket? Certainly if they threatening people, it is a protection racket. But what about when they

are all supposed to project totally deniable ire the way Islam does? Should that sort of appeasement religion allowed? If you join us and convert to Islam and join the family, and appease us, then we stop inching against you. Should that be allowed? Is that fair? Is that a peaceful religion? Or is it the most peaceful evolutionary form of a religion that is fundamentally about conflict and a life where there is never enough until one has spread into another culture?

Religions are not measured by their best, but by their worst behaved

Religions must be harmonious

The freedom of religion is based on an assumption that the religion is peaceful and can live in harmony with the other religions when the religion and its followers do not get its way. Religions that cannot follow this rule should not be considered peaceful religions but violent cults.

Words

subterfuge = sub•terra•eff•oo•geh

It is an underground shout nest-egg smart.

Differ, difference, defer & deference

To **DIFFER** is to have a different idea

The **DIFFERENCE** is the gap between your conceptions

To **DEFER** is to go along with the other person's way

DEFERENCE is a sort of pre-repect for the other person's ways. You have seen that they are a smart person and you respect their decisions and will go along until you see contradictory information otherwise.

Rhyme, and rhythm are blids

The true meaning of these words is resonance. It's the strangest darn thing the way our word for resonance refers to two fatuous things, And not the important thing, resonance of meaning.

PEloponNesian INSULA = PEN•INSULA

Pins, pens and pene = tubes or conduits. Penis = tube, conduit. So is Peloponnesian a mangled and altered word? It certainly is a remarkably long name for a place. And then there is the way that classical grade school latin dwells over and again on the insula/peninsula distinction. Maybe the Peloponnesian peninsula was once just the Pene•insula, the tube island. And maybe the flock minders did not want this knowledge to get out in the wake of the Bronze Age collapse. So they added letters to the name so it was no longer the **PEN•INSULA** to the **PEloponNesian INSULA**.

The word PEN

Perhaps a pen-knife is a syringe. And a penalty is about getting PENis in prison. Pending = in the tube/process. A

penchant = a tube/rut. The pen•dulum = the tube•slaves and their offspring. A pen•dragon is a tube•troll. To penetrate is go go by tube. A pen•gu•in is a tube to the G•oo•in, a harem breeding bird at the rookeries (our•oo•ak•ouries). Penicillate is forming tubes, not hairs. Penn•sylvania is a safe tube through a dangerous wilderness. Penny ante is a small anti that leads to a tube for wealth. Penny royal is a tube royal, a front man. Pensive is a tube for thought. Pin feathers are the opposite of pen/quill feathers. A pine tree has pen shaped leaves.

Ignorance

This word should mean ignore•hence, or de-fixation. The word should mean the opposite of fixating one's attention on a matter. It should not mean not knowing.

Double cross = an 8-pointed star

Italy and Israel

These will lead the program for a universal gesturing language. The deaf may make suggestions, but this is primarily a program for the hearing to communicate more emphatically, and quieter.

Jesus of Nazareth

It is Nazir•eth = consecrated or separated•shout. So Nazareth actually is instructions to shout that Jesus is consecrated, Con•sacred = with•sacred

Euemi poly-tonals

They should be for subtleties, and the basic language should be mono-tonal.

The People's Liberation Army

It is Orwellian doublespeak. The real meaning is the **People's Enslavement Army**

Eye-eye = I see it just like you see it.

Sub-minimized

You know how what's app has the big window and the small window and sometimes there is this sub-sub tiny window like a micro-icon. That is sub-minimized.

Gay pride

The word gay is a propaganda term for infidels, to glamorize the homo lifestyle so that there would be fewer infidels. It is just another form of onanism for infidels, like the limitless sea of free porn on the internet and television.

Kinder•lust = the desire to reproduce

Pro•verbs = favorable•words

So Anything Called a proverb is actually a sort of propaganda.

Ongoing improvement

Westworld is a blid

It covers up the idea of the western world being an illusion or amusement park full of robots that look like real people.

Wicked

This word is about harmful propaganda and how it gets wicked up, licked up

Written in stone laws

This I think is a myth•nomer, and an intentional myth•direction. No laws, except the most basic about hurting others should be written in stone.

San Diego Padres logo

Is this a blid for Catholic priests with clubs? What about friar tuck and his staff. Are these the same thing? They were all bald (real or not) so they seemed old. And they walked with a stick apparently because they were old. So it was completely unexpected when they whacked you. In fact, they could probably use misdirection like in the film "O brother where art thou". And if nobody is looking, they could say that the other guy keeled over and hit his head. Also the name tuck in Friar Tuck has a meaning. T•uck = you•downfall.

Whole wheat

Talk about branding. What could be more wholesome than whole wheat? But don't believe it. Wheat bran isn't healthy. Excess consumption of wheat bran and even the other parts of the wheat are grueling, like the dinkel gruel they tortured the prisoners with.

Oedipus Rex

Oedipus Rex comes from odious rex (hateful king). And this was the greatest play of free and democratic Athens. Look at what it was twisted into.

Helen of Hellas

Paris of Persia did not steal a woman named Helen of Hellas (Greece). Instead Persia stole/ruined Greece itself.

Monobiz = one time commerce

Multibiz = a repeated business relationship

Mono-biz ratio = The percent of customers that don't come back for more. This should be reported for all businesses.

Annobiz ratio = the number of people coming back for more over more than 1-years. So the recorder will have accessible versions of this.

Avg. daily transaction-volume

These numbers might be all that is needed and all most people look at for say restaurants.

Sit a spell = sit'a speil?

Hempomaniac = someone crazy for marijuana

Why doesn't précise mean pre-cut?

International distress calls

AHHHH = Need help

AHHH OHHH = Need urgent medical care.

Frankfurt = frank•ford = where the fording stamps/franks were paid.

Punctuation shortcuts

zx = period space

zxx = period space space

zc = coma space

zcc= comma space space

zq = question mark space

zqq = question mark space space

zh = single hyphen

zhh = double hyphen

zs = default currency symbol

ze = equals sign

Grievous injury

Imagine a metal serving plate hammered to fit the front of your shins or forearms. That's a grieve. So what is a grievous injury? Isn't it a sort of stab in the back?

Screwing it up

What a great term for slowly lifting an idea. It's just remarkable how it means the exact opposite. Is this by accident?

Crazy is a blid for cracy

It prevents us from using crazy as a particle to talk about rule/government.

Goody two shoes

This is a person who goes around on foot doing good. Who made this great term derogatory and childish? What force made it go away? The same force that brought us Shazam.

Teenagers is a blid

The real te'un agers are up to about 12. This is when the kids will obey. After puberty, their own minds, and rome-hences (imagined or real) takes over. Also, note the age at which this juvenile period is extended in our minds. The juvenile period starts at age 13 when people become able to reproduce and lasts until they are 19. That is 7-years of 28 where females are fertile, but culture says: "you are still a teenager. You don't know what you want or need and you must not have children.

God•ard

The rocketry innovator, the rocket to heaven guy. He has a name looks like a blid.

Chronicling not journalism

Let's use the right word for what these people are supposed to be doing. Its Chronicling, not journalism.

Sigmund Freud = figments•oied?

Lezbian

I guess it is an ali•z•bian, a downslope life form.

EAR•i (said like eerie) = something you hear that makes you feel a certain way.

EAR-LY = sensible, reasonable, having common sense, trusting one's own perceptions, able to listen and focus.

LISTEN UP

This is what one person says when calling a group to listen.

GOODLY = being honest and fair with your money dealing and with things that don't belong to you.

a **BADAFI** = a government that is belligerent to the outside world until its leaders get hit.

Pay it forward

This is responding to someone's kindness by being kind to a third person.

Why they call it a fare

The money you spend to get there. It is harder to say it is unfair if it is called a fare.

Weir and weird intersected

A weir is a low dam that raises the upstream water level a bit and provides a choke point for netting fish. Weird means caught by the dam, or damned.

Silver lake

Maybe we will find a lake of silver somewhere east and north east of downtown Los Angeles. We should at least look.

Cis gender identity and sis(ter)

This word exists so that lesbians can more easily taunt their "friends" to try it.

The glass slipper of Sin•dar•ella

It is the glass that is broken at a Hebrew wedding

The intersection of kings

Rain = the water, the liquidity, the cash.

Reign = the ropes to steer the horse.

Rey'n = kinging

Taught

Intersect the meaning of this word. On one hand it is the past tense of teach. On the other hand it is a line pulled and held tight. Here perhaps we understand the true meaning of teaching if it's past participle is the same word as a taught rope.

I was sent here, listen to me

Was this is the origin of the word sentir.

Dyna•s•ty= change•you•not

Dino•saur = change • lizard

Demo•cracy's = change•rule

A **DRAIN THE SWAMP** situation = a situation that will continue to fester and cause problems forever until people say, "ok, this is going to cost a shipload of money, but nonetheless we have to end this huge problem.."

Wild Beef = range fed

AD-LIB & LAB•OR

Lib = book, Lab=talk. So AD LIB is the opposite of improvisation. It is reading from a script. And LAB•OR = talk•mouth, not work. LABORATORY = lab•ori•Terri =talk•mouths•earthlings.

Bijou flats = small, perfectly designed and furnished units that are immaculately clean and close to transit

Clothing = kal•oathing

apo•phenia = the tendency to see relations, even false ones in unrelated things

Apo•dictic = the opposite of Ad•dictive

BAHN•MIGO = going along with the main mental highway.

HEMANT = Hindu Indian winter. It's a place that most of the year you can get by in shorts and flip-flops, but the winter nights get quite cold.

RAMAYANA = a renewal into many paths

How to eliminate words

It isn't by official edict as the ministry of the French tongue quacks each year. It is by adding a new meaning that creates confusion or embarrassment that punishes all who use that word.

Decimation

1/ The true meaning of this word is when only a fraction of the people survive.

Alice, Alyssa, Lisa

All mean towards Issa = Jesus

Also the Elysian Fields may be the root of Jesus.

Belissima = beautiful•Jesus•mother

May be this is where the whole -issima suffix came from.

Cairo•solemn

I wonder if Heiros comes from Cairo, which was probably sacred like Jerusalem = heiros-y-solemn.

"No, that is wrong. If you want to go to Cairo•solemn, you take the right fork at the top of the blood Red Sea."

Frugal

eff•our•oo•G•al =

shout•our•nest-egg•big•towards

Euemi

What a thing that will be when everyone on earth speaks the same language. Think of the anti-war implications.

Lemuria/lemurian

This is a good name for the slavery of the Middle East. It's a reference to the walls and barriers physical, cultural, and mental used to keep people locked in a hellish land of oppressive conditions. The hellishness was designed and intended to motivate the harem slaves to leave and remember the poor souls back home when they did. The hellishness helps on both counts.

Wanderlust

This is the lust lust to travel and explore to go down that road just to see what's there this is the desire to talk to new people and learn new things. It's the lust to roam around in the library and find something interesting. And if you can key into it, you should let it lead you around in your learning.

Just•in Beaver

His name is a blid for the fresh prostitutes.

Dumbbells

These are Quieted bells, Where the tongues have been joined. These were the cheap bells, the expensive bells were made right, but nobody could afford them.

Pyrenees is a blid

It covers up fire mountain or fire rebirth.

Gallant = gal•n't = no gal, So he's very courteous to the women that he meets.

Tryanny = total parasitic control

Meta-symmetry

This is sort of a recursive similarity between the layers.

Intuitive names

We should go through all all human knowledge looking for non-intuitive names. Then we should replace them with names that people can guess what they mean. This is because these non-intuitive names, and counter-intuitive names are perhaps 5 or 10 times harder to learn than intuitive names. So by merely changing the names of things we might make our kids smarter.

>>>>

Also, It seems that most professions are full of this sort of junk argot nomenclature That makes it harder to both enter the profession and to Effectively judge the value of the people working in that profession.

Zenadoo

Maybe This is a better name for the world's crossroads near Volgograd.

Deja Vu

This is French for when you keep seeing the same thing over and over again, like Ishtar's tricks. It's a great word for sensing that there's a pattern occurring.

Aab•ott and Co•s•tello

Ab•ot = from•ear. Co•s•tello = co•not•tell•not.

Morals/murals = moor•als = sense of obligation to the desperate people of the Mideast.

What a hooker is

It's a woman that hooks a man by giving away sex. It isn't a prostitute.

The atari logo

It is a blid for the nuclear reactor solution, to make the shape go away.

Cathection = to invest emotional energy in something.

The discoverer of silk

Like sin•dar•ella = no•give•she, Lady Hsi Ling Shih sounds like see•nothing•she.

Peri-graphs

A paragraph is a block of text next to, or around an illustration.

The UK drawl

It's a regional drawl. It sounds nicer, but it's a drawl, a slowing down with extra tones.

Amsterdam = anster•damn, damn ansters, the damn fools that came back after the flood.

Blue collar = pull•oo cal•our

These are the people rhat the Middle East oo is able to trick into going c•al•our = pointing•to•us. White collar people don't do this.

The seas and Caesar

Both words are related to seizure by pirates.

Iterations

Iterations aren't different things, but different paths. Iter comes from L. iter=path, from it=that + terr=terra=land/terrain. Also iter is related to other, because it is a fork in the road sort of word.

Roman blood sports

This was hacking people to death in a ring for entertainment and to strike fear into the hearts of the viewing public.

Blood sports

This is the new name for violent sports that are likely to injure the players. Examples are: boxing, MMA, headball, rugby, vehicle jumping and downhill racing.

Spies

Spy is a blid for a great word for a person who can see far ahead. And note the bad and cowardly connotation. The word implies that good Americans should not be spies. In fact, spying is one of the greatest advantages of our diversity. We can infiltrate any nation on earth, because we are made up of people from every nation on earth.

R-naught

It should be a more intuitive name like RR = reproduction rate.

Sport's car

Sports utility vehicle

What is sporty about cars? Cars are for lard-asses.

Pandora = the muse of public opinion, which the Mideast worshipped.

Meta-knowledge = useful meta stuff

Philosophy = useless or hard to understand meta stuff.

MURRAYEDThe act of receiving negative consequences by taking advice from slow or dim-witted friends and co-workers. To be mistaken as an actual threat while in costume and being erroneously killed. As in the movie Zombieland.

CYBORG

In the context of excess systemic authority, a cyborg is a worker that is too blindly following his rules and directives.

AirBNB is a blid for ArabBNB

It Implied the network and was covered up with this website

Sentinel

It is from Italian: senti=listen + nel=in, into, inside. A sentinel is a spy, or a guy on the inside.

Omnipotent rulers

O•mini•potent = No•ideas•strong = weak minded

O•mini•bus= No•ideas•say

Japanese **Shokunin** = mastery and pride of craft

Are citi-ZENS related XENO-phobia?

If so, then the original meaning of citizen was actually foreigner. And forei•gner looks like outsiders•black. And sub•ject = under• throw. In•habit = inside•habituated. Denizen = d'ini•xen = of•ini•foreign. Local = al•och•al = to•look•for.

Mestizo = mesti•zo

Mixed with the animals

Violence = Via•al•hence = rout-to•hence

So the true meaning of violence is a thing that perpetuates itself.

Holland = hole land

If **Dieno•saur** = horrible lizards, then isn't **Diemo•cracy** = horrible government?

Auspatent = a thing once owned, but now free for all.

The Dutch word for real estate

on•roer•end go•ed.

on•roar•end go•learn

Portugal

port•u•G•alia = your port of big pain

Leviticus

lev•id•ick•is

raise•idea•yuck•us?

The crime of saying things for foreign governments

Eunuch & Unique

eu•nik = good•person

Shamrock = sham rock

This is a term for the struggle. They are looking for a 4-Ali-eff Kal•lover = 4-pointed Christians that will help with the sham•rock, the "pull•our•nee stone".

R•ace= our point

Hocus pocus = oak•us peh•oak•us

Perspicacity= Peri•spec•a•city

Pepto bismal = peh•ex•peh•to + bismillah = say•out•say•te•no + in•the•name•of•allah

Bri•G•ham young = bro•G•man young

Japanese Rakudo = r•ak•oo•do = our•ak•oo•dar = our•ak•nest•egg•give. It officially means the way of the Camel.

The gospel = the go•speil = the company line

Cliff's Notes = Califf's notes

Os•m•os•sys = mouth•think•mouth•with

Psych•otic = soul•eared = Someone with a sole that can be molded by what they hear, like perhaps Mark David Chapman, killer of John Lennon. Anyway that's how our definition of crazy intersects with the Greek-speaking brotherly version of cracy=rule.

Con•jecture = with•toss = throwing an idea out for group thought.

Extolled = Ex•told = Told so it gets out and about.

Nike/nique = victory

Mo•nique =one of a victory

Eu•nique = of a good victory

Dis•nique = of a bad victory.

Victoria's Secret = victorious secret.

German: Schmetterling = butterfly

It is Sch•matter•ling= not•mother•person.

Sh•mata = non•mother.

William the protector

If William = protector, then wasn't William first called William the protector before he was called William the conquerer?

Dynasty= worse•you•not
Dinosaur = worse•lizard
Democracy's = worst•rule

Lee Harvey Oswald = Ali•harbi Os•we•al•de

Kama sutra= Kama•sudhaa = Eros=nectar

Legs akimbo = legs ak•in•bro

Enigmas

an•ig•mas = continuing•ignorance•more

a **TRUE-STATE** = Something that is obviously true but someone still needs to say it.

CTD = circling the drain

TRONIX, TRONICS = The union of machines electronics and computers.

Amazing is the stupidest word

- 1) It has 3 syllables so this important aspect of positive life is hard to use.
- 2) It should be a single syllable that can prefix and suffix to new words, so our language can be more dynamic and uplifting.

ETAH = Hate spelled backwards, another word for hate.

William Faulkner

If Sir•va•antes and Hawthorn are not real what about Faulkner?

Godiva = god•iva

The goddess of progress, advancement, and hard work.
This should be a common dictionary word and there should be no brand protection afforded.

Geneva = G'n-ex•va

to **PRIMATIZE** = to treat a secondary consideration as if it was primary.

MENTAL MYOPIA = a failure to see the big picture.

CIENAGUA = A places that suffer from tsunamis every so many centuries.

NT = Natural thought = Ideas that spread on their own.

AT = Artificial thought = Ideas that were propagated either with ads, or marketing, product placements, touts, actors, or by some artificial means.

Electing new words for Euemi

Let's get worldwide collective intelligence involved in the selection process for new sounds and new words. And let's all elect the best words, and the best meaning organization systems. Let's start the meaning organization while we increase the number of individually recognized sounds we teach our kids to hear. Let's develop both at the same time, then before we are finished, let's go back and add the new sounds. I think this going back will improve the results substantially.

HARLOT = our•al•ot

Isaiah is also spelled as Isaias = Isis and Shay

Mus•co•gee = mouth•co•G

Apalachee = a•peh•al•A•key

Trans•sylvanians = across•woods

They were the scary people who went through the woods on foot.

Ham•burger = man•burger

It doesn't mean it is literally made from people who were eliminated, just that it could be made of that.

a **SHIF** = a slimy type that will lie through his teeth and do whatever it takes to get some monetary or political advantage.

Gr. Plasma = something molded, cast, formed, shaped, or fashioned.

Gr. Platos = broad, wide, flat, enlarged, or spreading. So Plato's name has this connotation.

Gr. Plegma, pleko = things woven or braided

Gr. Pliestos = most, very great, much

Humor = eu'em•or

Human = eu'em•un

Gr. Thusia = sacrifice, sacrificing, the creature sacrificed
Enthusiasm = The buzz of hashish, attributed to the gods.

Thursday = Thus•day

Tuesday = another Tus•day (so there can be two days of sacrifice, along with a sun day, a moon day, a wedding day and an eff•ouri•day for sir•mns=ideas of the sirs. So you see the days were named to encouraging more sacrificing.

Refuse = re•thus?

Mal•thus = bad•sacrifice

Thus far = thus far.

Thuc•ydides = sacrificial ideas

Tuscany = thus•cane•A

Latin Reges is plural for L. Rex=king

REGISTRATION was letting the king's administration know.

REGALIA fancy stuff that surrounded the king.

REG•ARD was a king's man.

a REGENT was a reg•n't.

REG•GEH music was smart•king, or the king got smart and listened to the soft, easy, and groovy music that perhaps involved smoking marijuana.

REGION = what the reg ruled.

REGISTERED MAIL = the king's guest mail.

REGULAR = to the king's standards.

QUAINT = ak•oo•ain't

This is the opposite of what's good for Ishtar.

GRAND = g•our•an•de = big•our•new•of

GLORY = g•al•ori = big•to•mouth

POMP = Peh•on•peh = say•on•say

SPLENDOR = s•peh•al•end•or = not•do•to•end•talk

PSYCHOLOGICAL is a blid for cycle•logical

DUMBSHIT = a blid for dumbish, a really useful word for heading down towards dumb.

Rectangular and rectilinear are blids

They are supposed to sound like rectum, so people don't use these useful words.

"Get the lead out" is a blid

It hinders discussion of lead paint, lead plumbing, leaded pewter, lead wine bottle caps, leaded gasoline, and lead fishing weights eaten by fish that eventually get eaten by humans.

Hilton hotels

It is a blid for those really nice Hill-town hotels.

Add-ul•terr•ation

This is when the Arabs add to a message to dilute its original meaning.

PUG = Property of UM government

All the development aid will come in the form of standardized UM development systems, and not much money. All these systems will be easy to identify and it will be a felony everywhere to be in private possession of any PUG.

Some Chinese words have too many meanings

In Euemi, we should strive to have no more than a few meanings per word.

Fake things with two confusing names

Psychiatry-psychology has two names.

No idioms or style words in serious media

By the skin of his teeth = barely survived

Belly up = bankrupt

Cairo

Kairos = critical, right, opportune, moment and Kyros= lord, ruler. Also Kronos is possibly a blid of kairos, for ancientness is an aspect of the spinx. So is Krios = lord, king (another related word possibly)

The sound and feel of Italian

The sing-song aspect of Italian, the engagement with the listener, the gestures, that is how Romans were.

Gr. ops = voice

REDREAM = To dream that you are awake

Ladino is the language, Latio are the guys. "Alla-di-no?" "Alladin-no?"

String theory

It is actually a blid for a political term

Miscalculation

What a useful term for misunderstanding the true scale of something. Strange how it now means something fatuous like a failed bluff.

Lisa = al•issa

Offensive names

The Senate may change the name of any fictional citizen or group amenity it wishes. A great example of this is the hotel Adolphus finished in 1936.

Saturnism Saturdays

Saturnism is the old word for lead poisoning. **Saturdays** are famous for sleeping off one's hangover.

a **Satyr**id is a butterfly, perhaps the satyr•rid type that parties it up on Friday nights. and suffers from a saturnism Saturday hangover.

Saturn•alia was the Roman festival of Saturn in December, the predecessor of Christmas. It looks like Saturn•pain in Greek.

Saturation might be related to poison absorption.

Saturated fat might be poisoned cooking fat.

a **Saturday night special** = a deadly micky in someone's drugs, not a firearm.

Satir•ic•al = poison•downward point•towards.

MAN•ZEES = mankind of a past or lower evolutionary state

MAN•AVES = mankind of a future or better evolutionary state

Baritone = bare tone, one who sings the truth

Talus pika

The rodent meaning looks like a blid. In Greek Talus=heel bone, with connotations of the Achilles tendon being nicked into an Achilles heel = ak•illi's heel. So a Talus pika looks like a heel•pika. Now pick=to take from, to take in small amounts, to select, to select from alternatives, to provoke a scab to bleed, to irritate into an altercation, to pluck at the strings of an instrument, to pick pockets, and all of these meanings seem related to Arabs having their Achilles heel nicked. Also the instrument for doing this seems to have been called a "pick" or a "pick aks". Also the feeling of the tendon ripping was called Sp. picante or Fr. piquant meaning picked•antes, or picked before. In Portugues, pika =injection.

Picaron = peak•Aaron

These are the smart Aarons, and picaron means wily or crafty in spanish, or a crafty devil, or a wily devil.

Trade used to mean food

MANGIA is how Italians command each other to eat. The French word is MANGER which sounds very close. In English, a MANGER is either an animal trough, or where Jesus was born. And all of these words seem related to the Latin word MANGO = merchant/ trader. Also, we read about Rome's dependence on imported food. So it seems that the word for import-merchant became synonymous with food. In Iberia we see how in Spanish and Portuguese the word for eating is CO•MER = with•sea. Here we wonder if the German word Essen was once more like East•in. Russian YST sounds like East. And so does English EAT sound a bit like EAST.

Singapore's four names

Iskander, Temasek, Jahor=J•por

Gender-mandering = This is when government and NGOs help kids to feel like they will be more popular or more liked if they are not heterosexual.

Deja Vu

This is probably from dei•jah's view, or the god of the Mideast (Jah's) view.

Permanent group thoughts = ideas that manage to get out into the group mind.

Fleeting group thoughts = ideas that fail to get out into the group mind.

Flabbergasted = blabber•gasted = talkers•frightened

Gullible

I wonder if this word comes from golo•bible = swallow•bible.

Schlep = sh•al•ex•peh

Cow•ard = cow•man, a follower

Bull•ard = a foolish and aggressive man

Sheep = shi•peh = silence of the lambs

Don•key = key wise man

Do•ve = do•we, our way

Pidgeon = peh•id•G'n

Goat = G•ot

Mule = M•eu•al

Horse = our•se

Hunger games

This is a blid for the sort of games people play to make others hunger for them.

Those people named

Current Real world names had to be named, because the names change with each generation. I am sorry if I have falsely accused some based on their name. Nikki Haley for example may not be an agent, I am not sure. It is just that her name means "Victory Ours" in Brolingo and she was in a powerful position.

spingire le luce

This is how to say turn on/ off the lights in Italian. This is from sfinge = Sphinx

Flying carpets

I bet this has mostly been about people rolled up in a rug and carried off. But on another level can also be a metaphorical tapestry so grand and so rich that it carries your mind away.

Ergo•nomic = work•division = division of labor

Ergonomics should be the study of breaking up and facilitating work, so it is easier, or faster. It's also the study of making tools handsome and deft. It's also the study of making communities that are denser and less work to reach. It's also the study of taking real world activities and doing them remotely via the Internet.

Bloody Rottweilers

The big and ferocious dog breed is a blid for the term Rot•weiler=bloody•villager. This is one of the big local dogs dear bro that you want to stay away from because it may come to blows.

Res Gestae = guest rex

Res public = public rex

res spect = look-at rex

res solution = rex's solution

res ipsa loquitur = rex speaks for himself

res judicata = rex judged

res urrection = rex erection, to hold up a king

resource = rex source

resume = rex•you•me

resplendence = rex splendid
